*Text highlighted in yellow indicates that the material is new or substantively revised.*

**201.1 OVERVIEW**

Effective Date: 10/28/2020

The Program Cycle is USAID's operational model for planning, delivering, assessing, and adapting development programming in a given region or country to advance U.S. foreign policy. It encompasses guidance and procedures for:

- 1) Making strategic decisions at the regional or country level about programmatic areas of focus and associated resources;
- 2) Designing projects and supportive activities to implement strategic plans; and
- 3) Learning from performance monitoring, evaluations, and other relevant sources of information to make course corrections as needed and inform future programming.

Program Cycle implementation also facilitates USAID's compliance with many requirements of the Government Performance and Results Modernization Act of 2010 (GPRAMA), the Foreign Aid Transparency and Accountability Act of 2016 (FATAA), and the Foundations for Evidence-Based Policymaking Act of 2018 (Evidence Act).

**201.2 PRIMARY RESPONSIBILITIES**

Effective Date: 10/28/2020

- a. The **Administrator (A/AID)** formulates and executes U.S. foreign assistance policies and programs subject to the foreign policy guidance of the President, the Secretary of State, and the National Security Council. Under the direct authority and foreign policy guidance of the Secretary of State, A/AID serves as a principal advisor to the President and Secretary of State regarding international development and humanitarian assistance matters. He/she administers appropriations made available under the Foreign Assistance Act (FAA) of 1961, as amended, and supervises and directs overall Agency activities in the United States and abroad.
- b. The **Bureau for Foreign Assistance, Department of State (State/F)** serves as the U.S. Government's foreign assistance coordination hub, leading the coordination of U.S. foreign assistance. It advances U.S. national security and development objectives by strategically managing State and USAID foreign assistance resources; leading coordinating policy, planning, and performance management efforts; promoting evidence-informed decision-making; and directing State and USAID foreign assistance resources.
- c. **Operating Units (OUs)** implement foreign assistance programs with funding from relevant foreign assistance accounts. OUs include USAID Missions and USAID/Washington (USAID/W) Bureaus and Independent Offices (B/IOs) that expend program funds to implement activities to achieve foreign development objectives.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

**d. Bilateral Country Missions** serve as the focal point for USAID programming in the countries where they operate. In collaboration with USAID Regional and Pillar Bureaus and the Department of State, USAID Missions are responsible for the design and management of development programs. This includes monitoring program and financial performance and routinely reporting on results.

- Mission Program Offices play a leadership role in Program Cycle implementation under the direction of the Mission Director. This includes facilitating cross-team collaboration to ensure that multiple perspectives are brought to the planning and design process, and that all relevant actors fulfill their implementation, management, and reporting responsibilities.
- Mission Technical Offices provide technical leadership in Program Cycle implementation under the direction of the Mission Director.

**e. Regional Missions/Regional Platforms** manage regional programs and, in some instances, provide USAID Missions with administrative support services—such as legal, financial management, executive management, and procurement—as well as limited, specialized technical assistance and/or program assistance when client Missions have limited full-time equivalent staff capacity.

**f.** The **Bureau for Policy, Planning and Learning (PPL)** is responsible for ADS Chapters 200 and 201 and, as needed, provides interpretation of the language in these chapters in collaboration with the Office of the General Counsel.

**g.** The **Bureau for Policy, Planning and Learning, Office of the Assistant to the Administrator (PPL/AtA)** provides internal and external leadership on USAID’s development Mission by shaping Agency and United States Government (USG) development policy and promoting good practice.

**h.** The **Bureau for Policy, Planning and Learning, Office of Policy (PPL/P):**

- Leads the Agency in a collaborative process of articulating policy and producing policy documents in order to guide programming decisions;
- Informs external audiences about Agency direction;
- Inserts development perspectives in foreign and national security policy formulation; and
- Represents USAID within the development community.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

**i.** The **Bureau for Policy, Planning and Learning, Office of Strategic and Program Planning (PPL/SPP)** establishes and oversees the implementation of policies and procedures for USAID Missions and, as relevant, Washington OUs, to design, implement, assess, and adjust country strategies, projects, and activities based on the best available information to achieve and sustain results. SPP builds Agency capacity in strategic planning, project and activity design, and implementation through the provision of targeted training, tools, and technical assistance and the facilitation of peer-to-peer learning, in coordination with the Office of Human Capital and Talent Management and other Agency stakeholders.

**j.** The **Bureau for Policy, Planning and Learning, Office of Learning, Evaluation, and Research (PPL/LER)** catalyzes USAID's transformation into an effective learning organization by strengthening the integration of monitoring; evaluation; and **Collaborating, Learning, and Adapting (CLA)** throughout the Program Cycle. LER supports the implementation of relevant **legislation and** Agency policies and builds the Agency's capacity in monitoring, evaluation, and **CLA** by providing training and technical assistance, developing policy and guidance, and leading communities of practice **around established and emerging approaches.** USAID's **Agency Evaluation Officer and Agency Knowledge-Management and Organizational Learning Officer are both located in LER.** The Office provides a focal point for partnership on these topics, including with implementing partners, domestic and international agencies and donors, non-governmental organizations, foundations, academic institutions, multilateral organizations, and local governments or organizations in the countries where USAID works. **PPL/LER supports implementation of the FATAA and Title 1 of the Evidence Act. This includes, among other actions, ensuring Agency policies reflect the legislative requirements for monitoring, evaluation, and learning and coordinating Agency-wide Learning Agendas and the Agency Evaluation Plan.**

**k.** The **Bureau for Policy, Planning, and Learning, Office of Donor Engagement (PPL/DE)** leads the Agency efforts in mobilizing collective action that promotes U.S. Government (USG) foreign assistance priorities in the international arena. PPL/DE advocates and builds key relationships by strategically engaging in major multilateral, bilateral, and international fora.

**l.** **Regional Bureaus** serve as the main link between Washington OUs and the field. They are the primary point of contact with the State/F, other USG agencies, international donors, and multilateral organizations regarding foreign assistance policy, budget, and programmatic issues pertaining to the region. Regional Bureaus are responsible for influencing/providing input on foreign assistance policy and budget decisions based on regional and country expertise and analyses. They work in tandem with State/F, the relevant State Regional Bureau, the Office of Budget and Resource Management, and USAID Missions to build, justify, and implement foreign assistance budgets. As part of this process, Regional Bureaus articulate foreign assistance programmatic and funding priorities for countries and cross-border programs in the region and represent USAID Missions' perspectives on budget priorities. Regional

*Text highlighted in yellow indicates that the material is new or substantively revised.*

Bureaus provide technical guidance and support for their respective field Missions in strategic planning, the design of projects and activities, **monitoring, evaluation, and CLA**. This includes engaging with PPL and Pillar Bureaus to ensure consistent application of the Program Cycle and to coordinate the provision of technical assistance. Regional Bureaus may also manage central mechanisms to support Program Cycle implementation.

**m. Pillar or Technical Bureaus** provide technical leadership for the Agency. They disseminate knowledge on recent advances and innovations in their respective technical fields to help the Agency make evidence-based and strategic choices; this includes maintaining strategic relationships with public and private actors in their areas of technical expertise. Pillar Bureaus play an important role in promoting new approaches, adaptations, and country-specific approaches based on learning from research and implementation experience. Pillar Bureaus provide technical guidance and support for strategic planning, project and activity design; and monitoring, evaluation, and **CLA**. This encompasses the provision of field support for research, data collection for routine assessments, and monitoring. Pillar Bureaus also manage central mechanisms that support the design, implementation, and evaluation of field projects and activities, as well as mechanisms that support the implementation of sector strategies and the achievement of sector goals.

**n. The Bureau for Management (M)** provides centralized management support services for the Agency and ensures that core systems related to operational expense budgets, financial accounting and management, acquisition and assistance (A&A), and information management are adequately integrated and support programming processes. The Assistant Administrator of the M Bureau represents the Agency before the Office of Management and Budget (OMB), other Federal agencies, Congress, and the public on matters pertaining to program and management operations.

**o. USAID's Chief Financial Officer (CFO) and the Bureau for Management, Office of the Chief Financial Officer (M/CFO)** oversees financial management activities relating to programs and operations; ensures the compilation of financial data to enable effective performance measurement and management decision-making; and provides leadership and direction in financial management and plays specific roles in the analysis, planning, and design of government-to-government (G2G) programs (see [ADS 220, Use and Strengthening of Reliable Partner Government Systems for Implementation of Direct Assistance](#)).

**p. USAID's Chief Information Officer (CIO) and the Bureau for Management, Office of the Chief Information Officer (M/CIO)** offers advice on strategies to leverage information technology for use in development programming. M/CIO provides oversight and approves all information technology investments within Agency operations. For more information, see [ADS 509, Management and Oversight of Agency Information Technology Resources](#). For roles and responsibilities related to data management and USAID's open data policy, see [ADS 579, USAID Development Data](#).

*Text highlighted in yellow indicates that the material is new or substantively revised.*

q. The **Bureau for Management, Office of Management Policy, Budget and Performance (M/MPBP)** serves as the central unit for the planning and implementation of the Agency's Operating Expense (OE) budget; the formulation of management policy; the monitoring and evaluation of management performance, **compliance and oversight to implement the USAID suspension and debarment program**; and administrative support services.

r. The **Bureau for Management, Office of Management Services, Overseas Management Division (M/MS/OMD)** supports the management functions that underpin USAID's field offices and are generally managed by Backstop 03, Executive Officers.

s. The **Bureau for Management, Office of Acquisition and Assistance (M/OAA)** provides primary leadership in communicating and advising how the Agency can leverage its broad range of acquisition and assistance (A&A) instruments to achieve Program Cycle outcomes. M/OAA also develops, issues, and maintains the Agency's A&A regulations, policies, procedures, and standards, in accordance with statutory and Federal regulations and Agency delegations and requirements and administers the Agency's A&A Plan.

t. The **Office of Budget and Resource Management (BRM)** serves as USAID's central, corporate-level budget office. BRM guides the Agency's allocation of program funds in accordance with Agency-wide, sector specific, and/or Mission strategic plan priorities and facilitates the timely allotment and programming of program funds for implementation. BRM leads Agency-wide resource planning and program budget processes, including the development of Country Development Cooperation Strategies (CDCSs), Regional Development Cooperation Strategies (RDCSs), the Foreign-Assistance Operational Plans (OPs), Bureau and Mission Resource Requests (BRR/MRRs), the preparation of the annual funding report required under Section 653(a) of the Foreign Assistance Act of 1961 (FAA), as amended, and other critical steps in the budget process.

u. The **Office of the General Counsel (GC)** and **Resident Legal Officers (RLOs)** provide legal counsel and advice on a broad range of matters related to project planning and implementation, including those relating to statutory requirements, source and nationality and other types of waivers, and use of partner country systems. GC and RLOs:

- Guide planning and design teams to ensure compliance with relevant policies and statutes;
- Guide the process of negotiating accords with other development actors; and

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- Review and provide feedback on all documentation for agreements signed by the Agency Administrator, Assistant Administrators, Mission Directors, and others authorized to sign on their behalf.

**v.** The **Office of the Inspector General (OIG)** reviews the integrity of operations for USAID, the Millennium Challenge Corporation, the African Development Foundation, the Overseas Private Investment Corporation, and the Inter-American Foundation through audits, investigations, and inspections. OIG conducts and supervises audits and investigations of these organizations' programs and operations and recommends policies designed to promote economy, efficiency, and effectiveness and to prevent and detect fraud and abuse. OIG provides a means for keeping the head of the respective organization and Congress fully and currently informed about problems and deficiencies relating to the administration of the organization's activities and the necessity for and progress of corrective action.

**w.** The **Office of Human Capital and Talent Management (HCTM)** provides leadership and direction in defining and managing USAID workforce planning processes, which includes recruiting staff that directly and indirectly support implementation of the Program Cycle. In coordination with PPL, HCTM designs and implements training to build the knowledge and skills of Agency staff to implement the Program Cycle.

**x.** The **U.S. Global Development Lab** supports the Agency in using science, technology, innovation, and partnerships to achieve the development results identified in country or sector strategies. The Lab also generates new ideas and additional funding from outside sources to implement new approaches, often in collaboration with other development actors.

### **201.3 POLICY DIRECTIVES AND REQUIRED PROCEDURES**

Effective Date: 09/07/2016

This ADS chapter provides the policies, statutory requirements, and procedures for USAID's Program Cycle. It applies in its entirety to all field-based OUs, including Missions, Country Offices, and regional platforms, hereinafter collectively referred to as "Missions." The parts of this chapter that apply to Washington-based OUs are noted explicitly in each section. However, Washington-based OUs should find that much of the guidance and many of the good practices in the chapter are relevant, and they should adopt them whenever feasible. For additional guidance, see [Application of ADS 201 to Washington Operating Units](#).

The mandatory procedures in this chapter are identified by the words "must" or "required." Non-mandatory procedures represent best practices. These procedures are identified by the words "should," "recommend," "may," or other clear designation. USAID Missions do not have to document deviations from non-mandatory procedures;

*Text highlighted in yellow indicates that the material is new or substantively revised.*

however, they might wish to do so for purposes of Agency learning and to ensure continuity during staff transitions.

Mandatory References contain both mandatory and non-mandatory procedures and important details that do not appear in the core chapter. If a reference includes any mandatory language, it must be termed a “Mandatory Reference.” References that do not include mandatory language, but rather provide additional information about a given topic, are termed “Additional Help.”

### **201.3.1 The Program Cycle**

Effective Date: 09/07/2016

The Program Cycle is USAID’s operational model for planning, delivering, assessing, and adapting development programming in a given region or country to advance U.S. foreign and economic policy and American values.

#### **201.3.1.1 Relationship to Development Policy**

Effective Date: 12/23/2019

The Program Cycle provides the means through which USAID operationalizes development policy, as described in [ADS 200, Development Policy](#).

Internal USAID policies, strategies, and vision papers articulate the Agency’s approaches to complex development challenges. The Agency’s development policy is grounded in broad U.S. Government foreign-policy, economic, and development priorities, as well as American values, and reflects commitments to international accords. It comprises required and recommended practices and approaches for international development assistance broadly, and in specific fields. The Agency’s policies, strategies, and vision papers aim to ensure policy coherence, quality, and technical rigor to support evidence-based decision-making and enhance the measurable impact of all USAID’s development programs. A list of the Agency’s current policies, strategies, and vision papers appears in the [Policy Registry database](#).

The Program Cycle allows the Agency to advance U.S. foreign-policy, economic, and development priorities, and American values, in the countries and regions where USAID works, and tailor them to the local country context to produce quantifiable, sustainable results. The [Administrator’s Policy Directive on Agency-Wide Policy and Strategy Implementation](#) provides guidance to Missions on how to align with, and propose exceptions to, the Agency’s policies and strategies.

#### **201.3.1.2 Principles of the Program Cycle**

Effective Date: 10/28/2020

As described in [USAID’s Policy Framework](#), the Journey to Self-Reliance is at the forefront of USAID’s mission “to end the need for foreign assistance.” USAID defines

*Text highlighted in yellow indicates that the material is new or substantively revised.*

“self-reliance” as the capacity to plan, finance, and implement solutions to local development challenges, as well as the commitment to see these solutions through effectively, inclusively, and with accountability. As commitment and capacity in a country strengthens, USAID’s relationship and partnership with the government, civil society, and the private sector in that country should also evolve to ensure the programs the Agency implements best support the Journey to Self-Reliance. USAID fosters capacity and commitment in partner countries across all levels—individuals, communities, companies, and governing institutions—so partners eventually can solve their own development challenges without USAID’s assistance.

USAID uses the Program Cycle to ensure its policies, strategies, allocations of human and financial resources, budget requests, and award-management practices **are evidence-based and** support governments, civil society, and the private sector in each country on their Journey to Self-Reliance. The Program Cycle translates this vision into action, starting with the process for developing RDCSs or CDCSs, and continuing with the design of projects and activities and their subsequent implementation. Threaded throughout is a systematic focus on monitoring, evaluation, **and** collaborating, learning, and adapting (CLA) to assess the progress in implementation, make decisions, and inform course-corrections as needed (including the adjustment of non-performing awards).

The following principles serve as the foundation for the successful implementation of the Program Cycle:

**a. Apply Analytic Rigor to Support Evidence-Based Decision-Making**

USAID’s decisions about where and how to invest foreign-assistance resources must depend on analyses and conclusions supported by evidence. “Analysis” refers to formal assessments, evaluations, and studies conducted by USAID or other development actors **to build and use evidence to promote efficient,** equitable, effective, cost-effective, and high-quality development programs. It also includes structured thinking based on experiences, insights, and internalized knowledge, as well as consultations with key stakeholders, including beneficiaries. The level of rigor and depth of analysis will depend on the information needed at key decision points, as well as the availability of resources, both financial and human, to conduct new analysis, recognizing it is not always possible to have complete or perfect information. When USAID needs information on whether an intervention is achieving a specific outcome, the Agency prefers the use of impact evaluations. Adequate planning and budgeting can help to ensure the timeliness and relevance of information. In addition to mandatory analyses required at relevant phases of the Program Cycle, a range of analytic tools are available to support decision-making in a given country context.

**b. Manage Adaptively through Continuous Learning**

*Text highlighted in yellow indicates that the material is new or substantively revised.*

Facilitating international development inherently requires that USAID work in countries with evolving political and economic contexts. USAID is increasingly working in countries that are unstable or in transition. Yet even in the most stable environments it is difficult to predict reliably how events or circumstances will evolve and impact programs. Therefore, USAID must be able to readily adapt programs in response to changes in context and new information. To do this, the Agency must create an enabling environment that encourages the design of more flexible programs, promotes intentional learning, minimizes the obstacles to and modifying programs, and creates incentives for learning and managing adaptively. Learning can take place through a range of processes and use a variety of sources, such as monitoring data, evaluation findings, research findings, analyses, lessons from implementation, and observation.

#### **c. Promote Sustainability through Local Implementation and Financing**

The sustainability and long-term success of development assistance ultimately require local financing and the strengthening of local institutions to produce measurable outcomes at the regional, national, sub-national, or community levels, as appropriate. USAID should seek out and respond to the priorities and perspectives of local stakeholders, including partner country governments, beneficiaries, civil society (including faith-based organizations), the private sector, multilateral organizations, regional institutions, and academia. These processes should be inclusive of poor, marginalized populations, religious and ethnic minorities, and women and girls. USAID's assistance should align with the priorities of local actors; leverage local resources; and increase local implementation to sustain results over time.

#### **d. Use a Range of Approaches to Achieve Results**

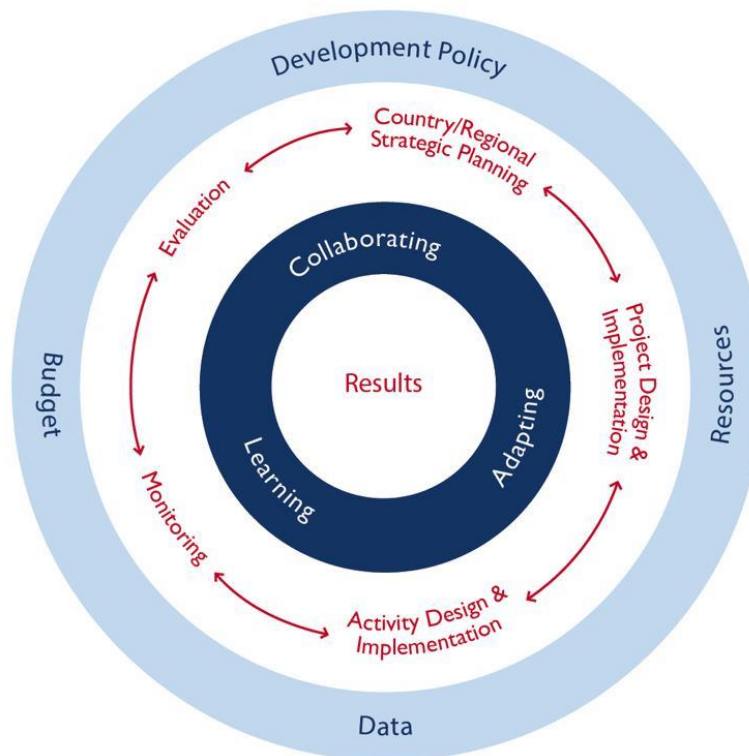

The Program Cycle provides the framework for USAID to consider a range of approaches to address specific development challenges in a given country context. The development community has experimented with a range of approaches in recent years, including solutions driven by science, technology, innovation, and private capital. In addition, new partnerships and commitments forged to work in tandem with developing-country governments, the private sector, universities, civil society, faith-based organizations, multilateral organizations, regional institutions, and other donors provide new tactics for planning, achieving, and measuring development outcomes. It is important to consider a range of options to select the most appropriate means for achieving the desired results, matched to the context, needs, and resources available to carry them out.

### **201.3.1.3 Components of the Program Cycle**

Effective Date: 10/28/2020

*Text highlighted in yellow indicates that the material is new or substantively revised.*

The diagram below graphically represents the Program Cycle and illustrates the interconnected and mutually reinforcing nature of its individual components. The Program Cycle systemically links all aspects of development programming and integrates them through **collaborating**, learning, and adapting. The Program Cycle is neither linear nor sequential; Missions are often engaged in the various components simultaneously.

USAID uses practices in strategic planning, the design and implementation of projects and activities, monitoring, evaluation, and CLA to achieve better measurable development outcomes; to support national self-reliance as effectively as possible; and to improve continuously as a learning organization that builds and uses evidence to inform decisions.

The components of the Program Cycle contribute to the following:

- 1) Accountability to stakeholders (including the beneficiaries of programs, local partners, the U.S. Congress, and U.S. taxpayers) for achieving results. Accountability includes defining objectives and results; managing risk; understanding and reporting results transparently; and continuous learning and using evidence to inform planning, implementation, and adaptation decisions to achieve better quantifiable development outcomes.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- 2) Learning and adapting to improve the achievement of development outcomes. Learning includes analyzing a wide variety of information sources and knowledge, including evaluation findings, monitoring data, research, analyses conducted by USAID or others, and the experiential knowledge of staff and development actors, and adapting as needed to improve the achievement of measurable development outcomes.
- 3) USAID's ability to build and use evidence to accomplish its mission and goals effectively. This includes defining a theory of change based on evidence to achieve country strategic development objectives and measurable results of projects and activities.

While Program Cycle components are presented in separate sections throughout **ADS 201**, they are interdependent. All Program Cycle processes should:

- Consider how best to support national self-reliance, including by engaging local stakeholders; aligning with local priorities; using and strengthening local systems, institutions, and partners; and building local capacity and commitment;
- Be grounded in development hypotheses, and/or theories of change, and designed to fill knowledge and evidence gaps related to the theory of change, programmatic performance, and/or the operating context; and
- Be mutually reinforcing.

#### a. Country and Regional Strategic Planning

Strategic planning is the process through which USAID determines the best strategic approach in a given country or region based on the U.S. Government's foreign policy and economic priorities, individual country or regional priorities, and USAID's comparative advantage and available foreign assistance resources, among other factors. The CDCS defines the highest-order Goal and Development Objectives (DOs) or, in the case of an RDCS, Regional Development Objectives (RDOs), that each Mission, in collaboration with its development partners, will work to address during the strategy period. The CDCS also affords an important opportunity for Washington OUs to align their efforts closely with each Mission's objectives, wherever possible (see [ADS 201man](#)). The CDCS describes the Mission's theory of change or "development hypothesis" regarding how, why, and under what conditions the Mission believes—based on the given parameters and best available information—that it will be successful in advancing the Journey to Self-Reliance. At the center of the CDCS is a Results Framework, a logic model that provides a summary of the development hypothesis and illustrates the key, measurable results the Mission expects to achieve.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

## **b. The Design and Implementation of Projects**

The use of projects is optional. Projects should support the implementation of the CDCS. Informed by evidence, including from the monitoring and evaluation of previous and current projects and analyses of the context, the design of projects organizes multiple activities around a common purpose. During the implementation of projects, USAID staff work collaboratively alongside implementing partners to ensure that activities, taken together, achieve the intended measurable outcomes and continuously adapt them through learning.

## **c. The Design and Implementation of Activities**

The design of activities is the process by which USAID defines how to implement an investment that contributes to a specific purpose, which always should produce measurable results and build local capacity and commitment toward the Journey to Self-Reliance. “Activities” typically refer to a contract, grant, or cooperative agreement with an implementing partner, another U.S. Government Department or Agency, or with partner-country governments. An activity could also be an intervention undertaken directly by USAID staff, such as for policy dialogues or capacity development. During the implementation of activities, USAID staff provide technical direction for, and administrative oversight of, legal agreements and, in some cases, carry out activities directly. They also monitor, evaluate, and learn from implementation to track progress, make decisions, and inform course corrections as needed.

## **d. Monitoring**

Monitoring is the ongoing and systematic tracking of information relevant to USAID’s strategies, projects, and activities. Information derived from monitoring serves two important functions:

- 1) Monitoring data gathered during implementation support learning and adaptive management. When relevant and high-quality monitoring data are available to aid in analysis, complement and reinforce evaluation, and inform decisions during implementation, USAID is better able to adapt in a timely way and ensure that projects and activities contribute to measurable results and the Journey to Self-Reliance.
- 2) Monitoring data are the backbone of the accountability structure at USAID. Monitoring data provide the public with information on the progress USAID is making, and Washington and external stakeholders (through the Performance Plan and Report and other reporting processes) with information needed to inform decision-making.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

## e. Evaluation

Evaluation is the systematic collection and analysis of information about strategies, projects, and activities as a basis for judgements to improve or inform decisions about programming. Evaluation also has a two-fold purpose: ensuring accountability to stakeholders and learning to improve development outcomes. Timely, high-quality evaluation supports adaptive management and complements programmatic monitoring. Evaluation contributes to building national self-reliance by generating evidence for what works and building capacity and commitment for using evidence in decision-making. USAID evaluations should use the highest level of rigor appropriate to the evaluation question. When USAID needs information on whether an intervention is achieving a specific outcome, the Agency prefers the use of impact evaluations.

## f. Collaborating, Learning, and Adapting (CLA)

CLA is USAID's approach to organizational learning and adaptive management. Strategic collaboration among a wide range of internal and external stakeholders, continuous learning, and adaptive management connect all components of the Program Cycle and play an integral role in ensuring that USAID's resources support the Journey to Self-Reliance. Sources for learning include data from monitoring, portfolio reviews, research findings, evaluations, analyses, knowledge gained from experience, and other sources. These sources may be used to develop plans, implement projects, manage adaptively, and contribute to USAID's knowledge base to improve measurable development outcomes. CLA helps ensure that USAID coordinates its investments with other development actors, grounds them in evidence, and adjusts them as necessary throughout implementation.

## g. Budgets and Resources

Budgets reflect policy decisions and the prioritization of resources to achieve USAID's objectives. Budgetary projections, both program-wide and sector-specific, reflect the Agency's strategic-planning process. When developing the CDCS, Missions should also consider centrally managed funds by Washington OUs, including humanitarian assistance and transition initiatives, and non-appropriated resources, including leveraged funding, other donor assistance, and in-kind contributions.

## h. Data-Management

OUs should apply appropriate data-management requirements, practices, and standards throughout the Program Cycle to treat data as an asset at each stage in a data lifecycle, from planning and collection to sharing and re-use, and across the Program Cycle's components, to manage USAID-funded data responsibly.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

Data-management refers to the practices that USAID staff and implementing partners use to treat data as a strategic asset and to ensure that timely and high-quality monitoring, evaluation, research, and other data generated or acquired during an activity are available and ready for analyses; accessible and usable for learning and adaptation (both now and in the future); sharable for accountability and transparency; and that the sharing and use of data come with strong privacy and security protections. OUs should account for planning, budgeting, resourcing, and other mechanisms needed to acquire, store, analyze, share, and use data responsibly to inform decisions related to USAID strategies, projects, and activities. OUs should include procedures for delivering USAID-funded data and information to the Agency per award guidelines and Agency policies (see [ADS 579, USAID Development Data](#) for further guidance).

#### **201.3.1.4 Management and Implementation of the Program Cycle**

Effective Date: 10/28/2020

Missions must define clear responsibilities and delegations of authority to support the implementation of the Program Cycle. Structure and organization at individual Missions will vary depending on the overall size and complexity of their programs, their staffing patterns, and country context, and could evolve over time. Missions should consider how best to streamline internal processes and procedures and strengthen their structure, operations, and staff competencies while leveraging existing capacity, particularly that of [Cooperating Country National \(CCN\)](#) and Foreign Service National (FSN) staff.

#### **201.3.1.5 Waivers and Exemptions**

Effective Date: 06/11/2019

Information on waivers and exemptions related to specific Program Cycle policies and procedures, such as waivers and exemptions for developing a CDCS or project design, appears in the relevant sections of this chapter.

#### **201.3.1.6 Contingency Operations**

Effective Date: 06/11/2019

Missions operating in areas of overseas contingency operations (generally defined with reference to Section 101(a)(13) of Title 10 of the United States Code (U.S.C.), e.g., when there is armed conflict that involves American armed forces) are subject to a number of special requirements. These requirements focus on three areas: assessments of necessity and sustainability with regard to certain capital-assistance projects; requirements on the funding and use of private security contractors; and special contract risk-assessments and risk-mitigation plans. For a comprehensive discussion of these requirements and when they are applicable, see [ADS 201maj, Contingency Operations](#).

*Text highlighted in yellow indicates that the material is new or substantively revised.*

### 201.3.1.7 Key Considerations for Programming in Politically Sensitive Countries

Effective Date: 12/23/2019

OUs that manage non-humanitarian programming in designated “politically sensitive” countries must assess such programming against a set of “Key Considerations” to ensure the appropriate management of the unique risks inherent to these contexts. These reviews of “Key Considerations” must take place, at minimum, during the design of projects or activities, and during implementation, as appropriate. In addition, these reviews must take place under the guidance and oversight of the cognizant Regional Bureau.

Assistant Administrators (AAs) in the Regional Bureau are responsible for determining which countries within their respective region are “politically sensitive countries” that merit a review of “Key Considerations.” USAID defines a “politically sensitive country” as a country in which the government:

- Is politically repressive; and
- Has explicitly rejected USAID assistance, or has such an adverse relationship with the United States that the Agency cannot work or cooperate with the government on development assistance.

Politically sensitive countries might or might not be countries in which USAID has U.S. Direct-Hire field presence. However, the risk profile is typically heightened in non-presence countries.

### 201.3.1.8 Legal Requirements on the Use of Funds

Effective Date: 10/28/2020

USAID’s funds are subject to numerous legal requirements on their use. The Agency should document compliance with these requirements prior to the obligation of funds, whether an initial obligation associated with a new agreement or an incremental funding obligation thereafter.

In most cases, the OU that obligates the funds is the party responsible for addressing and documenting compliance with legal requirements. However, for field buy-ins into Washington agreements (e.g., transfers under Field Support agreements), the Mission is often responsible for some or all of their documentation (see section **201.3.4.6(b)**).

For Missions that obligate funds into Development Objective Agreements (DOAGs), GC/RLO may approve a deferral of certain requirements to the sub-obligation stage (see section **201.3.2.19** for additional guidance on DOAGs, and [ADS 201mad](#)).

*Text highlighted in yellow indicates that the material is new or substantively revised.*

**Summary Checklist of the Legal Requirements for Obligating Funds into a Development Objective Assistance Agreement** for additional guidance).

The General Counsel's Office produces annual Country and Activity Checklists (also known as Country- and Activity-Level Statutory Reviews) to assist OUs in ensuring compliance with legal requirements (see [ADS 200sbs](#) for the most recent statutory checklist). OUs should work with their RLOs or Points of Contact (POCs) in GC on questions related to these requirements, and at what stage in planning and implementation they should address them. Because these checklists do not include every country prohibition or restriction, OUs should consult with their RLO/GC POCs to determine if there are additional country-specific or activity-specific prohibitions and "notwithstanding" authorities.

- **Country-Level Statutory Review (Country Checklist):** Cognizant Bureau Desk Officers complete annual Country Checklists, with clearance from GC and the Department of State. Missions and Washington OUs must review, and keep on file, the Country Checklist(s) that correspond to the Fiscal Year(s) in which funds were appropriated prior to the obligation of funds, as well as prior to sub-obligation, where applicable. Because restrictions on assistance to a country that affects prior-year funds may be triggered in subsequent years, OUs should also review the most current Country Checklist. If answers to the current Country Checklist change during the Fiscal Year—for example, if a restriction is triggered after clearance of the checklist—the RLO or GC POC may request changes to the answer in the cleared checklist.
- **Activity-Level Statutory Review (Activity Checklist):** Missions and Washington OUs complete Activity Checklist(s) that correspond to the Fiscal Year(s) in which funds were appropriated prior to the obligation of funds. They should also complete or review them prior to sub-obligation, where applicable. It is crucial that USAID staff with close knowledge of the activity complete/review the checklists. In the case of activities funded incrementally in more than one Fiscal Year, OUs should review the Activity Checklist before subsequent increments of funding in future Fiscal Years to ensure compliance with any new or different requirements that could apply to those Fiscal Year funds.

### **201.3.2 Strategic Planning and Implementation**

Effective Date: 10/28/2020

Strategic planning is the process by which USAID determines the best strategic approach to foster or accelerate lasting gains along the Journey to Self-Reliance in a given country or region (see section **201.3.1** on USAID's self-reliance vision and section **201.3.2.8** on self-reliance in the CDCS). This process requires that USAID consider trade-offs and make difficult choices based on a rigorous analysis of national or regional needs and priorities, U.S. Government policy imperatives, foreign-assistance resources, and USAID's comparative advantage, all framed around the Self-Reliance Country

*Text highlighted in yellow indicates that the material is new or substantively revised.*

Roadmap, USAID’s primary self-reliance tool (or, in the case of an RDCS, the Regional Landscape Analysis). Strategic planning is essential in all the contexts in which USAID works—from relatively stable countries to those that are constantly in flux. A thoughtful, evidence-based approach to prioritizing and utilizing available resources, including a Mission’s funding (from all sources), staff, and convening power, is necessary for successful development in any context.

The strategic-planning process culminates in a CDCS or RDCS (hereinafter collectively referred to as “CDCS” unless otherwise specified). The process of developing a CDCS is just as important as the product itself. Internally, the process provides an opportunity for staff from OUs to consider current resource and policy parameters; review lessons from data from monitoring and evaluation, implementation experience, site visits, and other sources of evidence; explore different hypotheses about how change is expected to unfold; and promote shared buy-in around the final approach. Externally, the process creates a forum for Missions to understand the views and perspectives of local partners and others in the development community, explore ways in which to complement and/or leverage efforts, and build self-reliance by facilitating greater financing and stewardship of, and commitment to, the development process.

The CDCS defines the highest-order Goals and Development Objectives (DOs) or, in the case of an RDCS, Regional Development Objectives (RDOs), that the Mission, in collaboration with its development partners, will address during the strategy period. The Goals and DOs must reflect principles of the Journey to Self-Reliance and clearly reflect the priorities of the Administration and USAID. It also describes the Mission’s theory of change or “development hypothesis” regarding how and why, and under what conditions, the Mission believes—based on the given parameters and best available information—that it will be successful in advancing these objectives. At the center of the CDCS is a Results Framework, a type of logic model that provides a summary snapshot of the development hypothesis—that illustrates the key results that the Mission expects to achieve and the major ways it expects the changes to unfold.

The CDCS is not a rigid blueprint for change; it is an organizing framework to facilitate the ongoing process of monitoring, evaluation, learning, and adapting in support of its strategic objectives. During the implementation of a CDCS, Missions should work with, and through, local partners to support them in leading their own change, facilitate collaborative learning both inside and outside the Mission, monitor the country or regional context, assess the validity of the overall development hypothesis that underpins the CDCS, and make iterative adjustments as necessary.

### **201.3.2.1 Functions of the Country Development Cooperation Strategy**

Effective Date: 07/23/2020

The CDCS that results from the strategic planning process has several functions:

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- 1) It translates goals outlined in the [National Security Strategy \(NSS\)](#); the [State-USAID Joint Strategic Plan \(JSP\)](#); [State-USAID Joint Regional Strategies \(JRSs\)](#); the [USAID Policy Framework](#); Administration-approved Regional Strategies; USAID's [Acquisition and Assistance Strategy](#); [Private-Sector Engagement Policy](#); and [Risk-Appetite Statement](#); and other Administration and Agency strategies and policies relevant for the Mission context. It also serves as the development foundation for the [State-USAID Integrated Country Strategy \(ICS\)](#).
- 2) For Bilateral Missions, the CDCS defines a Mission's Goal, DOs, and approach to build self-reliance in a partner country, based on a given level of resources over an agreed-upon period of time, typically (but not necessarily) five years. For Regional Missions, in line with the [regional platforms optimization guidance](#), the RDCS defines a Mission's Goal, RDOs, and approach for addressing exclusively transboundary issues to contribute to the self-reliance of countries within that region.
- 3) It provides a guide for the subsequent design of projects and activities that aim to carry out specific results in the CDCS. It also affords an important opportunity for Washington OUs and USAID's Regional Missions to align their field-based activities with the strategies of bilateral Missions as much as possible, as encouraged in section **201.3.4.4**.
- 4) It serves as a frame of reference for the annual Congressional Budget Justification (CBJ), the Operational Plan (OP), and the Performance Plan and Report (PPR) required under Section 653(a) of the FAA, as amended.
- 5) It provides a communications device to tell stakeholders, including the U.S. Government interagency, partner governments, the development community, local partners, the private sector, and others, about a Mission's goals and objectives.
- 6) It promotes the principles of aid effectiveness, including local financing and stewardship, strategic alignment with the development priorities in partner countries, harmonization with other donors, and mutual accountability.
- 7) It provides an organizing framework for the Mission-wide Performance Management Plan (PMP), and collaborating, learning, and adapting that occurs throughout implementation of activities (see section **201.3.2.15** on the PMP).

### **201.3.2.2 The Role of Missions and Washington OUs in Developing Country Development Cooperation Strategies**

Effective Date: 07/23/2020

The development of CDCSs is an Agency- and Mission-wide effort led by Mission

*Text highlighted in yellow indicates that the material is new or substantively revised.*

Directors. The following roles are critical:

- **Missions.** During the process of developing CDCSs, Missions collaborate with USAID/Washington to set overarching priorities and sectoral focus; assess their Country Roadmaps (or, in the case of an RDCS, their Regional Landscape Analyses and [optimization action plans](#)) and related self-reliance approaches; engage with local stakeholders; conduct mandatory analyses; examine other sources of evidence or information as relevant; apply findings to develop proposed approaches; prepare, submit, and/or present required deliverables in each phase of the process of developing a CDCS; and develop the full CDCS. During the implementation of CDCSs, Missions develop a PMP to track and assess performance; negotiate and execute DOAGs with partner governments (as relevant); work with the Country Team at the relevant U.S. Embassy to reflect CDCS DOs in the interagency ICS; design and implement projects and activities that support the CDCS; use CDCS objectives as the basis for planning, budgeting, and reporting processes; monitor and evaluate the implementation of the CDCS; revalidate periodically the strategic approach through strategy-level portfolio reviews, the Mid-Course Stocktaking, and other learning activities; and amend and/or update the CDCS and associated PMP as necessary.
- **PPL.** PPL develops Agency-wide policies, procedures, and guidance related to the CDCS and associated processes connected to the Program Cycle; provides oversight of the process of developing CDCSs and their subsequent implementation; mediates disagreements between Regional and Pillar Bureaus during the CDCS process, as necessary; and supports Missions with technical assistance on the development and implementation of CDCSs. PPL clears the Summary of Conclusions memorandum at the end of Phase One and Phase Two of the CDCS process. In addition, the AtA for PPL co-approves the CDCS, and any extensions or amendments thereto, along with the relevant Regional Bureau AA.
- **Regional Bureaus.** Regional Bureaus provide guidance to Missions on policies, regional and country priorities, and other regional issues, and support Missions with technical assistance on the development and implementation of CDCSs. As the primary interlocutor between Washington OUs and the field, Regional Bureaus also provide essential support to Missions to facilitate engagement with stakeholders and Washington OUs throughout the process of creating CDCSs and are the conduits for feedback to the Missions regarding their proposed strategic plans. Regional Bureaus draft the Summary of Conclusions memorandum at the end of Phase One and Phase Two of the CDCS process. In addition, Regional Bureau AAs co-approve the CDCS, and any amendments or extensions over six months, along with the AtA for PPL.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- Pillar Bureaus. Pillar Bureaus provide technical leadership, ensure the implementation of Agency-wide sectoral strategies and initiatives, and provide technical assistance to Missions, as requested, in support of the functions outlined in this section, including for assessments and the collection of other evidence needed to develop CDCSs. Pillar Bureaus provide critical input and clearance on the parameters for developing CDCSs and clear subsequent CDCS deliverables, as relevant and appropriate. To the greatest extent possible, Pillar Bureaus should align their centrally managed programs with priorities and needs in approved CDCSs.
- BRM. BRM guides the resource-planning aspects of the CDCS process, including providing parameters at the beginning of the process to inform the Mission's budget scenarios, providing historical data and analysis on budget trends, and addressing any budgetary questions or concerns during each phase of the process for developing CDCSs. BRM also clears all Summaries of Conclusions during the process that include budget information, in addition to the CDCS itself.
- U.S. Department of State Office of Foreign Assistance Resources (State/F). State/F leads the interagency strategic planning for the implementation of foreign assistance, including through the Department of State/USAID Joint Strategic Plan, and State/USAID Joint Regional Strategies. At the country level, State/F guides the development of the ICS, a multi-year, overarching strategy that encapsulates the U.S. Government's policy priorities and objectives, and the means for achieving them.
- Bureau for Management (M). M serves as an advisor on business processes, public financial-management, risk, and procurement, and works with Missions, as requested, to ensure the appropriate incorporation of issues into each CDCS. In conjunction with the Regional Bureaus, the M Bureau provides parameters for, and feedback on, a Mission's proposed use of Operating Expense (OE) funds. The M Bureau also provides substantive feedback on the Management Resources and Structure section of the full CDCS during Phase Three of the CDCS process (see [ADS 101.3.1.6](#) for further detail on M).
- Office of Human Capital and Talent-Management (HCTM). HCTM provides parameters for, and feedback on, a Mission's proposed staffing pattern and requests for changes to human-resource levels. In some cases, HCTM will need to consult with backstop coordinators in the Pillar Bureaus to provide Missions with the most-accurate information.
- Office of Forestry and Biodiversity within the Bureau for Economic Growth, Education, and the Environment, (E3/FAB). E3/FAB, in partnership with Regional Environmental Officers, provides Missions with direction on the

*Text highlighted in yellow indicates that the material is new or substantively revised.*

mandatory strategy-level analyses of tropical forests and biodiversity, and the integration of their findings into the CDCSs as relevant. For additional guidance, see [ADS 201mag, Process for Developing and Approving a Country Development Cooperation Strategy \(CDCS\)](#), [ADS 201maz, Process for Developing and Approving a Regional Development Cooperation Strategy \(RDCS\)](#), and [ADS 201mav, Foreign Assistance Act Sections 118 and 119 Tropical Forests and Biodiversity Analysis](#) and [Foreign Assistance Act Sections 118/119 Tropical Forests and Biodiversity Analysis Best Practices Guide](#).

- Office of Gender Equality and Women’s Empowerment (E3/GenDev) in E3. E3/GenDev, in partnership with Gender Advisors in the Regional Bureaus, provides Missions with direction on the mandatory strategy-level gender analyses, and the integration of their findings into the CDCSs as relevant. For additional guidance, see [ADS 201mag, Process for Developing and Approving a Country Development Cooperation Strategy \(CDCS\)](#), [ADS 201maz, Process for Developing and Approving a Regional Development Cooperation Strategy \(RDCS\)](#), and [ADS 205, Integrating Gender Equality and Female Empowerment in USAID’s Program Cycle](#).
- Office of Global Climate Change (E3/GCC) in E3. E3/GCC, in partnership with Bureau and Mission Climate Integration Leads, provides Missions with direction on the mandatory strategy-level analyses of climate, and the integration of their findings into CDCSs as relevant. For additional guidance, see [ADS 201mag, Process for Developing and Approving a Country Development Cooperation Strategy \(CDCS\)](#), [ADS 201maz, Process for Developing and Approving a Regional Development Cooperation Strategy \(RDCS\)](#), and [ADS 201mat, Climate Change in USAID Country/Regional Strategies](#).

For more information, see [ADS 201mag, Process for Developing and Approving a Country Development Cooperation Strategy \(CDCS\)](#), and [ADS 201maz, Process for Developing and Approving a Regional Development Cooperation Strategy \(RDCS\)](#).

### **201.3.2.3 Applicability of Guidance for Country Development Cooperation Strategies**

Effective Date: 07/23/2020

The CDCS guidance herein, and in associated Mandatory References, is applicable to all Regional and Bilateral Missions (hereinafter referred to collectively as Missions), unless exempted according to section **201.3.2.4** or the Mission acquires a waiver under section **201.3.2.5**. This guidance does not apply to other types of overseas OUs, such as Country Offices or Regional Platforms that do not meet the criteria for a Mission described in [ADS 102, Agency Organization](#); however, exempt OUs, including those in Washington, are encouraged to apply this guidance, with adaptations as appropriate

*Text highlighted in yellow indicates that the material is new or substantively revised.*

and necessary. PPL, in collaboration with the Regional Bureaus, must update and internally disseminate a list of Missions required to complete a CDCS on at least an annual basis.

Recognizing that Missions and countries are diverse, this guidance articulates principles and requirements generally adaptable to all contexts, including those with factors that contribute to a non-permissive environment (NPE). During Phase One of the CDCS process, Missions and USAID/Washington negotiate customized parameters that govern the development of each CDCS and document the decisions in a Summary of Conclusions (SOC) memorandum approved by the Assistant Administrator (AA) of the relevant Regional Bureau (see section **201.3.2.10** on the three phases). For Missions that operate in NPEs, customizations may include adjustments to the Results Framework, a shorter CDCS timeframe, greater attention to country or regional context indicators, and/or scenario planning, among other options.

This guidance also recognizes that certain variations are appropriate for designated Missions operating in countries with advanced levels of capacity and commitment that will be undertaking a “Strategic Transition,” as described in section **201.3.2.8**. This guidance describes these variations where relevant, both in this chapter and in associated Mandatory References. PPL must consult with the Regional Bureaus to identify and designate countries that have advanced levels of self-reliance and where a strategic transition will occur.

#### **201.3.2.4 Exemptions to the Requirement to Create Country Development Cooperation Strategies**

Effective Date: 10/28/2020

##### **a. Types of Operating Units (OUs)**

As described in section **201.3.2.3**, the guidance herein applies to Missions. Therefore, Washington OUs and the following types of overseas Bilateral OUs are exempt from this guidance:

- 1) Overseas OUs with limited presence or that do not manage at least \$20 million in programming, such as Country Offices; and
- 2) Overseas OUs that implement single-sector programs.

Similarly, the following types of Regional OUs are exempt from this guidance:

- 1) Overseas OUs that provide only a combination of technical support (e.g., gender, environment), pooled support services (e.g., legal, financial management, procurement), and/or regional convening/facilitation services without implementing regional programming. However, these platforms are still required to follow the [regional platforms optimization guidance](#);

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- 2) Overseas OUs that implement single-sector regional programs; and
- 3) Bilateral OUs that run limited regional programming.

An OU that is exempt may request approval to develop a regional- or country-level strategy framework that is not subject to the process or requirements herein. However, OUs are encouraged to use the CDCS guidance and templates, with adaptations as necessary and appropriate. In such cases, the OU must submit the request through an Action Memorandum to be approved by the relevant Regional Bureau AA, with clearance from the AtA for PPL. The Action Memorandum must describe how the OU will customize the process and resulting document. The Regional Bureau AA must provide oversight of the subsequent process.

An overseas OU that is exempt may request approval to develop a CDCS. In such cases, the OU must submit the request through an Action Memorandum for co-approval by the relevant Regional Bureau AA and the AtA for PPL.

## b. Types of Programming

The following types of programming are exempt from inclusion in the CDCS:

- 1) Programming both funded and managed by other OUs (e.g., Washington OUs);
- 2) Programming targeted at preventing, responding to, recovering from, and/or transitioning from crisis, including:
  - Activities funded by the International Disaster Account (IDA) and managed by the Bureau for Humanitarian Assistance (BHA), including emergency and non-emergency programs; and
  - Activities managed by the Office of Transition Initiatives (OTI) within the Bureau for Conflict Prevention and Stabilization (CPS).

While such programming is exempt, Missions should leverage their CDCS process, to the extent practicable and feasible, to bring greater alignment and synergy between Mission-funded development programming and other USAID activities implemented in-country or across the region, particularly programming funded by Washington, humanitarian assistance, and programming targeted at addressing crisis and/or instability. In addition, Missions in countries with protracted crises and/or instability should consider including a Special Objective in their CDCSs that addresses humanitarian, transition, and/or stabilization issues (see section **201.3.2.12**).

*Text highlighted in yellow indicates that the material is new or substantively revised.*

### **201.3.2.5 Waivers from the Requirement to Create Country Development Cooperation Strategies**

Effective Date: 12/23/2019

Under extenuating circumstances that restrict the Agency's ability to plan, Missions may request a waiver from the CDCS process. The relevant Regional Bureau AA and the AtA for PPL must co-approve the Action Memorandum that provides a justification for requesting the waiver and the duration of the waiver, not to exceed two years. The Regional Bureau AA and the AtA for PPL may extend a waiver based on a review of a follow-on justification.

### **201.3.2.6 Alignment of Country Development Cooperation Strategies with Agency and Inter-Agency Strategies/Policies**

Effective Date: 07/23/2020

Development policies and strategies—including U.S. Government-wide, multi-agency, multi-Department, USAID-specific, regional, and sectoral strategies, as well as CDCSs and other Mission-level planning documents—should align with one another closely. In addition, USAID OUs that are developing other types of strategies or development policies (e.g., Washington OUs, and, in some cases, Regional Missions) should ensure that they do not undermine align with approaches set forth in approved CDCSs, except in exceptional circumstances, such as when mandated by the Administration or the Congress.

Missions must align their CDCSs with the following policies and strategies as described below:

- National Security Strategy (NSS). The NSS is a document prepared periodically by the Executive Branch of the U.S. Government that outlines American values and the major national-security and international economic concerns of the United States and how the Administration plans to deal with them. Missions must ensure their CDCSs align with the relevant pillars in the NSS. The current NSS is available [here](#). To complement the NSS, U.S. foreign assistance, including funding from USAID, must support America's national interests through three primary guiding principles:
  - Win the Great Power competition;
  - Share foreign-aid burdens fairly and focus aid on friends and allies; and
  - Graduate countries and organizations from foreign assistance.
- State Department-USAID Joint Strategic Plan (JSP). The JSP outlines overarching goals and objectives for both institutions in support of the NSS. The JSP informs the development of Joint Regional Strategies and Integrated

*Text highlighted in yellow indicates that the material is new or substantively revised.*

Country Strategies. Missions must ensure their CDCSs align with relevant goals and objectives in the JSP to advance self-reliance. The Fiscal Year 2018–2022 JSP is available [here](#).

- Administration-Approved Regional and Sectoral Strategies. These documents flow from the NSS and set out the major national-security and international economic concerns of the United States in regions of the world or in cross-cutting sectoral areas (such as counter-terrorism or biosecurity) and how the Administration plans to deal with them. A strategy is considered “Administration-approved” when a Deputies’ or Principals’ Committee has endorsed it and the National Security Council has published it. The current, official, unclassified versions of the regional and sectoral strategies are available here.
- State Department-USAID Joint Regional Strategies (JRSs). JRSs outline overarching goals and objectives for both institutions at the regional level in support of the JSP and NSS. JRSs inform the development of Integrated Country Strategies. Missions must ensure that CDCSs align with relevant goals and objectives in their respective JRS. The JRSs for each region are available [here](#).
- Integrated Country Strategies (ICS). ICSs outline overarching goals and objectives at the country level for State, USAID, and other U.S. Government Departments and Agencies with programming in the country through a coordinated and collaborative planning effort led by the Chief of Mission. ICSs support respective JRSs, the JSP, and the NSS. The ICSs for each country can be found [here](#).

According to guidance on ICSs from the Department of State, Country Teams at U.S. Embassies must clearly reflect DOs from CDCSs in their ICSs because they are central to the annual foreign-assistance Budget Request and performance-monitoring systems of the State Department and USAID. Therefore, each Mission must work with the Country Team to ensure the development priorities of its CDCS are part of the process of developing Mission Objectives (MOs).

Since Missions are accountable for results at the IR level in the CDCS, Missions should preferably keep IRs together for reporting purposes. In the event that a Mission divides its IRs among multiple MOs or sub-Objectives, the Mission must document why it is necessary and how the division will be tracked and reported.

Missions must indicate in the ICS where the DOs are incorporated (*i.e.*, at the Mission Objective or Sub-Objective levels), with parenthetical references in Sections 3 and 4. Missions must also include these references with the MOs in the FACTSInfo NextGen system to ensure users can easily map and find the CDCS DOs when submitting resource and performance-reporting requirements.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

Missions must also submit a draft revised ICS goal–objective structure as part of the Results Framework Matrix in an annex to the final CDCS (see section **201.3.2.11**).

- **USAID Policy Framework.** USAID’s Policy Framework serves as the guiding policy document for USAID and takes its direction from the JSP and the NSS. The Policy Framework translates the goals outlined in the JSP and NSS specifically for USAID. Missions must reflect the principles and guidance from the Policy Framework in their CDCS. The current Policy Framework is available [here](#).
- **USAID Acquisition and Assistance (A&A) Strategy.** USAID’s A&A Strategy outlines the key changes that USAID needs to make to better enable and equip its A&A workforce and systems to advance self-reliance. Missions should reflect principles from this Strategy in their CDCSs as much as possible. The A&A Strategy is available [here](#).
- **USAID Risk-Appetite Statement.** USAID’s Risk Appetite Statement sets expectations about how USAID’s OUs should assess and manage threats and opportunities. The Statement is available [here](#).
- **USAID Development Policies, Strategies, and Vision Papers.** According to [ADS 200](#), USAID publishes three different types of development policy documents: 1) policies; 2) strategies; and 3) vision papers. Not all USAID development policy documents are equally relevant for all contexts. Missions should consider the relevance of each policy for their context (based on the needs and priorities in partner countries, available resources, the results of analyses, investments by other members of the development community, or other factors) to determine whether and how they should integrate the policy into their CDCS and other planning processes under the Program Cycle. In exceptional cases when a USAID policy mandates roles and responsibilities for specific Missions, these Missions must align their CDCS and associated projects and activities in accordance with the policy. A registry of USAID policies is available [here](#).

### **201.3.2.7 Alignment of Country Development Cooperation Strategies with Projects and Activities**

Effective Date: 10/28/2020

The CDCS informs the design and implementation of projects and activities:

- “Projects” refer to groups of activities designed and managed in a coordinated way to advance identified result(s) set forth in a CDCS. According to section **201.3.2.14**, the use of projects is voluntary.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- “Activities” generally refer to implementing mechanisms that carry out an intervention or set of interventions to advance identified development result(s) in the CDCS and achieve measurable outcomes. Activities may be component activities under a project, or standalone activities that are not part of a project approach.

Oftentimes, the life of **projects and/or activities** will not coincide with the life of a CDCS. The Index of Existing and Planned Projects annexed to the CDCS (see section **201.3.2.11**) describes a Mission’s best thinking at the time of the Strategy’s approval regarding how it plans to achieve the results outlined in the CDCS through new projects and the realignment of existing projects.

To not constrain future design processes, a Mission should not provide in-depth details about projects or activities in its CDCS. If the Strategy changes as a result of further analysis during future processes to design projects or activities, a Mission must update or amend its CDCS according to section **201.3.2.21**.

See sections **201.3.3** and **201.3.4** for additional guidance on projects and activities, respectively.

### **201.3.2.8 Self-Reliance in Country Development Cooperation Strategies**

Effective Date: 07/23/2020

As described in [USAID’s Policy Framework](#) (see section **201.3.2.6** regarding this and other U.S. Government policies), the Journey to Self-Reliance is at the forefront of USAID’s mission “to end the need for foreign assistance,” and each country context (or, in the case of an RDCS, regional context) is the first unit of analysis to make this vision real, reflected in large part through the Country Roadmaps. To this end, Missions, in collaboration with USAID/Washington, must develop CDCSs that orient their work around fostering capacity and commitment in partner countries across all levels—individuals, communities, civil society, the private sector, and governing or regional institutions—so they can address and fund their development challenges eventually without USAID assistance.

This means that Missions that are developing CDCSs must be innovative and strategic about where and how they work, and focus on the three principles for fostering self-reliance described in the USAID Policy Framework: advancing national progress in support of self-reliance, proposing investments that have the most impact, and sustaining results for meaningful change. Missions must also consider how programming addresses challenges to the Journey to Self-Reliance posed by external and internal malign actors.

To ensure CDCSs embody the self-reliance approach, Missions must apply the following guidance:

*Text highlighted in yellow indicates that the material is new or substantively revised.*

a. Use the Journey to Self-Reliance Country Roadmaps or Regional Landscape Analyses to Inform Approaches

First, a Mission must understand how self-reliant its partner country is overall (or, for Regional Missions, partner countries), including its self-reliance strengths and challenges. The Journey to Self-Reliance Country Roadmap is USAID's standardized analytical tool for visualizing national progress overall and across the dimensions of commitment and capacity based on a set of third-party, publicly available metrics. The Regional Landscape Analysis does the same for partner countries within a given region. Since the Country Roadmap and Regional Landscape Analysis metrics are high-level, Missions also should analyze and apply additional secondary and region- or country-specific data sources and use other analyses to understand the country or region's underlying self-reliance story, including the impact of external and internal malign actors.

Missions should use their Country Roadmaps (or, in the case of Regional Missions, their Regional Landscape Analyses) and any secondary metrics to inform the strategic choices they propose in their CDCSs. In addition, Missions should use the Country Roadmap or Regional Landscape Analyses as a tool to initiate conversations about self-reliance with local stakeholders, including with the partner-country governments and/or regional institutions.

To find Country Roadmaps for all low- and middle-income countries, see [USAID's Journey to Self-Reliance Country Roadmaps web portal](#). This web portal also includes a number of additional resources, including a Compendium of Secondary Metrics that provides suggested context indicators and other resources to further inform decision-making processes related to self-reliance beyond the primary metrics in the Country Roadmap. For guidance on how to use the Country Roadmaps and secondary metrics during the process of creating a CDCS, see [Technical Note: Applying the Country Roadmap to the Country Development Cooperation Strategy \(CDCS\)](#). Regional Missions should contact PPL's Journey to Self-Reliance Metrics Team to request a Regional Landscape Analysis.

b. Incorporate Key Approaches to Fostering Self-Reliance

Missions should apply the three principles in the Policy Framework: 1) advance country progress; 2) invest for impact; and 3) sustain results. Among the broad considerations that pertain to each principle, a Mission must incorporate the following key approaches into its CDCS:

1) Advance Country Progress:

- [Redefining the Development Relationship with Partner Governments](#)—Missions should assess the range of policies,

*Text highlighted in yellow indicates that the material is new or substantively revised.*

programmatic tools, and other measures they have at their disposal to promote greater commitment and capacity of their partner-country governments and/or regional partners or institutions to support the vision for self-reliance. This means Missions should engage their partner government to identify shared objectives and negotiate key commitments to cost-sharing and policy reforms that enable private investment and trade, enterprise-led growth, and democratic, citizen-responsive governance and individual rights and freedoms; coordinate with the U.S. Embassy Country Team(s) to align U.S. foreign-policy and economic objectives with efforts to incentivize commitments from the partner-country governments or regional institutions; strengthen the core capacities of the partner-country governments to lead on the Journey to Self-Reliance and use local institutions to deliver assistance as much as possible, where appropriate commitment and capacity exist; leverage broader civil society and the private sector to hold government accountable for delivering on its commitments; and identify opportunities to apply the collective influence of other donors to incentivize commitment from partner governments and improve burden-sharing.

**2) Invest for Impact:**

- **Financing Self-Reliance**—Missions should identify how they can strengthen the capacity and commitment of their partner-country government and the private sector to finance their nation’s own economic and social development. This includes assisting partner-country governments in mobilizing additional public revenues; expending resources more effectively, transparently, and with accountability; and/or creating the enabling conditions for private investment and functioning capital markets.

**3) Sustain Results:**

- **Private-Sector Engagement**—Missions should increase and deepen their collaboration with the private sector to identify market-based approaches that can address some of the vexing development challenges that countries face along their self-reliance trajectory. This includes supporting the development of market systems across sectors; expanding opportunities for U.S. firms; and aligning with private enterprises as co-creators of market-oriented solutions with shared risk and shared reward.

**c. Develop a Transition Plan to Evolve Approaches as Self-Reliance Grows**

*Text highlighted in yellow indicates that the material is new or substantively revised.*

As part of the process of developing a CDCS, all Bilateral and Regional Missions should plan to evolve—or “transition”—their approach as the government, civil society, and the private sector in the partner country—or, in the case of an RDCS, partner countries— builds self-reliance. The overall concept of transition planning aligns with principles set forth in the NSS, the JSP, and [USAID’s Policy Framework](#), as well as related directives in the Agency’s annual appropriations. Because the requirements in appropriations bills change on an annual basis, any Mission that is initiating the development of a CDCS should consult with GC or an RLO on the current status of Congressional directives with respect to transition planning and how a CDCS must address them.

For most USAID Missions, planning for transition will be a long-term endeavor. However, for a subset of Bilateral Missions that operate in countries that demonstrate relatively advanced levels of self-reliance, Missions must plan for a type of transition planning called “strategic transition” during the period of the CDCS itself. Specifically, these designated Bilateral Missions must leverage the process of creating their CDCSs to identify how they will shift their assistance relationship from a donor-recipient dynamic to one of enduring economic, diplomatic, and security partnership. Such strategic transitions do not necessarily signal the end of USAID’s engagement, but, more typically, its evolution to a new relationship. PPL must consult with Regional Bureaus to identify and designate countries that have relatively advanced levels of self-reliance and where it might be appropriate for the Agency to plan for a strategic transition to occur.

General opportunities to change the nature of USAID’s relationship with a partner country could include, but are not limited to, transitioning out of specific sectors, shifting from programming to technical/policy assistance, and leveraging other resources and development actors, among other options. For designated “strategic-transition” countries, opportunities could also include, but are not limited to, building stronger security alliances, commercial ties, and/or trilateral cooperation as the partner country becomes a donor and international leader.

For additional guidance on transition planning, including strategic transitions, see [ADS 201mak, Country Transition Planning](#). [ADS 201mag, Process for Developing and Approving a Country Development Cooperation Strategy \(CDCS\)](#) also provides customized guidance for Bilateral Missions undertaking a strategic transition in Section VI.

**d. Engage Local Partners Meaningfully Throughout the Process of Developing a Country Development Cooperation Strategy**

A core tenet of the vision of self-reliance is building the commitment and capacity of local partners to chart and finance their own development paths and implement their own development solutions. To this end, Missions should

*Text highlighted in yellow indicates that the material is new or substantively revised.*

collaborate meaningfully with local partners throughout the process of developing a CDCS to ensure self-reliance is a shared priority, and that the final CDCS reflects a shared commitment to change. This engagement should include dialogue with the partner-country governments, the private sector, civil society, faith-based and community organizations, multilateral organizations, regional institutions, and others. As part of this engagement process, Missions should also make efforts to look beyond their traditional local-partner portfolio to new collaborators, especially those with deep roots in the communities that they support and who are committed to fostering self-reliance.

### **201.3.2.9 Preparation for the Process of Creating a Country Development Cooperation Strategy**

Effective Date: 07/23/2020

The official CDCS process takes place on a prescribed timeline that should last no more than eight months. To maximize this compact process, Missions should initiate preparations prior to the official launch of the process by 1) analyzing their Country Roadmaps (or, for Regional Missions, Regional Landscape Analyses) and other data/evidence to assess their country's trajectory on the Journey to Self-Reliance (as laid out in section **201.3.2.8**); 2) engaging local stakeholders, including the partner-country governments, where relevant, to identify local priorities and potential partnerships; and 3) beginning to conduct the three mandatory analyses (gender, tropical forest and biodiversity, and climate change). In addition, Missions should undertake other work to assess, review, and/or synthesize evidence and lessons-learned from program implementation and other sources to inform strategic choices and priorities for their CDCS.

For additional guidance on preparation for the CDCS process, see [ADS 201maq, Process for Developing and Approving a Country Development Cooperation Strategy \(CDCS\)](#) and [ADS 201maz, Process for Developing and Approving a Regional Development Cooperation Strategy \(RDCS\)](#) for Bilateral Missions and Regional Missions, respectively.

### **201.3.2.10 Overview of the Process for Creating a Country Development Cooperation Strategy**

Effective Date: 07/23/2020

The official CDCS process includes a series of milestones and associated timeframes to facilitate an iterative dialogue between Missions and USAID/Washington that results in clear decisions and, ultimately, the Agency's endorsement of a Mission's final CDCS. The total process should take no more than eight months. As described in section **201.3.2.9**, Missions should initiate preparations prior to the launch of this process to maximize this period of time.

The official CDCS process consists of three phases:

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- **Phase One: Initial Consultations and Parameter-Setting:** During Phase One, Missions initiate a formal dialogue with relevant Washington Bureaus and Independent Offices (B/IOs) and interagency stakeholders to ensure that subsequent drafts of the CDCS reflects a corporate view of Washington's expectations. In addition, they discuss the self-reliance strengths and weaknesses in their partner countries based on their assessment of the Country Roadmap (or, in the case of Regional Missions, Regional Landscape Analysis). This phase culminates in agreement between the Mission and Washington on priorities, sectoral focus, and other parameters for a CDCS that will foster self-reliance. It also results in agreement on the Mission's plan for developing the CDCS during Phases Two and Three.
- **Phase Two: Development of a Results Framework:** During Phase Two, Missions finalize key analyses, assess evidence and/or other types of information, engage with local stakeholders and relevant Washington B/IOs to establish their initial development hypothesis; prepare the Summary Paper and Matrices annex for their Results Framework (linked back to the Country Roadmap or, in the case of an RDCS, a Regional Landscape Analysis from Phase One), the two required annexes; and outline the next steps to prepare a full CDCS. This phase culminates in Agency agreement on the approaches the Mission will use to advance its strategic goal and the Journey to Self-Reliance, budget scenarios that reflect strategic priorities, and an organizing framework that will inform the subsequent development of the PMP (see section **201.3.2.15**), projects, and activities (see sections **201.3.3** and **201.3.4**).
- **Phase Three: Preparation and Approval of the CDCS:** During Phase Three, Missions apply findings from additional analyses and consultations, further refine their strategy, and prepare and submit a full CDCS. This phase culminates in the final approval of the Mission's CDCS by the responsible Regional Bureau AA and the AtA for PPL.

Within 30 days of final CDCS approval, Missions must submit their final CDCS for dissemination through the internal USAID websites [ProgramNet](#) and [USAID Pages](#). In addition, Missions must submit a public version that does not include any Sensitive but Unclassified information for dissemination through two external USAID websites, [USAID.gov](#) and the [Development Experience Clearinghouse \(DEC\)](#). The Regional Bureau AA and the AtA for PPL must also approve this version. Both the internal and public versions of the CDCS must be compliant with [ADS 551](#).

For detailed guidance on the process for developing a CDCS and associated timeframes and deliverables, see [ADS 201mag, Process for Developing and Approving a Country Development Cooperation Strategy \(CDCS\)](#) and [ADS 201maz, Process for Developing and Approving a Regional Development Cooperation Strategy \(RDCS\)](#).

*Text highlighted in yellow indicates that the material is new or substantively revised.*

### 201.3.2.11 Overview of the Content of a Country Development Cooperation Strategy

Effective Date: 10/28/2020

A CDCS should be no more than 35 pages long, excluding annexes. The RDCS should be 20 to 25 pages long, excluding annexes. The life of both an RDCS and CDCS is typically five years; however, variations are sometimes appropriate, particularly in countries or regions characterized by recurrent crises and/or instabilities.

A CDCS includes the following sections:

- I. Executive Summary—A high-level summary of the CDCS, coupled with a diagram of the Results Framework that provides a snapshot of intended results.
- II. Country or Regional Context—A description of the factors that informed the Mission’s approach to its CDCS. This should include a description of the partner country’s self-reliance assessment, as reflected in the Country Roadmap or Regional Landscape Analysis; overarching U.S. foreign-policy, economic, and national-security considerations; the needs and priorities in the partner countries; and other circumstances in the development context, in addition to identified gaps in knowledge of the country or regional context. For most Bilateral Missions, this section must also include a sub-section on country transition planning (see section **201.3.2.8** and [ADS 201mak, Country Transition Planning](#) on the Country Transition Plan).
- III. Strategic Approach—A high-level description of the Mission’s approaches to advance the country’s Journey to Self-Reliance in view of the country or regional context, the Country Roadmap or Regional Landscape Analysis, the U.S. Government’s principles for foreign assistance, and available established good practices for building self-reliance (see section **201.3.2.8** on the Journey to Self-Reliance in the CDCS). This should include a description of the role of the partner-country governments, the private sector, civil society, faith-based and community organizations, multilateral organizations, regional institutions, interagency partners and others, and mechanisms to align or coordinate efforts as relevant.

All Missions should address countering malign external influences, such as from the People’s Republic of China, the Russian Federation, and the Islamic Republic of Iran. In addition, Missions that are operating in countries listed on the Tier 2 Watch List or Tier 3 in the [Trafficking In Persons \(TIP\) Report](#) must address TIP in their CDCS and Missions that are operating in countries listed on Tier 1 (Countries of Particular Concern) and Tier 2 of [USCIRF’s Annual Report](#) and/or the Department of State’s [Report on International Freedom](#) must address religious freedom in their CDCS.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- IV. Narrative Results Framework—A narrative description of the Mission’s goal and the development hypotheses that underpin each DO in the Mission’s Results Framework. This includes the Mission’s hypothesis regarding the causal relationships between each of the IRs that lead to the DO, and how success in advancing the subject DO will contribute to overall national self-reliance. It also identifies key actors or institutions that are critical to the DO’s self-reliance trajectory and major assumptions and/or risks that could affect the success of the hypotheses. Regional Missions must also include a justification for the need for, or value-add of, regional programming in the proposed focus areas.
- V. Monitoring, Evaluating, and Learning—A high-level description of the Mission’s overall priorities and approaches to monitoring, evaluation, and learning (MEL) and Collaborating, Learning, and Adapting (CLA). This includes how the Mission and partners will use MEL and CLA to understand whether and how approaches are building the capacity and commitment of local actors and institutions and fostering national self-reliance. This description should also identify and prioritize any knowledge gaps to address. This section, together with the Summary Paper and Matrices annex to the Results Framework, should inform the subsequent development of the PMP (see section **201.3.2.15** on the PMP).
- VI. Program Resources and Priorities—A description of the Program budget resources that represent policy and strategic priorities and are needed to advance the objectives of the CDCS, including the Mission’s preferred prioritization for the use of these resources. This section could also include discussion of staffing resources, as appropriate.
- VII. Management Resources and Structure—A discussion of the management considerations (both opportunities and challenges) that could affect the Mission’s ability to support a country’s Journey to Self-Reliance. This section could also include discussion of staffing considerations, as appropriate. This section is required for CDCSs, but optional for RDCSs.
- VIII. Annexes:
- A. For Bilateral Missions, the Journey to Self-Reliance Country Roadmap—USAID’s primary analytical tool to assess and visualize self-reliance for the subject country (see section **201.3.2.8** on the Country Roadmaps).
  - B. Climate-Change Analysis—One of the mandatory analyses for a CDCS. (See [ADS 201mag, Process for Developing and Approving a Country Development Cooperation Strategy \(CDCS\)](#) and [ADS 201maz, Process for Developing and Approving a Regional Development Cooperation Strategy \(RDCS\)](#) on the mandatory analyses.)

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- C. Two Budget Scenarios—A base scenario based on historical funding levels and one that reflects an optimal distribution of funding focused on maximizing a zero-based, self-reliance-driven approach, irrespective of history, Congressional directives, mortgages, or pipeline.
- D. Table to Map the CDCS to the NSS, JSP, and ICS—A table that maps the objectives of the CDCS to that of other U.S. Government Strategies (see section **201.3.2.6** on other U.S. Government Strategies).
- E. Index of Existing and Planned Projects—A preliminary plan for designing projects **and standalone activities** under the new CDCS and realigning current projects as appropriate (see section **201.3.2.7** on the relationship between strategies, projects, and activities).
- F. Summary Paper and Matrices for the Results Framework—An annotated version of the Results Framework initially submitted during Phase Two of the process for developing the CDCS. This annex, together with the MEL section, should inform the subsequent development of the PMP (see section **201.3.2.15** on the PMP).
- G. CDCS Scenarios, if applicable—A set of scenarios to facilitate adaptive management during implementation in country contexts characterized by a high level of uncertainty.
- H. For Regional Missions, a Regional Operations Map—A table and subsequent narrative to outline the Mission’s current footprint, including its geographic area of focus, its current priority areas, and the support services it provides.
- I. For Regional Missions, a Bilateral Programming Annex—An outline of the Mission’s bilateral programs, including its bilateral programs in non- and limited-presence countries.
- J. **For Regional Missions, attach the final Regional Optimization Action Plan.**

See the [CDCS Outline](#) and the [RDCS Outline](#) for detailed descriptions of each of these required sections for Bilateral and Regional strategies, respectively.

**201.3.2.12 The Results Framework and Associated Development Hypotheses**  
Effective Date: 10/28/2020

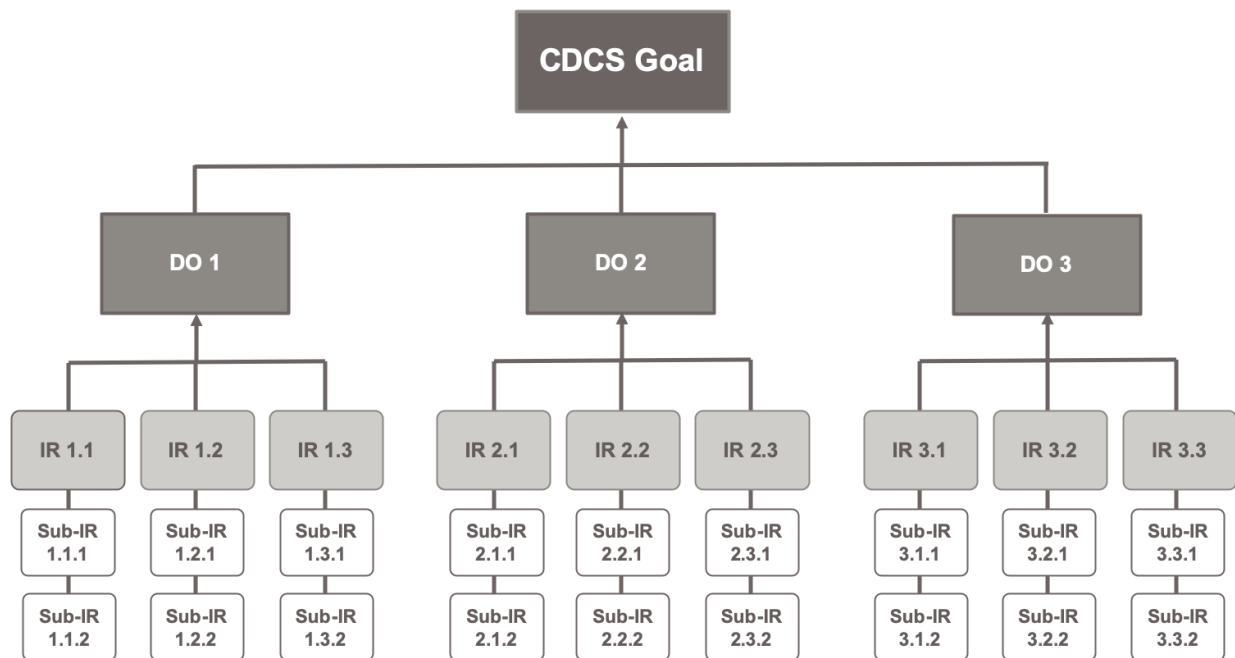

**a. The Results Framework (RF)**

At the center of a Mission’s CDCS is the Results Framework (RF). The RF is a type of logic model that shows the results that USAID, in collaboration with its partners, expects

*Text highlighted in yellow indicates that the material is new or substantively revised.*

to contribute to or achieve during the strategy period. The RF must include the following: 1) a Goal; 2) up to four DOs in support of the Goal; and 3) a set of complementary IRs in support of each DO. The RF should also include sub-IRs that contribute to each of the IRs. The RF is organized as a vertical flow chart, with boxes and arrows, to show the assumed causal and/or sequential connections that link each of these results. As described in section **201.3.2.8**, the CDCS, as reflected in the RF, must reflect the strategic approaches that the Mission has identified to advance self-reliance in each partner country, grounded in the Country Roadmap or Regional Landscape Analysis and other secondary metrics as appropriate.

The following graphic illustrates the structure of a typical RF:

The RF is not a complete representation of a full CDCS. It is a snapshot useful for the purposes of planning, implementation, and communication, supported by accompanying narratives of the Development Hypotheses that is the foundation of each CDCS. The Mission must update its RF during the period of a CDCS to respond to new evidence or changes in context (including through the implementation of projects and activities), and should be dynamic, rather than fixed.

For Missions that operate in highly volatile contexts, an RF, as defined here, might not be practical, as quickly changing conditions might not allow for definitive statements on results. In these cases, customizing the RF could suit the Mission’s needs better. For example, a customized RF could identify and explain an overall aspirational Goal with Special Objectives that articulates broad lines of effort, rather than detailed expected

*Text highlighted in yellow indicates that the material is new or substantively revised.*

results specified by a more traditional Framework. Missions that are considering customizing an RF must consult with their Regional Bureau and PPL as early as possible.

Once the Agency has approved a CDCS, the RF provides Missions with a communications device to show stakeholders at a glance what the Strategy is about. The RF also serves as an organizing framework for the Mission's MEL and adaptation approaches (see section **201.3.2.15** on the Performance-Management Plan). Finally, the RF provides a guide for subsequent project **and activity** design processes aimed at operationalizing its results (see section **201.3.2.7** on the alignment of the CDCS and subsidiary projects **and activities**).

Definitions for each type of result appear below:

- **Goal:** The highest-level result a Mission, together with the partner-country governments, civil-society actors, multilateral organizations, regional institutions, and other development partners, will advance in support of the Journey to Self-Reliance. The Goal should be practical and reflect the priorities of the broader U.S. Government and the Mission, particularly the vision for self-reliance. While USAID is not solely accountable for achieving the Goal, the CDCS should provide a guidepost for strategic choices.
- **DOs:** The most ambitious results toward which a Mission, together with its development partners, can contribute. DOs reflect specific development problems a Mission intends to address in support of a country's self-reliance trajectory and the CDCS Goal. Informed by evidence and analysis, Missions may focus DOs on a particular sector, a geographic region, a targeted population, a local system, or a combination of these factors. DOs may also integrate the efforts of various technical sectors. Missions must ensure their DOs align to at least the three primary guiding principles of U.S. foreign assistance:
  - Win the Great Power competition;
  - Share foreign-aid burdens fairly and focus aid on friends and allies; and
  - Graduate countries and organizations from foreign assistance.
- **IRs:** Lower-level results that, when combined, are expected to contribute to the advancement of a DO. IRs should be specific and measurable. IRs are the highest-level results for which USAID is accountable for reporting. A Mission must identify at least one illustrative performance indicator to monitor progress toward the achievement of each IR. The RF Matrix must include illustrative indicator(s) for each IR.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- Sub-IRs: Lower-level results that, when combined, are expected to contribute to the advancement of an IR. Missions must identify sub-IRs during Phase Two in the RF Matrices and should include them in the final RF graphic; however, Sub-IR narratives are not required in the final CDCS. A Mission must identify at least one illustrative performance indicator to monitor progress toward the achievement of each sub-IR. The RF Matrix must include illustrative indicator(s) for each sub-IR.

In addition to these standard elements, there are two types of objectives that Missions may use in addition to, or in lieu of, traditional DOs, as agreed-upon with USAID/Washington:

- Special Objectives (SpOs): A type of DO that is more flexible for purposes of addressing or acknowledging unique or extenuating circumstances. For example, depending on agreements reached with USAID/Washington, some Missions may use SpOs to reflect strategically important programs that do not fit into the Mission's Goal statement, including programs that have been externally mandated or deemed essential. Other Missions may use SpOs for time-limited programs that will not last the duration of the CDCS. In addition, Missions that operate in highly fluid contexts may use SpOs to articulate broad lines of effort rather than a specific result specified in a more traditional RF. In addition, Missions in countries with protracted crises and/or instability should consider including an SpO in their CDCS that addresses humanitarian, transition, and/or stabilization issues. Missions that want to customize the RF to include Special Objectives in lieu of traditional DOs must consult with the relevant Regional Bureau and PPL as early as possible. SpOs typically count toward a Mission's limit of four DOs.
- Support Objectives: A type of DO that reflects services a Mission will provide to other Missions in its region. Because Support Objectives focus on management, rather than the implementation of program resources, they do not count toward the DO limit.

## **b. The Development Hypotheses**

Each DO in the RF depends upon a Development Hypothesis that underpins the results presented in the Framework. The Development Hypothesis, or "theory of change," describes how and why USAID believes it will achieve a particular high-level development result in a given context and what it will take to achieve these outcomes. The Development Hypothesis consists of a Development Hypothesis Statement and a Development Hypothesis Narrative. The Development Hypothesis Statement is generally an "IF-THEN" statement that explains how results will lead to a high-level outcome or change. The accompanying short narrative explains the causal logic and the relationships between results upward from the sub-IRs, to the IRs, to the DOs. The Development Hypothesis Statements and Narratives, taken together, must include four

*Text highlighted in yellow indicates that the material is new or substantively revised.*

key characteristics:

- A clear articulation of the developmental logic (from development theory, experience from implementation, and other evidence—such as the Country Roadmap, Regional Landscape Analysis, and secondary metrics) a Mission believes should lead to the development results;
- A brief explanation of how USAID will leverage national or institutional commitment and/or capacity at the DO level, or conversely, where the Mission will make efforts to address the deficits that hold the country back;
- A general statement on USAID’s role in achieving these results; and
- A reflection of key assumptions or risks that could affect the success of the hypothesis.

Missions must also account for actors whose involvement are critical to helping USAID achieve the stated results (e.g., government, civil society, the private sector, or other donors) in their Development Hypotheses. Accounting for all actors in the Mission’s particular development context can help explain how USAID will advance its goals and objectives, even if a Mission’s own capacity and resources are limited.

Results should be part of the Development Hypotheses and Results Framework even if USAID will not spend any Program funds directly to obtain them (such as policy reform that comes from the influence of USAID staff rather than the investment of Program funds).

While it is not necessary, nor practical, for a Mission to have complete knowledge about the context in which it is operating, the Development Hypotheses must articulate the Mission’s best understanding of the specific problems it seeks to address and ensure available evidence supports its choice of approach. As appropriate, Missions should also identify any gaps in its knowledge that could affect its RF and document those in the MEL section of the CDCS. Missions must also be explicit about any assumptions implied in the hypotheses, and plan to monitor and revisit these assumptions regularly. Scenario-planning could be helpful for Missions that seek to address development challenges that hinge on specific, but uncertain, outcomes.

### **201.3.2.13 Overview of Implementing a Country Development Cooperation Strategy**

Effective Date: 10/28/2020

Mission Directors are responsible for managing the implementation of a CDCS and identifying an appropriate management structure to advance its objectives most effectively. USAID promotes the use of multi-functional teams (teams that intersect various offices within the Mission) to ensure collaboration and synergy in support of a

*Text highlighted in yellow indicates that the material is new or substantively revised.*

CDCS's objectives. They may do so through the creation of DO Teams, in addition to **project teams, where applicable.**

The duties and responsibilities of a Mission Director and associated management teams in implementing a CDCS include, but are not limited to, the following:

**a. After Approval**

- **Identify (or revalidate) the initial portfolio of projects and/or standalone activities that will implement the CDCS (see section 201.3.2.14).**
- Develop an initial PMP within three months of the approval of a CDCS (see section **201.3.2.15**).
- If applicable, negotiate a DOAG agreement with the partner-country governments or amend the existing DOAG (see **ADS 201.3.2.19**).
- Realign existing projects as appropriate and begin designing new projects **and/or activities** in support of the Country Roadmap and the results in the RF (see section **201.3.2.11** regarding the Index of Existing and Planned Projects).
- Ensure the State-USAID ICS reflects the CDCS's Development Objectives (see section **201.3.2.6** regarding the alignment of a CDCS with an ICS).
- Identify the most appropriate management structure(s) to implement the CDCS effectively (see **ADS 201sam, Section 11** regarding project teams).

**b. Oversight**

- Oversee the design, management, and measurement of projects **and/or** activities, and ensure their cohesiveness in achieving the objectives of the CDCS and the results in the RF.
- Amend and/or update the CDCS and associated PMP as necessary (see sections **201.3.2.21** and **201.3.2.15**, respectively).

**c. Planning, Budgeting, and Reporting of Foreign Assistance**

- Use the objectives of the CDCS, as reflected in the ICS, as the basis for the annual Mission Resource Requests (MRRs); Operational Plans; Congressional Budget Justification; and other planning, budgeting, and reporting processes.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

d. Monitoring, Evaluation and Learning

- Monitor the implementation, progress, performance, results, and operational context of the CDCS.
- Track performance indicators described in the PMP (see section **201.3.2.15** for requirements for indicators).
- Ensure that associated efforts in monitoring, evaluation, and CLA at the project or activity levels are consistent with, and meet, the PMP's data-collection needs.
- Update the PMP to reflect changes or updates to baselines, targets, or indicators.
- Plan and implement evaluations pursuant to the requirements described in section **201.3.5.13**.

e. Collaborating, Learning and Adapting

- Facilitate collaborative learning, both internally in the Mission and among implementing partners and local stakeholders, through periodic meetings with partners, learning networks, and/or topical communities of practice, among other means.
- Assess and/or revalidate continually the CDCS's strategic approach through MEL activities such as portfolio reviews, stocktaking, and engagement with stakeholders.
- Conduct at least one strategy-level portfolio review per year that focuses on progress toward strategy-level results (see section **201.3.2.18**).
- Conduct at least one CDCS Mid-Course Stocktaking during the life of the Strategy to align implementation with changes in the context and the Agency's direction (see section **201.3.2.18**).
- Based on learning, adjust the implementation of the CDCS as appropriate (see section **201.3.2.21**).

**201.3.2.14 Identifying the Portfolio of Projects and/or Standalone Activities**

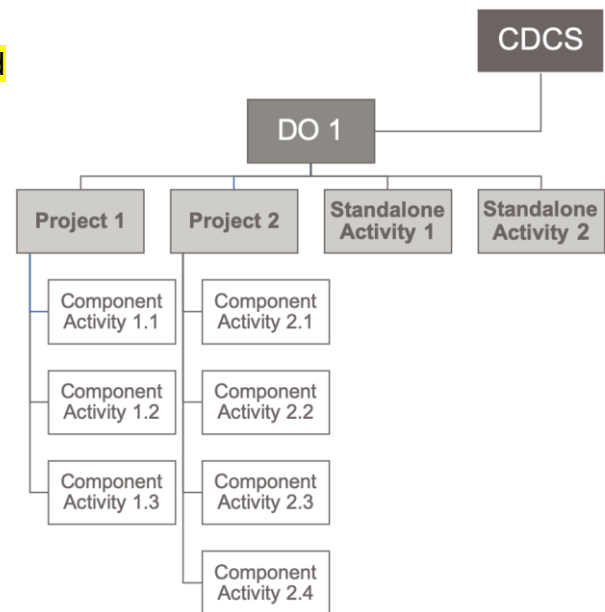

Effective Date: 10/28/2020

After approval of a CDCS, Missions must exercise professional judgment to determine an initial portfolio of "projects" and/or "standalone activities" that will effectively advance

*Text highlighted in yellow indicates that the material is new or substantively revised.*

the high-level objectives set forth in the CDCS. As part of this determination, Missions should consider whether to retain legacy projects and activities from their previous CDCS in their current constructs or realign them into new projects and/or standalone activities. In making all these judgments, Missions should take into account the Index of Existing and Planned Projects that is annexed to the CDCS and that provides a preliminary plan with respect to these decisions (see section **201.3.2.11** on content of the CDCS).

- A “project” refers to a group of activities designed and managed in a coordinated way to advance identified result(s) set forth in a CDCS. The use of projects is voluntary. However, where a project approach is used, Missions should follow guidance on the design and implementation of projects in section **201.3.3** and [ADS 201sam, Project Design and Implementation Process](#).

- A “standalone activity” refers to an activity not bundled with other activities under a project approach; however, like projects, standalone activities should similarly support identified result(s) set forth in a CDCS. For these activities, the project-design guidance in section **201.3.3** does not apply.

Under both scenarios, Missions must: 1) follow guidance on the design and implementation of activities in section **201.3.4**; and 2) approve activity designs through Activity Approval Memorandums (AAMs) that briefly describe how the activity supports the achievement of measurable results in a project and/or CDCS (see [ADS 201mai, Activity Approval Memorandum \(AAM\)](#)).

**Subsection A** below provides non-mandatory guidelines on how to determine when a project approach might be the most appropriate means to advance CDCS results. **Subsection B** conversely describes when standalone activities might be more appropriate. Ultimately, projects are optional.

### A. Considerations for When to Use a Project Approach

A project approach is a voluntary organizational framework that—when used as intended—can help Missions design and manage complementary activities in a coordinated way to generate higher-level results than individual activities can achieve. The initial project design process provides teams with an opportunity to conduct a higher-order analysis and engage diverse local actors to inform the design of multiple

*Text highlighted in yellow indicates that the material is new or substantively revised.*

activities. After a project is approved, the establishment of a project-implementation team can support ongoing collaboration to ensure that component activities are synergistically designed and managed to achieve project success.

With this in mind, Missions should consider the following questions to help them determine whether a project approach might be the most appropriate means to advance a given result or set of results in their CDCS:

- Will supporting activities address a shared development problem? Will they seek to advance the development of a common local system or network of institutions? Will they contribute to a shared theory of change? (If not, should they?)
- Will there be interdependencies between supporting activities that will need to be coordinated?
- Will there be major risks that will span across activities that will need to be managed?
- Are there learning questions that will span across activities that a coordinated approach to monitoring, evaluation, and CLA could help address?

In considering all of these questions, Missions may also ask whether a project approach could help facilitate linkages between results in the CDCS and the portfolio of activities thereunder. This could be the case for large, complex portfolios.

For identified projects, Missions should follow the guidance on the design and implementation of projects in section 201.3.3 and [ADS 201sam, Project Design and Implementation Process](#). In addition, Missions must design and implement component activities concurrent with, or subsequent to, the project-design process, as described in section 201.3.4.

## **B. Considerations for When to Use Standalone Activities**

Like projects, standalone activities should also contribute to the achievement of higher-order, measurable results set forth in a Mission's CDCS. In addition, Missions should similarly ground standalone activities in self-reliance by advancing approaches that work through local actors, partners, institutions, and systems; diversify USAID's partner base; and champion locally led and funded development. Unlike projects, however, standalone activities are not designed and implemented under a project construct.

With this in mind, "standalone activities" tend to be more appropriate under the following scenarios:

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- Activities designed under the previous CDCS;
- Activities implemented under certain Washington initiatives, Congressional directives, or political mandates for which there is limited flexibility to support a more integrated approach;
- Activities that, in large measure, represent a continuation of the previous strategic direction and carrying over into the new strategy period; and
- Activities implemented in small Missions with relatively simple portfolios.

For identified standalone activities, the guidance on designing projects in section **201.3.3** does not apply, and Missions may proceed directly to design and implement activities according to section **201.3.4**.

### **201.3.2.15 Performance-Management Plan (PMP)**

Effective Date: 10/28/2020

A PMP is a Mission-wide tool for planning and managing the processes of monitoring strategic performance, programmatic assumptions and risks, and operational context; evaluating performance and impact; and learning and adapting from evidence. The PMP, together with Activity MEL Plans, ensure USAID meets the FATAA's requirement to establish annual objectives for monitoring and evaluation and timetables to plan and manage the process of monitoring, evaluating, analyzing progress, and applying learning toward achieving results.

Each Mission must prepare a Mission-wide PMP and update it at least once a year. Missions should use and update PMP information during portfolio reviews and the mid-course stocktaking of the CDCS. Missions that do not have a CDCS are still required to have a PMP that covers any projects they fund. Missions should use a PMP to inform their allocations of resources and management decisions.

A PMP must be grounded in the development hypotheses, objectives, learning questions, and results framework of a Mission's CDCS, and in the Mission's operating context. It articulates learning priorities, expected programmatic results, and a Mission's approach to using monitoring, evaluation, and CLA to understand progress toward results. It informs management decisions that support the national self-reliance objectives of the CDCS. It also should include plans for monitoring, evaluation, and CLA activities and approaches to build the capacity and commitment of local partners. Missions should ensure that the PMP reflects ongoing processes and adjusts as necessary to new evidence, learning, and changes in assumptions, risks, and the local context to remain effective throughout implementation.

A PMP is not required to be a single document, and its content may exist in different tracking systems or databases. While the PMP is primarily a tool for a Mission to use

*Text highlighted in yellow indicates that the material is new or substantively revised.*

internally for performance management, Missions should create a public summary of the PMP and share portions of it with partners (including the host-country government, other donors, and implementing partners).

See [How-To Note: Prepare and Maintain a Performance Management Plan \(PMP\)](#) for additional guidance.

A Washington OU may use the guidance in this section to develop a PMP for the management of its portfolio.

#### **a. Content of the PMP**

The content of the PMP must include the following:

- Table of Contents and Modification Log. This document describes each required part of the PMP, and links to that information if it is in different systems. It also provides a log of modifications over time.
- Identification of Learning Priorities and Plan to Address Them with Monitoring, Evaluation, and CLA. This document identifies the PMP's initial learning priorities, which are a short list of themes or topics critical to CDCS programmatic and operational decisions and implementation. Missions may base their learning priorities on CDCS learning questions. They could identify how the Mission will validate its development hypotheses and results framework articulated in the CDCS, and implications for achieving and understanding progress toward results. Missions should consider whether to include learning priorities related to relevant questions or sub-questions from [USAID's Agency-wide or Sector-based Learning Agendas](#). In this document, Missions also must describe how they plan to address the PMP's learning priorities including through efforts in monitoring, evaluation, CLA, and/or other studies, research, or analysis.
- Performance Indicators for Intermediate Results (IR). Each IR in the CDCS must have at least one performance indicator. Missions must document their performance indicators in a Performance Indicator Reference Sheet or their indicator-tracking table or system and must indicate the unit of analysis, any disaggregates, baseline data where available (or note the plan for collecting baseline data), and actual data. Missions may also choose to include applicable Standard Foreign Assistance Indicators and context indicator information in their PMP indicator-tracking system. Beginning in Fiscal Year 2021, USAID OUs must use the Agency-wide Development Information Solution (DIS) for storing information on performance indicators.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- Evaluation Plan. List of Evaluations planned during the life of the CDCS. This information should be located in the Mission's Evaluation Registry in the FACTS Info Next Gen system.
- Schedule of Performance-Management Tasks and Associated Resources. In this section, a Mission must identify the performance-management tasks it expects to conduct over the life of the CDCS and should include information on the timeline for each task, who is responsible, and an estimate of human and financial resources needed to accomplish it. Note that funding for evaluation should total one to three percent, on average, of a Mission's program funds. Program-monitoring and CLA activities could require another three to ten percent, on average, of Program funds.

Typical performance-management tasks in the schedule include, for example, collecting and analyzing data; reviewing monitoring processes, roles and responsibilities; assessing the quality of data; designing and conducting evaluations as planned, needed, and/or required; and preparing for portfolio reviews and the mid-course stocktaking of the CDCS. Missions may create this information for the PMP or include it in their existing calendar of tasks if one already exists. For additional guidance, see the [PMP Task Schedule Guidance and Template](#).

#### **b. Approval of the Performance-Management Plan**

Each Mission must prepare an initial Mission-wide PMP, which must reflect the current status for all its required content. The Mission Director must approve the initial PMP within three months of the approval of a CDCS. A Mission Director may make a one-time exception to the three-month timeline, which may not exceed an additional 60 days, and must inform PPL/LER and the appropriate Regional Bureau Program Office of the reason for the extension and the date the initial PMP is expected to be approved.

A Mission must update the content of a PMP continually over the life of a CDCS to include new information as they design projects and activities, and to account for other changes in context, performance-management, and learning needs.

Missions should track initial clearance and subsequent updates to the PMP in the Table of Contents and Modification Log.

Upon initial PMP approval, Missions must upload the Table of Contents and Modification Log and the Learning Priorities and Plan to Address Them with Monitoring, Evaluation and CLA to ProgramNet, and inform their Regional Monitoring and Evaluation Points of Contact and the PPL Office of Learning, Evaluation, and Research.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

### **c. Modifying the Performance-Management Plan**

The Mission must review the PMP at least once per year as part of its portfolio-review process and as described in the Schedule of Performance-Management Tasks, and should make any needed updates at that time, including any adjustments to learning priorities and learning questions. Missions may make updates more often, as needed.

In addition, Missions must keep the PMP up-to-date to reflect changes related to the CDCS or programming, including to the operating context, risks and assumptions, development hypotheses, results framework, learning priorities, or project and activity logic models. Missions must update the PMP or associated indicator-tracking table and Evaluation Registry with new indicators, newly planned evaluations, and new learning activities, as applicable, as each new project or activity is approved. The Mission Director is not required to approve updates to the PMP.

#### **201.3.2.16 Monitoring During the Implementation of Country Development Cooperation Strategies**

Effective Date: 10/28/2020

USAID has a responsibility to monitor strategic performance. Throughout implementation, Missions should ensure that performance monitoring and context monitoring are adequate to facilitate evaluation, strategic learning, and adaptive management during the implementation of their CDCSs. This includes understanding progress toward achieving strategic objectives, fulfilling reporting requirements, and supporting the Journey to Self-Reliance.

Missions must monitor progress, at a minimum, by tracking performance indicators for each IR. In addition, Missions should monitor operational context and any key risks identified during CDCS planning in the Mission's annual Risk Profile that could affect the achievement of programmatic results. Program Officers are responsible for working with technical offices to ensure the planned collection and updating of indicators and monitoring data, as described in the PMP, takes place on time; that partners deliver the data to USAID; and that the data are of sufficient quality for the purposes of accountability, learning, and managing adaptively (see section **201.3.5.7** for data-quality standards).

#### **201.3.2.17 Evaluation During the Implementation of Country Development Cooperation Strategies**

Effective Date: 10/28/2020

Throughout implementation of their CDCSs, Missions should ensure that evaluation efforts build from monitoring efforts and are adequate to facilitate strategic learning and

*Text highlighted in yellow indicates that the material is new or substantively revised.*

adaptive management to ensure they are achieving strategic objectives and supporting progress on the Journey to Self-Reliance.

Sections **201.3.6.7** and **201.3.6.8** describe evaluation requirements and procedures for planning and implementing an evaluation. Although evaluations that address strategic-level concerns are best planned during the development of a CDCS, a Mission may make a decision to evaluate at any point during the implementation of a strategy, particularly if new information arises that indicates that an evaluation is appropriate for accountability or learning purposes.

**201.3.2.18 Collaborating, Learning, and Adaptive Management During Implementation of Country Development Cooperation Strategies**  
Effective Date: 10/28/2020

During the implementation of a Strategy, a Mission generates knowledge and learning by overseeing projects and activities; participating in learning activities, such as portfolio reviews and stocktaking exercises; conducting monitoring, evaluation, and other research, analysis, and learning activities as described in the PMP; engaging stakeholders; and making use of the experiential knowledge of staff, partners, and counterparts, among other activities. Based on this learning, the Mission should make changes to the strategic implementation of its programs as needed, by paying particular attention to the Mission's support for national self-reliance.

**a. Portfolio Reviews**

Portfolio reviews are opportunities for Missions, including [regional platforms](#), to periodically examine all aspects of the Mission's Strategy, projects, or activities. Missions must conduct at least one portfolio review per year that focuses on progress toward Strategy-level results. Missions should consider addressing the following topics during portfolio reviews:

- Progress toward achievement of CDCS and project results and expectations regarding future progress, by focusing on supporting a country's Journey to Self-Reliance;
- Country and regional trends and how the context is evolving, including trends in national self-reliance indicated by annual updates to the Country Roadmap, secondary Journey to Self-Reliance metrics, and other relevant sources of contextual data;
- Review, update and revalidate the status of key risks, critical assumptions, and/or changes in context, along with related implications for the performance of the CDCS and subsidiary projects and activities, where applicable;

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- The extent to which implementing partners under the Mission's purview collect and use feedback from beneficiaries;
- What USAID has learned from monitoring data, evaluations, and information from partners, beneficiary feedback, or other sources;
- Opportunities to adapt as a result of learning, including to adapt USAID programming to better address partner-country priorities;
- Resource-management to ensure all funds, including pipeline, current appropriations, and budget requests, advance the goals of the CDCS or RCDS;
- The status of cross-cutting themes;
- The allocation and management of resources to support the Mission's objectives;
- Status of actions in Post-Evaluation Action Plans (see section 201.3.6.10); and
- Challenges and next steps for improving performance.

The portfolio review during the final year of the CDCS must include a review of the cumulative achievements toward the DOs and IRs, with the results documented to support knowledge management.

After the portfolio review, the Mission should update the CDCS or PMP as needed to reflect changes in the planned activities and approaches for implementation, monitoring, evaluation, and CLA (see [How-To Note: Strategy-Level Portfolio Review](#)).

#### b. CDCS Mid-Course Stocktaking

At least once during the course of CDCS implementation, Missions must conduct a CDCS stocktaking with the objective of better aligning the implementation of the Mission's programs with changes to the context and Agency direction, as well as with emerging knowledge and lessons learned. A CDCS mid-course stocktaking fulfills the requirement for a Mission's Strategy-level portfolio review for that particular year.

A CDCS mid-course stocktaking allows a Mission and Washington OUs to understand progress to date on CDCS implementation as well as important changes in context. The Mission must develop an information memorandum,

*Text highlighted in yellow indicates that the material is new or substantively revised.*

recording any substantive changes in the country context or strategic approach, and send it to the Regional Bureau for review.

A CDCS mid-course stocktaking should do the following:

- Revalidate the RF and review evidence relevant to its underlying assumptions, including trends in national self-reliance indicated by annual updates to the Country Roadmap, secondary Journey to Self-Reliance metrics, and other relevant sources of contextual data, and identify any potential amendments to the Framework for review with USAID Washington;
- Reinforce continuity and institutional knowledge among new staff;
- Review the correspondence between the CDCS and trends in the Country Roadmaps over the period of the Strategy;
- Re-engage partner-country stakeholders and donor partners and facilitate stronger relationships with and among them, including by identifying opportunities to broaden the Mission's partner base;
- Assess progress on the country transition plan, as relevant;
- Review and update learning questions, as needed, based on learning from monitoring data, site visits, evaluations, partners, program participants, beneficiary feedback, or other sources of information to guide adaptations; and
- Look ahead to the next CDCS; including identifying future analytic needs and knowledge gaps.

The Mission must submit documentation of the stocktaking process to its Regional Bureau, which will distribute it to identified points of contact in other Washington OUs. For more information, see [How-To Note: CDCS Mid-Course Stocktaking](#) and [ADS 201mag, Process for Developing and Approving a Country Development Cooperation Strategy](#).

### **201.3.2.19 Obligation by Development Objective Agreements**

Effective Date: 10/28/2020

Many Missions obligate funds through a bilateral assistance agreement, most commonly a Development Objective Assistance Agreement (DOAG). DOAGs generally set forth a mutually agreed-upon understanding of the timeframe; results expected to be achieved and the means of measuring them; and the resources, responsibilities, and

*Text highlighted in yellow indicates that the material is new or substantively revised.*

contributions of participating entities for achieving a clearly defined objective (typically a DO). They are also bilateral obligating documents under which USAID may make sub-obligations. In most cases, the parties to the DOAG agree that USAID may sub-obligate and disburse funds directly to third-party recipients and contractors in addition to the national government. DOAGs provide Missions with a degree of adaptability to respond to changing circumstances without necessarily having to de-obligate funds.

#### **a. Commitments from Partner Governments**

The process of developing a CDCS and ultimately negotiating DOAGs presents an opportunity for Missions to rethink how they engage with partner governments to support them in achieving their self-reliance goals. Missions should leverage this process to further U.S. foreign-policy and economic objectives, increase burden-sharing, and ensure partner governments increase their commitments to addressing protracted development challenges. Missions should examine what they are asking of government counterparts—especially in terms of cost-share and policy reforms necessary to accelerate the Journey to Self-Reliance—and how Missions hold both parties accountable for results.

A DOAG is one of the key places where Missions can document partner-government agreements to make financial, policy, or in-kind contributions to address self-reliance goals. At a minimum, these contributions must satisfy requirements in Section 110 of the [Foreign Assistance Act](#), as amended. They may also include contributions that are not statutorily required. In some cases, it might be appropriate to document partner-government contributions in Implementation Letters. In addition, Missions could choose to document contributions in Memoranda of Understanding (MOUs) or multi-donor agreements with the partner government.

#### **b. Legal Requirements Prior to Obligation**

As described in section **201.3.1.8**, Missions must document compliance with legal requirements, as applicable, prior to the obligation of funds. In the case of DOAGs, obligation occurs when the DOAG is signed or amended to add funds. Missions might address some of these requirements more appropriately prior to sub-obligation into an activity-level agreement, if advised by the RLO. In such cases, Missions must document the decision for deferral with RLO clearance (see [ADS 201mad, Summary Checklist of the Legal Requirements for Obligating Funds into a Development Objective Assistance Agreement](#), and section **201.3.1.8, Legal Requirements on the Use of Funds**).

#### **c. Scope of DOAGs**

Missions should scope DOAGs such that they only cover one DO. Limiting a DOAG to a single DO can 1) ensure USAID commits, obligates, and uses funds for the DO

*Text highlighted in yellow indicates that the material is new or substantively revised.*

purpose for which they were authorized and notified; 2) facilitate proper accounting; 3) ensure a valid, binding obligation of funds; and 4) facilitate the completion of statutory pre-obligation planning requirements prior to the obligation of funds.

However, Missions could have valid reasons for entering into a DOAG that includes more than one DO. In such cases:

- Missions may not develop a DOAG “purpose” that is higher than the purposes of the separate DOs.
- Missions must commit, obligate, and record funds for each individual DO; they may not obligate funds above the level of the individual DOs.
- Missions must clearly document compliance with all legal requirements prior to signing the multi-DO DOAG, and specifically attest that 1) they are obligating and using the funds only for the purpose (DO) for which they are authorized and notified; and 2) accounting and funds controls will be adequate (*i.e.*, at the level of the individual DOs).

Given these conditions, a Mission that is considering a multi-DO DOAG should consult its RLO and Controller prior to entering into negotiations with the host-country government.

#### **d. DOAG Management Across CDCSs**

The completion date of a DOAG should generally correspond to the end date (or extended end date) of its associated DO/CDCS. Missions should generally negotiate DOAGs initially as five-year agreements so they are tied to the period of the CDCS. As there is often some delay between the approval of a CDCS and the signature of a DOAG, a DOAG may extend for a limited time beyond the CDCS.

In addition, Missions should exercise caution to ensure they do not permit DOAGs to expire while funds from the DOAG are still active in instruments. Therefore, Missions may extend the completion date of a DOAG for the purpose of expending prior-year funds that remain in the DOAG after the end date of the CDCS.

When a Mission transitions to a subsequent CDCS, it does not have to retain a DO approved in the prior CDCS. If a Mission retains a DO, it may extend the completion date of its current DOAG to correspond with the period of the subsequent CDCS. When a Mission does not incorporate an existing DO in a subsequent CDCS, it would generally not be appropriate to obligate funding that supports the subsequent CDCS into the existing DOAG.

#### **201.3.2.20 Expiration and Extension of a Country Development Cooperation Strategy**

*Text highlighted in yellow indicates that the material is new or substantively revised.*

Effective Date: 12/23/2019

CDCSs expire on the date specified in the CDCS Approval Memorandum or any subsequent CDCS Extension Memo. Extensions are not encouraged; however, in some cases, they could be justified.

There are two types of CDCS extensions:

- 1) Extensions for up to six months: Missions may use this option only once during the CDCS period. These extensions do not require clearance or approval from USAID/Washington as long as the combined duration of all extensions does not exceed two years.
- 2) Extensions beyond six months: These extensions require approval from the AtA for PPL and the relevant Regional Bureau AA based on a compelling justification.

Two years is the maximum cumulative duration of CDCS extensions.

See [ADS 201max, Regional and Country Development Cooperation Strategy Updates, Amendments and Extensions](#), for additional guidance.

### **201.3.2.21 Amending and Updating a Country Development Cooperation Strategy**

Effective Date: 10/28/2020

CDCSs should be living documents, and Missions should regularly revisit their CDCS to take stock, capture learnings, and make adjustments, as necessary. Triggers for adjusting a CDCS include, but are not limited to the following: 1) changes in the country context that prompt major shifts in programming; 2) internal changes in funding or Administration or Agency policy priorities that call for a rescoping or revision of intended results; and/or 3) recommended changes to the Development Hypotheses revealed through monitoring, evaluation, site visits, **portfolio reviews, mid-course stocktaking,** and/or learning during the course of implementation.

There are two types of CDCS adjustments:

- 1) An update: An update occurs when a Mission makes changes at the IR (or sub-IR level, if applicable) in the CDCS. Updates do not require clearance or approval from USAID/Washington. However, Missions must advise PPL and the Regional Bureau of any update.
- 2) An amendment: This occurs when a Mission makes changes at the DO or Goal level in the CDCS. Changes made to either a Special Objective or Support Objective also require an amendment, unless the change is part of a phase-out previously specified in the Strategy. Missions must obtain approval from the AtA

*Text highlighted in yellow indicates that the material is new or substantively revised.*

for PPL and the Regional Bureau AA for an amendment.

See [ADS 201max, Regional and Country Development Cooperation Strategy Updates, Amendments and Extensions](#), for additional guidance.

### **201.3.2.22 Closing out a Country Development Cooperation Strategy**

Effective Date: 12/23/2019

At the end of a CDCS, the Mission should capture and synthesize its experience and lessons learned to inform the subsequent CDCS. The subsequent CDCS does not have to incorporate DOs from the previous CDCS.

As described in **ADS 201.3.2.7**, the life of subsidiary projects and activities will often not coincide with the life of a CDCS. For Missions with DOAGs, the de-obligation of leftover funds and close-out process for a DOAG will be complete when all activities under that DOAG have closed out (see **ADS 201.3.2.19** for additional guidance on DOAGs).

### **201.3.3 Design and Implementation of Projects**

Effective Date: 10/28/2020

A “project” generally refers to a group of activities designed and managed in a coordinated way to advance result(s) set forth in a CDCS and foster lasting gains along the Journey to Self-Reliance in a country or region. Through a project approach, Missions often can create synergies among complementary activities that generate higher-level results than would be possible to achieve through the sum of their individual performances. In addition, Missions can leverage the wide range of partnering approaches or mechanisms at the Agency’s disposal more strategically to strengthen local actors, partners, systems, and institutions for greater self-reliance.

As described in section **201.3.2.14**, projects are optional. However, if Missions opt to implement an aspect of their CDCS through a project approach, they should follow guidance in [ADS 201sam, Project Design and Implementation Process](#). Guidance in this Additional Help reference is specifically aimed at minimizing internal bureaucracy while maximizing value to ensure staff have the time they need to design, implement, and monitor activities—based on evidence and continuous learning—to achieve their intended measurable results.

If Missions determine they do not need to bundle activities under a project to advance the results of their CDCS effectively, the project guidance in [ADS 201sam](#) does not apply. In this case, Missions should proceed directly to design and implement activities according to section **201.3.4**.

### **201.3.4 Design and Implementation of Activities**

Effective Date: 10/28/2020

*Text highlighted in yellow indicates that the material is new or substantively revised.*

An “activity” generally refers to an implementing mechanism that carries out an intervention or set of interventions to advance identified development result(s). Activities range from contracts or cooperative agreements with international or local organizations to direct agreements with partner governments, to development finance instruments issued by the U.S. International Development Finance Corporation (DFC), among other examples. Activities also include buy-ins under global agreements (e.g., Field Support agreements) that generate programmatic results in a given country or region. Missions and Washington OUs (hereinafter referred to as “OUs”) often complement activities with actions undertaken directly by USAID staff, such as policy dialogue, stakeholder coordination, or capacity-building (see [USAID’s Implementing Mechanism Matrix](#) for a list of common mechanisms used by the Agency).

In Missions, activities should contribute to development result(s) set forth in their CDCS(s). Activities should also contribute to project results, where applicable. According to section **201.3.2.14**, Missions should bundle activities into projects if they determine that designing and/or managing them in a coordinated way can advance the results under a CDCS and foster self-reliance most effectively (see section **201.3.2.14** for additional guidance on how to make this optional determination).

The activity-design process has two Phases:

- During Phase One: Activity-Design Planning, OUs identify a Point of Contact (POC)/Design Team to lead the design process. In addition, OUs identify or revalidate high-level parameters to guide the process (e.g., purpose, available budget, etc.). OUs may document these guiding parameters in meeting minutes or email correspondence with the Program Office, among other options. For additional guidance, see section **201.3.4.5**.
- During Phase Two: Activity Design, OUs determine how to advance intended result(s) through a given type of implementing mechanism. The design that results is ultimately approved through a brief Activity Approval Memorandum (AAM) (see [ADS 201mai, Activity Approval Memorandum \(AAM\)](#)). OUs may approve one design or multiple, complementary designs through an AAM, depending on the circumstances. In most cases, Phase Two culminates in a solicitation or finalization of an agreement. For additional guidance, see section **201.3.4.6** for A&A activities, or section **201.3.4.7** for non-A&A activities.

During the implementation of activities, OUs oversee them in accordance with the terms of their agreements and collaborate with implementing partners, local stakeholders, and other members of their project teams where applicable. They also monitor, evaluate, and learn from implementation to make decisions and course corrections as needed to yield intended results most effectively (see sections **201.3.4.8** through **201.3.4.13**).

According to [USAID’s Policy Framework](#), OUs must integrate the Agency’s vision to support the Journey to Self-Reliance in partner countries during the design and

*Text highlighted in yellow indicates that the material is new or substantively revised.*

implementation of activities. For Missions, this process should begin during the development of their CDCSs and should come into greater focus during the design and implementation of projects and/or activities (see section **201.3.4.3** for additional guidance).

#### **201.3.4.1 Roles in the Design and Implementation of Activities**

Effective Date: 10/28/2020

The design and implementation of activities is a core interdisciplinary function that requires skills and expertise that span organizational and functional boundaries. OUs therefore should promote efficient and constructive interactions between key offices and functions to ensure alignment and consistency among the technical, legal, budgetary, and managerial facets of each activity.

For activities designed and managed by Missions, roles and responsibilities include, but are not limited to, the following:

- **Mission Program Office.** The Program Office provides oversight of the Mission's processes to design and implement activities; provides Mission-specific guidance in the relevant Mission Order; ensures activities support associated projects (where applicable) and the CDCS; manages the budget-planning process to ensure funds availability for activities; advises on non-A&A mechanisms and facilitates the preparation of documentations for such mechanisms; advises on monitoring, evaluation, and CLA approaches in accordance with the guidance herein and provides additional Mission-specific guidance in the relevant Mission Order; ensures that Activity MEL Plans meet the management needs of projects, if applicable, and the data-collection needs of the PMP; oversees evaluations; coordinates and guides the Mission portfolio-review process; and oversees the Mission's development-outreach efforts associated with communicating activity results to key stakeholders in the partner country and in Washington.
- **Mission Technical Offices.** Technical Offices typically take a lead role in designing and managing activities (under the oversight of the Program Office); collaborate with the partner government and development actors in their technical sectors to ensure the alignment of activities with local priorities; assume activity-management roles (Contracting/Agreement Officer's Representative, etc.) to carry out responsibilities specified in signed designation letters; and adaptively manage activities in response to learning and evidence to support the achievement of measurable activity results (and project results, where applicable).
- **Mission Office of Acquisition and Assistance (OAA).** OAA serves as a business advisor, by providing guidance on how Missions can achieve intended results with the Agency's broad range of A&A mechanisms; reviews supporting solicitation documents prepared by the Design Team and makes the final

*Text highlighted in yellow indicates that the material is new or substantively revised.*

determination on the selection of instrument; ensures that Statements of Work or Objectives, Program Descriptions, and other A&A documents are consistent with the selected type of instrument; solicits, negotiates, awards, and administers A&A awards; delegates certain award-management responsibilities to designated Contracting Officer's Representatives/Agreement Officer's Representatives (CORs/AORs); and advises CORs/AORs during implementation on how to make programmatic adjustments where necessary to enable adaptive management, all in accordance with their delegated authority and within applicable statutes, regulations, and policies.

- Mission Office of Financial Management (OFM). OFM oversees all financial-management matters relating to Mission activities; plans and conducts pre-award financial-management risk-assessments for agreements with the partner government and/or local organizations; supports Design Teams in developing cost-estimates; provides advice or assistance to strengthen the financial-management capacity of public- and private-sector organizations, where applicable; maintains an integrated financial-management system that complies with the applicable requirements of Agency financial-management systems; organizes periodic financial reviews; supports CORs/AORs with required financial documentation, such as analyses of forward funding and pipelines; and monitors the financial execution of the Mission's budget in relation to actual expenditures.
- Mission's Executive Office (EXO). EXO is often responsible for the procurement of small activities under the Simplified Acquisition Threshold (e.g., analyses, assessments, and other short-term support); oversees USAID's staffing needs that support the design and implementation of activities; maintains relevant Mission Orders or Mission Notices to supplement this chapter's policies and procedures; and provides implementing partners with advice and guidance to help them operate effectively in the partner country.
- Resident Legal Officer (RLO). The RLO provides legal counsel and advice on a broad range of matters related to the design and implementation of activities; guides the team in satisfying all relevant legal (including pre-obligation) requirements and documenting such; and guides the process of negotiating and finalizing non-A&A agreements (e.g., agreements with partner governments; PIOs; Inter-Agency agreements under Section 632(b) of the FAA, as amended; etc.).
- Climate Integration Lead (CIL). The CIL provides support and advises Design Teams on how to conduct mandatory climate-risk assessments, where applicable according to section 201.3.4.5 and [ADS 201mal](#); and advises CORs/AORs and other managers on integrating risk-management measures into design, monitoring, evaluation and CLA.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- Mission Environmental Officer (MEO). The MEO provides support and advises Design Teams on how to conduct mandatory environmental reviews under section **201.3.4.5** and [ADS 204](#); submits environmental-compliance documents to the appropriate Bureau Environmental Officer in Washington for review and concurrence; and advises CORs/AORs and other managers on monitoring and/or overseeing approved mitigation measures during implementation.
- Mission Gender Advisor/Point of Contact (Gender Advisor). The Gender Advisor advises Design Teams on how to integrate equality between women and men and female empowerment into the design and implementation of activities according to section **201.3.4.5** and [ADS 205](#). For stand-alone activities, the Gender Advisor conducts, facilitates, and/or reviews the mandatory gender analysis and ensures the integration of findings in meaningful ways into an activity's design. For activities bundled into a project, the Gender Advisor ensures the integration from the findings from a project-level gender analysis (and any supplementary activity-level gender analyses, if applicable) in meaningful ways into the design of an activity. The Gender Advisor also ensures that activity-level performance indicators are, as appropriate, sex-disaggregated and/or gender-sensitive; collaborates with CORs/AORs and other managers during implementation to monitor, evaluate, and learn from activities with regard to their impact on gender integration; and advises on course corrections, as appropriate, that could further close gender gaps.
- Other Cross-Cutting Advisors and POCs in the Mission. Other cross-cutting advisors/POCs in the Mission may include a Mission Engineer, a Mission Economist, a focal point for marginalized populations, and/or others depending on the Mission. Advisors/POCs take an active role in conducting, facilitating, or reviewing analyses to provide insights about technical issues related to their respective areas of responsibility; and provide advice, guidance, and follow-up on respective issues in the design and implementation of activities.
- Washington Operating Units/Regional Missions. Washington OUs and Regional Missions provide guidance to Missions on policies and priorities; support Missions with technical expertise consistent with the [Agency Approach to Field Services \(AAFS\)](#); ensure the implementation of Agency-wide sector strategies and initiatives; and provide field support, as requested, to Missions in support of the functions outlined in this section, including for analyses and the collection of other evidence needed to develop the design of activities.

### **201.3.4.2 Applicability of Guidance on the Design and Implementation of Activities**

Effective Date: 10/28/2020

#### **A. Applicability**

*Text highlighted in yellow indicates that the material is new or substantively revised.*

The guidance in this section (section **201.3.4**) generally applies to all activities, including those bundled into a project, as well as stand-alone activities that are not part of a project.

## **B. Exemptions**

The following types of awards/activities are exempt from the requirements herein. While exempt, OUs must approve these awards/activities through AAMs, customized as appropriate, and ensure that they satisfy relevant pre-obligation requirements. See [ADS 201mai, Activity Approval Memorandum \(AAM\)](#), and [Additional Help: List of Pre-Obligation Requirements for New Activities](#) for further guidance.

- 1) Awards that Provide Management or Support Services: Awards that provide management and support services are exempt because they do not directly generate development results and, therefore, are not an “activity” as defined herein. These services include evaluations, assessments, MEL platforms, institutional support services, and other awards funded with Program Design and Learning (PD&L) funds. While these types of awards are exempt, OUs are encouraged to use aspects of this guidance as appropriate.
- 2) Emergency Food Assistance, Disaster Assistance, and Transition Assistance: Certain activities targeted at preventing, responding to, recovering from, and transitioning from crisis are exempt from the requirements herein. These activities include:
  - Activities managed by the Bureau for Humanitarian Assistance (BHA); and
  - Activities managed by the Bureau for Conflict Prevention and Stabilization’s Office of Transition Initiatives (CPS/OTI).

### **201.3.4.3 Incorporating Self-Reliance into the Design of Projects and/or Activities**

Effective Date: 10/28/2020

Consistent with [USAID’s Policy Framework](#), Missions must integrate the Agency’s high-level objective to support the Journey to Self-Reliance in partner countries in all CDCSs (see section **201.6**). This mandate to integrate the Journey to Self-Reliance also extends to the design and implementation of projects and/or activities when Missions must identify and implement approaches that operationalize their CDCS(s). Washington OUs also must integrate the Journey to Self-Reliance into the design and implementation of their activities, including solicitations and the resultant awards.

#### **a. The Self-Reliance Vision**

*Text highlighted in yellow indicates that the material is new or substantively revised.*

USAID defines “self-reliance” as the product of two mutually reinforcing elements:

- 1) A country’s capacity to plan, finance, and implement solutions to local development challenges; and
- 2) A country’s commitment to see these solutions through effectively, inclusively, and with accountability.

This definition recognizes that the sustainability and long-term success of development assistance requires increasing local ownership, or “commitment,” and strengthening the “capacity” of local actors to lead their own development. It is based on an overarching theory of change that as USAID supports governments, civil society, communities, and the private sector in partner countries in advancing capacity and commitment, these countries will increasingly become more stable, resilient, and prosperous, and thus more self-reliant. This then will advance USAID’s stated mission to “end the need for foreign assistance.”

#### **b. Self-Reliance and the Program Cycle**

The development of a CDCS represents a Mission’s first opportunity to integrate the Journey to Self-Reliance into its strategic vision and programmatic approach. According to **ADS 201.3.2.8**, Missions must assess the self-reliance of their partner countries’ national leaders and institutions during this process by using the Agency’s standardized analytical tool for the Journey to Self-Reliance, the “Country Roadmap” (see [USAID’s Country Roadmaps web portal](#)). Coupled with secondary metrics and other sources of evidence, these Roadmaps should help Missions identify opportunities and challenges across the dimensions of capacity and commitment to help them make strategic choices and identify high-level approaches for accelerating the Journey to Self-Reliance in their respective countries.

A country’s self-reliance story should come into even greater focus during the design and subsequent implementation of projects and/or activities. During these processes, Missions should assess the self-reliance of the local system or institutions that affects a given development result (*e.g.*, the purpose of an identified project or activity). Each “local system” is, by definition, composed of a set of interconnected local actors—*i.e.*, organizations or individuals in the public sector, private sector, or civil society—that jointly produce the current result (or, put differently, the development problem). Similar to the CDCS process, Missions should leverage the Journey to Self-Reliance Country Roadmap, secondary metrics, and other sources of evidence during these design processes to inform their assessments. With this evidence, Missions should identify

*Text highlighted in yellow indicates that the material is new or substantively revised.*

approaches that promote systemic change from within to foster the sustainability of results, and ultimately, advance enduring country-wide self-reliance.

### c. Self-Reliance Principles in the Design of Projects and Activities

To advance the Journey to Self-Reliance during the design and implementation of projects/activities, OUs should apply the following principles:

- Empower local actors to promote systemic change. OUs should proactively engage key actors—both during design processes, as well as during implementation—to ensure that identified programmatic approaches align with locally identified development priorities and promote local ownership and investment as key drivers behind sustainable change. Two approaches of the Journey to Self-Reliance—1) [Private-Sector Engagement \(PSE\)](#) and 2) [Financing Self Reliance \(FSR\)](#)—are particularly critical for developing partnerships with the public and private sectors, which often have large untapped potential to marshal and manage additional resources for lasting impact.
- Reorient partnership models and program practices. Missions should think creatively about how to use strategically the broad range of tools and practices at their disposal to accelerate progress on the Journey to Self-Reliance. These tools include more collaborative and co-creative approaches to design and implementation; they also include working with and through “new and underutilized partners,” and local and “locally-established partners,” that can bring forward new ideas and innovations, and amplify resources that can scale activities (see USAID’s [Acquisition and Assistance Strategy](#) and section 201.6). In addition, these tools include implementation approaches that facilitate, rather than deliver, change, and that leverage USAID’s influence and convening power to increase the measurable impact and reach of USAID’s development assistance.
- Make investments for impact and take balanced risks. OUs should assess programmatic tradeoffs thoughtfully to make hard choices that can maximize the impact per dollar of their limited resources. This means taking an intentional, yet balanced, approach to risk-management that takes advantage of opportunities while reducing or mitigating threats. It also means strategically investing in identified leverage points where advancements in the Journey to Self-Reliance could potentially trigger large-scale systemic change, while recognizing that sometimes these approaches will fail to fulfill their promises (see [USAID’s Risk Appetite Statement](#) for further guidance).

*Text highlighted in yellow indicates that the material is new or substantively revised.*

For additional guidance and resources on approaches for advancing the Journey to Self-Reliance, see the [Journey to Self-Reliance page on ProgramNet](#).

#### **201.3.4.4 Mission Concurrence for Washington/Regional Mission-Funded Activities**

Effective Date: 10/28/2020

Washington OUs and Regional Missions/Platforms (WOU/RMs) that both fund and manage activities implemented in the field must obtain concurrence for such activities from the responsible Mission Director or the senior official who has direct purview over the country, or his or her designee, unless exempted in [ADS 201man](#). WOU/RMs must email concurrence requests by using the [Mission Concurrence Request Form](#) to the responsible Mission at [program.\[country\]@usaid.gov](mailto:program.[country]@usaid.gov).

WOU/RMs must obtain concurrence as early as possible, ideally during the activity-design process. If the country is not identified at the time of design, WOU/RMs must obtain concurrence during the solicitation process or prior to the start of implementation in-country. Both the WOU/RM and the bilateral Mission (or other OU that has purview over the country) must document concurrence.

In addition, as described in [ADS 201man](#), WOU/RMs should align their field-based activities with Mission CDCSs wherever feasible and appropriate.

For additional guidance, see [ADS 201man](#).

#### **201.3.4.5 Phase One: Activity-Design Planning**

Effective Date: 10/28/2020

During Phase One of an activity-design process, OUs 1) identify the need for a design; 2) identify a primary POC/Design Team to lead the design process; and 3) identify or revalidate high-level parameters to guide the design process.

##### **a. Identify the Need for an Activity Design**

OUs should aim to identify potential activity needs as early as possible. For A&A agreements, the Agency's Procurement Action Lead Time (PALT) averages about nine months for competitive acquisition solicitations, and about five months for competitive assistance solicitations. This is in addition to the timeline associated with the "pre-PALT" design process, which covers the period from the initiation of a design to the approval of an activity and submission of the requisition into the Agency's [Global Acquisition and Assistance System \(GLAAS\)](#) (see [ADS 300.5](#) for further guidance on PALT planning).

Missions should plan prospective activities based on priorities identified in the CDCS and supporting projects where applicable (see section **201.3.3** for

*Text highlighted in yellow indicates that the material is new or substantively revised.*

additional guidance on projects). In many cases, Missions also will identify activity-design needs based on new U.S. Government foreign-policy imperatives, Congressional directives, or Agency mandates; changes in foreign-assistance resources; the emergence of new evidence or learning; and/or shifts in the development context. In the case of significant changes, Missions should consider whether updates are needed to their CDCS(s) to reflect these changes (see section **201.3.2.21** on updates to the CDCS).

#### **b. Identify a Primary POC/Design Team to Lead the Design Process**

After identifying an activity need, OUs must identify a primary POC to lead the design process (known as the “Planner” in the case of A&A mechanisms; see [ADS 300.2](#)). For designs that are large, complex, or strategically important, OUs should establish an activity Design Team—ideally, an intra-OU Design Team—to support the primary POC and ensure the consideration of diverse perspectives. For component activities under a project, OUs should ensure members of the project team collaborate as needed to build in synergies between complementary activities.

#### **c. Identify or Revalidate High-Level Parameters to Guide the Design Process**

Finally, OUs must identify high-level scope/process parameters to guide the design process. The purpose of clarifying overall parameters at the outset is not to establish an early design or concept paper; it is to ensure that the Design Team has a clear mandate and understanding of what it needs to do to proceed efficiently with the design of an activity. OUs also must document identified parameters to create a record as a reference and for follow-up purposes. OUs may satisfy this requirement by mandating that teams confirm parameters with the Program Office over email or that they meet with identified senior staff and record decisions in the form of minutes, among other approaches. For activities planned in a PDD, the parameters therein satisfy this requirement.

[Note: In addition to this parameters-setting phase, some OUs could require a concept paper/review during an early juncture in the design process. This is allowed, but not required, and OUs should balance the time and effort associated with extra clearance or review processes with the level of resources, complexity, and strategic importance of the activity.]

At a minimum, OUs must identify (or revalidate, if included in a PDD) the following parameters:

- 1) The preliminary purpose of the activity;
- 2) How the activity will advance CDCSs and/or project-level results, where applicable;

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- 3) The activity's preliminary budget; and
- 4) The preliminary mechanism type (*i.e.*, whether the activity is expected to be an A&A mechanism or non-A&A type mechanism such as a partner government agreement (G2G), a finance instrument issued by the DFC, etc.).

While not required, the Agency highly encourages OUs to consider other parameters for scope and process during this phase, such as:

Overall Plan for Analysis and Stakeholder Engagement. OUs should consider their overall plan for analysis and engagement to ensure that the design is grounded in evidence. In making this determination, OUs should use their professional judgment regarding the type and depth of analysis and engagement needed, depending on the context and nature of the development problem, as well as the applicability of evidence gathered during the CDCS or project-design process, where applicable.

Potential sources of evidence include, but are not limited to, the following:

- Relevant analyses or analytic work conducted or reviewed during the CDCS or project-design processes (*e.g.*, contextual analysis for the Journey to Self-Reliance; see the [Journey to Self-Reliance Roadmap Key Resources](#));
- New analyses conducted or commissioned by the Design Team; *e.g.*, [political-economy analyses](#); [cost-benefit analyses](#); comparative cost-effectiveness analyses, including [cash benchmarking](#), [inclusive-development analysis](#), etc.; (see [Additional Help: Compilation of Analyses and Assessments](#) for a more complete list);
- Evaluations, analyses, monitoring data, and lessons learned from prior projects and activities and conducted by other donors;
- Sector-specific analyses, assessments, studies, or data conducted or disseminated by other organizations or researchers;
- Analyses regarding the cost-effectiveness of the proposed design;
- Focus groups, consultations, or co-creative design processes with local stakeholders and potential beneficiaries, among other options; and
- Geospatial data that combines location data with attributes (*e.g.*, attributes in the context, or from the implementation of previous projects or activities, etc.).

*Text highlighted in yellow indicates that the material is new or substantively revised.*

Co-Creative and Collaborative Approaches to Design. To strengthen local engagement and ownership, and/or bring new ideas or approaches to the Agency, OUs may consider pursuing a more co-creative or collaborative approach to design. Depending on the approach, this could imply a multi-phase solicitation process (e.g., use of a Broad Agency Announcement (BAA) or Annual Program Statement (APS), a Request for Concept Papers, the use of oral applications or presentations, etc.). See USAID's [A&A Strategy](#) and [Discussion Note: Co-Creation](#) for additional guidance on the wide range of approaches to advance co-creation.

Plan for Mandatory Analyses. OUs should also consider their plans for conducting or reviewing mandatory analyses, as applicable, that must inform the design of an activity:

- Gender: According to Public Law [P.L. 115-428](#) and [ADS 205](#), OUs must ensure that gender analysis shapes strategies, projects, and activities as applicable. To implement this mandate, Missions must conduct, commission, or review a gender analysis and incorporate findings into the activity design as appropriate. OUs may use third-party gender analyses (e.g., from another donor or multilateral organization), or a project-level analysis where applicable, to satisfy this requirement as long as such analyses yield data at a level useful for directly informing the subject design(s).
- Environment: According to [Part 216 of Title 22 of the Code of Federal Regulations \(CFR\)](#) and [ADS 204](#), OUs must identify, assess, avoid, and mitigate, as appropriate, the potential environmental impacts of all USAID's activities, unless otherwise exempted. As part of this mandate, OUs must complete an environmental review that covers the activity at the earliest point during the design process in which a meaningful review can be conducted so that it can inform the design of the activity as appropriate. Based on this review, OUs must prepare an Initial Environmental Examination (IEE) or a Request for Categorical Exemption for approval by the Mission Director (if in a Mission) or the Office Director (if in Washington), with final concurrence by the responsible Bureau Environmental Officer. For those activities that have the potential for a significant effect on the environment—*i.e.*, those described in [Part 216.2\(d\) of Title 22 of the CFR](#) or that have a positive threshold determination—an Environmental Assessment (EA) might be required in addition to, or in lieu of, an IEE. If there is not sufficient information upon which to complete a meaningful review during the design process, the IEE may defer the threshold determination to a specified pre-award or post-award juncture, but in no event later than when major programmatic implementation begins.
- Climate Risk: According to [Executive Order 13677](#) and [ADS 201mal](#), OUs must assess climate-related risks for all of USAID's investments, unless otherwise exempted in [ADS 201mal](#); and incorporate climate risk-

*Text highlighted in yellow indicates that the material is new or substantively revised.*

management (CRM) measures into the design and implementation of activities, if applicable (e.g., into a Statement of Work; Environmental Mitigation and Monitoring Plan; Activity Monitoring, Evaluation and Learning Plan, etc.). Missions must implement this requirement through a mandatory climate-risk screening during the development of the R/CDCS (see section **201.3.2.11** and [ADS 201mat](#)), and, if applicable, a more-rigorous climate-risk assessment for sectors or areas identified in the R/CDCS as moderate or high risk. Much like the mandatory environmental review (see above), Missions must conduct applicable assessments at the earliest point during the design of a project or activity in which meaningful analysis can be conducted so that it can inform the design as appropriate. Missions and other OUs must document findings from climate-risk assessments, along with associated CRM approaches where applicable, in the relevant environmental compliance document associated with the activity (e.g., an IEE). Where CRM is not applicable because either an activity-level or higher-level assessment identified low risks for the sector/area/activity, the relevant environmental-compliance document must certify this finding. If there is not sufficient information upon which to complete a meaningful assessment during the design process, such document may alternatively approve a deferral, in part or full, to a specified pre-award or post-award juncture, but in no event later than when major programmatic implementation begins.

Monitoring, Evaluation, and CLA. OUs should identify any needs for monitoring, evaluation, and/or CLA they must incorporate into the design and/or award language (e.g., learning or data needed for the PMP, the annual PPR or, if applicable, a PDD). OUs should incorporate monitoring, evaluation, and CLA planning into the design of activities from the beginning to ensure, for example, the collection of indicator baseline data before major implementation begins, to plan an impact evaluation in parallel if the activity includes an innovative approach, or to identify potential points to reflect on progress and adapt as needed.

Special Requirements/Processes. OUs should identify any instrument, sector, or country/region-specific requirements/processes, as applicable, that require special planning, such as the completion of a construction-risk screening if an activity has a construction component (see [ADS 201maw](#)), a “key considerations” assessment if the activity will be implemented in a politically sensitive country (see [ADS 201may](#)), or a two-stage Public Financial Management Risk Assessment Framework (PFMRAF) process if the activity will be a Government-to-Government mechanism valued at or above \$750,000 (with certain exceptions; see [ADS 220](#)). See [Additional Help: List of Pre-Obligation Requirements for New Activities](#) for a general list of requirements, most of which are contingent on the sector or type of instrument, among other scenarios. OUs should also consult with their RLO/GC POCs, their Program Office(s), and/or OAA for further guidance.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

Resource Implications Associated with the Design. OUs should plan/budget for any estimated costs associated with the design process (e.g., the time and cost of commissioning analyses, collecting a baseline, funding temporary-duty travel, etc.).

Timeline and Benchmarks. OUs should consider the timeline and benchmarks for completing the analytic and other steps necessary to complete the design process.

Activities Scheduled for Concurrent Design (if applicable): OUs should consider any activities that they intend to design concurrently, particularly if such activities will jointly contribute to a higher-level result in a project, to minimize lead times and ensure they design activities to complement one another. If OUs exercise this option, they also may approve these activities jointly within a single AAM (see [ADS 201mai, Activity Approval Memorandum \(AAM\)](#)).

Check-Ins During the Design Process. OU management should consider whether to require any check-ins during the design process. Some OUs may require a concept review, or development of an early concept paper, to ensure that the design is on track. As described earlier in this section, OUs should balance the time and effort associated with any extra clearance or review processes with the level of resources, complexity, and strategic importance of the activity.

#### **201.3.4.6 Phase Two: Activity-Design Process for Acquisition and Assistance (A&A) Mechanisms**

Effective Date: 10/28/2020

During Phase Two of an activity-design process, OUs design an activity based on the parameters identified during Phase One and the preliminary mechanism type selected. This section provides guidance on designing A&A mechanisms implemented by contractors or grantees:

- See **Section A** for guidance on designing an activity in which the OU will select the successful contractor/grantee through a competitive, single-phase process of solicitation and evaluation.
- See **Section B** for guidance on other types of A&A mechanisms.

##### **a. A&A Mechanisms Based on a Competitive, Single-Phase Solicitation Process**

The following table reflects a typical process for designing an activity in which the OU will select the successful contractor/grantee through a competitive, single-phase solicitation and evaluation process. The exact process will vary depending on the circumstances. As such, the intermediary results reflected in this table are not necessarily sequential or universal, and teams should adapt these guidelines as appropriate. For further guidance on this process, see [ADS 201mba, Activity Design Process for Acquisition and Assistance Activities](#).

*Text highlighted in yellow indicates that the material is new or substantively revised.*

**b. Other A&A Mechanisms/ Approaches**

A number of other partnering and design approaches that result in A&A mechanisms use different design processes than that described in **Section a** above. These include, but are not limited to, the following:

- Multi-Phase Solicitation Approaches that Support Innovation or Co-Creation:** Multi-phase solicitation approaches—such as multi-phase Requests for Proposals (RFPs) and certain BAAs and APSs—refer to A&A solicitations in which OUs select offerors/applicants based on a multi-step process of solicitation and evaluation (e.g., a first-phase request for concept papers followed by a second-phase invitation to produce a full proposal or application). In these cases, the initial solicitation often broadly focuses on a given development problem to maximize the opportunity for innovation. In addition, Design Teams often collaborate closely with offerors/applicants during the solicitation process to develop or refine promising proposals or applications. As described in the Agency’s [Acquisition and Assistance Strategy](#), USAID highly encourages OUs to use these approaches to support greater innovation and co-creation. These approaches also can help reduce barriers to entry for local, new, and underutilized partners.

Because these solicitations use a multi-phase process, the process outlined in **Section a** is not applicable. However, OUs should use aspects of this guidance as appropriate. OUs also should leverage the Phase One: Activity Design Planning period (see section **201.3.4.5**) to outline a customized design process. In all cases, OUs must approve these activities through AAMs (see [ADS 201mai, Activity Approval Memorandum \(AAM\)](#)). For these mechanisms, the “Activity Description” annexed to the AAM may be the Concept Note/Application that emerges from the co-creation process.

- Unsolicited Proposals/Concept Papers/Applications:** Unsolicited proposals (for acquisition) or unsolicited concept papers/applications (for assistance) refer to written requests for funding for new or innovative ideas submitted at the initiative of an offeror/applicant for purposes of obtaining a contract or assistance award with USAID (see [ADS 302map, Guidelines for Submitting Unsolicited Contract Proposals](#) and [FAR Part 15.6](#) for additional guidance on policy directives and required procedures on unsolicited proposals).

*Text highlighted in yellow indicates that the material is new or substantively revised.*

Because these activities do not use a design process initiated by USAID, the guidance in **Section a** is not applicable. However, OUs must still approve these activities through AAMs, customized as appropriate (see [ADS 201mai, Activity Approval Memorandum \(AAM\)](#)).

- **Field Support Mechanisms:** Field Support mechanisms refer to A&A agreements managed by Washington OUs and that Mission's access by using transfers under the Operating Year Budget (OYB) for a given Fiscal Year. While Washington maintains the managerial lead for these types of agreements, CORs/AORs typically work closely with Activity Managers in a Mission to ensure their successful implementation. For these reasons, Mission-level Field Support is considered to be a field-based "activity" in this guidance, and the decision to access Field Support must advance intended results in the Mission's CDCS and/or PDD, as applicable.

Missions should use their professional judgment—based on the mechanism and circumstances involved—to determine whether, or the degree to which, an analytic design process is appropriate. However, at a minimum, Missions must approve multi-year Field Support activities through AAMs, customized as appropriate (see [ADS 201mai, Activity Approval Memorandum \(AAM\)](#)).

Approval through an AAM: 1) provides Mission management with an opportunity to review and approve the Activity Description (however defined); and 2) documents compliance with applicable pre-obligation requirements described in [ADS 201mai](#), which Missions are often responsible for addressing. (In some cases, Missions may request that Washington-based CORs/AORs provide supporting documentation on pre-obligation requirements). As described in [ADS 201mai](#), Mission Directors may delegate authority to approve AAMs to the extent appropriate (e.g., to an Office Director for Field Support activities under a certain threshold).

There are two exceptions to the requirement to approve Mission-level Field Support through an AAM: 1) According to section **201.3.4.2**, Field-Support transfers for evaluations, assessments, and other management and support services are exempt because they do not directly generate programmatic results and, therefore, are not an "activity" as defined herein; and 2) Field-Support activities with a total investment length of less than one year are exempt because they are otherwise approved through an annual (Country, Malaria) Operational Plan. However, Missions are still responsible for satisfying applicable pre-obligation requirements.

#### **201.3.4.7 Phase Two: Activity-Design Considerations for Non-A&A Mechanisms**

Effective Date: 10/28/2020

*Text highlighted in yellow indicates that the material is new or substantively revised.*

As described in section **201.3.4.6**, during Phase Two of an activity-design process, OUs design an activity based on the parameters identified during Phase One and the preliminary mechanism type selected. This section describes a number of partnering approaches beyond A&A agreements to achieve measurable development results. This section also provides links to additional guidance to inform these design processes.

These mechanisms include the following:

- **Agreements with Partner Governments.** Agreements with partner governments, also known as Government-to-Government (G2G) agreements, refer to direct funding agreements with partner governments. These agreements employ a variety of funding mechanisms, but a basic choice is between so-called “project” and “program assistance.” (Note: The terms “program” and “project” in this context are legacy terms; they do not coincide with other uses of these terms in **ADS 201**).
  - Project Assistance refers to G2G agreements based on a design with the partner government that finances specified results based on cost (with either a Cost-Reimbursement or Fixed-Amount-Reimbursement payment mechanism).
  - Program Assistance, also known as Non-Project Assistance, refers to generalized resource transfers—in the form of cash, commodities, or sovereign bond guarantees—to partner governments based on meeting defined benchmarks (e.g., policy reforms) and not on cost.

OUs must complete a number of requirements before engaging in a design process with a partner government. Completion of all necessary assessments and requirements is the basis for the Approval of Use of Partner Government Systems (AUPGS) signed by a Mission Director that permits a Partner Government Systems team (*i.e.*, the Design Team) to proceed in designing the activity. These requirements include a two-stage PFMRAF process for G2G agreements above \$750,000, if not otherwise exempted or waived, as detailed in [ADS 220](#). They also include other requirements identified in Section 7031 of the annual appropriations act.

For additional guidance on designing these agreements, see [ADS 220, Use of and Strengthening of Reliable Partner Government Systems for Implementation of Direct Assistance](#).

- **Agreements with Public International Organizations (PIOs) and Bilateral Donors.** Agreements with PIOs refer to funding agreements with organizations composed of multiple Member States (e.g., the United Nations), while agreements with bilateral donors refer to funding agreements with other donor governments that provide development assistance.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

These type of agreements help put into practice the Agency's commitment to donor coordination and multilateralism, consistent with, and in furtherance of the spirit of, the [Paris Declaration on Aid Effectiveness](#), the [Accra Agenda for Action](#), the [Busan Partnership for Effective Development Cooperation](#), the [Nairobi Outcome Document](#), and the [Department of State-USAID FY 2018-2022 Joint Strategic Plan](#). However, such agreements also should be the exception, not the rule, for USAID's programming, and must provide a greater benefit to the U.S. Government than any other available transaction.

For additional guidance on PIOs, see [ADS 308](#). For additional guidance on grants to bilateral donors that provide development assistance to a third country, see [ADS 351](#).

- Inter-Agency Agreements (IAAs) under Section 632(b) of the Foreign Assistance Act (FAA), as Amended. Agreements under Section 632(b) of the FAA are a particular type of IAA in which USAID obtains the services or facilities of another U.S. Government Department or Agency to carry out the purposes of the FAA. One basis for engaging another Federal Department or Agency under Section 632(b) of the FAA is to carry out an inherently governmental function, as defined in [Office of Management and Budget \(OMB\) Circular A-76](#).

For additional guidance on designing these agreements, see [ADS 306, Interagency Agreements](#).

- Tools of the U.S. International Development Finance Corporation (DFC). The DFC offers a range of legal instruments that can help mobilize private capital in support of USAID's development objectives. The DFC's tools include loan and loan-portfolio guarantees, direct loans, political-risk insurance, and equity investments.

The [Better Utilization of Investments Leading to Development Act of 2018 \(BUILD Act\)](#) established the DFC. The DFC's suite of tools replaces and expands USAID's previous Development Credit Authority (DCA).

To access the DFC's tools, initiating Missions/OUs should consult with their designated DFC Liaisons and/or the Private-Sector Engagement (PSE) team in the Bureau for Economic Growth, Education, and Environment (E3), soon to be the PSE Hub within the new Bureau of Development, Democracy, and Innovation (DDI). Missions/OUs also may refer to the [DFC-USAID Field Manual](#), as amended, for further details and guidance.

In all cases, OUs must approve activities through AAMs (see [ADS 201mai, Activity Approval Memorandum \(AAM\)](#)), customized as appropriate, and ensure that they satisfy relevant pre-obligation requirements. See [Additional Help: List of Pre-](#)

*Text highlighted in yellow indicates that the material is new or substantively revised.*

**Obligation Requirements for New Activities** for a general list of requirements, many of which are contingent on the sector or type of instrument, among other scenarios.

#### **201.3.4.8 Implementation of Activities**

Effective Date: 10/28/2020

The implementation of an activity typically commences with the signing of an agreement between the Agency and the partner(s) or awardee(s). During implementation, CORs/AORs/Government Agreement Technical Representative (GATRs) (and other managers, depending on the mechanism type) should do the following:

- Oversee their activities in accordance with the terms of the agreement; see section **201.3.4.9** on these and other roles;
- Work with their project team, where applicable, to generate synergies across activities in support of project and CDCS-level results (see section **201.3.2.13** and [ADS 201sam, Section 11](#) on the implementation of CDCS(s) and projects, respectively);
- Monitor, evaluate, and learn from the implementation of activities, reflect on progress, and identify course corrections as needed to advance measurable, activity-level results (see section **201.3.4.10** on monitoring, evaluation, and CLA during implementation);
- Monitor or oversee the implementation of identified approaches/mitigation measures from mandatory analyses (gender, environment, climate-risk);
- Adapt implementation and execute activity modifications, as needed, to yield the most effective course of action (see section **201.3.4.12**); and
- Work with the Contracting/Agreement Officer (CO/AO) and/or other officials (depending on the type of mechanism) to close out the agreement as quickly as possible, while ensuring the capture and sharing of knowledge and learning during activity implementation for its application to future projects or activities (see section **201.3.4.13**).

#### **201.3.4.9 Delegations of Authority and Other Roles in the Implementation of Activities**

Effective Date: 10/28/2020

##### **A. Obligating Officials**

At USAID, certain officials—sometimes referred to as “obligating officials”—have Delegations of Authority (DOA) to sign, negotiate, amend, and administer different types of mechanisms. There are two paths for DOAs: one that flows from the Director of

*Text highlighted in yellow indicates that the material is new or substantively revised.*

M/OAA (as the Senior Procurement Executive, Chief Acquisition Officer, and Assistance Executive) and one that flows from the USAID Administrator:

- 1) The Director of M/OAA delegates authority to COs/AOs to administer acquisition and assistance agreements within the specific limitations of their warrants (see [Part 701.6 of the USAID Acquisition Regulation \(AIDAR\)](#) for information on acquisition and [ADS 303.2\(d\)](#) for assistance).
- 2) In addition, the Agency Administrator delegates authority to AAs to administer agreements with partner governments, 632(b) interagency agreements, and agreements with PIOs and bilateral donors, which in the vast majority of cases, is redelegated to responsible Mission Directors (see [ADS 103.3.5.1\(c\)](#), [ADS 103.3.8.4](#), and [ADS 103.3.8.4](#), respectively). The Agency Administrator also delegates authority to AAs and Mission Directors to administer A&A agreements in an amount not exceeding \$150,000 (or local currency equivalent) in the aggregate (see [ADS 103.3.5.8](#)). These authorities do not impinge on the DOAs granted to COs/AOs.

#### **B. Contracting Officer's/Agreement Officer's Representative (CORs/AORs)/Government Agreement Technical Representative (GATRs)**

As described in **Section A** above, COs/AOs have the authority to sign, negotiate, amend, and administer A&A and certain PIO agreements within the limitations of their warrants. For each activity under management, COs/AOs generally assign certain authorities to a COR/AOR for purposes of ensuring day-to-day technical and administrative oversight of the activity. This DOA occurs through a signed designation letter addressed to a specific individual.

For other types of agreements (e.g., partner agreements, PIO contributions, IAAs, etc.), an AA or Mission Director typically serves as the obligating official with authority to sign, negotiate, amend, and administer the agreement. Like COs/AOs, AAs and Mission Directors also typically delegate certain authorities for day-to-day technical management; however, the nature of the relationship can be quite different, depending on the mechanism. For partner government agreements, such delegation is generally to a GATR through a signed designation letter. However, the Mission's RLO and other staff who represent different functions also often play key roles.

CORs/AORs/GATRs must closely review and follow all responsibilities, core functions, and limitations as stated in their designation letter. Administrative responsibilities typically include ensuring inventory control, assuring the quality of data, and approving implementation plans or work plans, among other functions (see [ADS 302](#), [ADS 303](#), and [ADS 220](#) for additional guidance on acquisition, assistance, and partner-government agreements, respectively).

*Text highlighted in yellow indicates that the material is new or substantively revised.*

In addition, CORs/AORs/GATRs/others must work with their implementing partners and other members of the project team to advance project- and CDCS-level results, where applicable. To the extent feasible and appropriate, CORs/AORs/GATRs/others should facilitate joint work planning, meetings with partners, working groups, and/or other collaborative approaches to avoid duplication of effort, generate synergies, and facilitate an environment that is open to learning and adapting (see [ADS 201sam, Section 11](#) on the implementation of projects).

For additional guidance and support, see [COR/AOR Central](#), a platform on ProgramNet dedicated to CORs/AORs.

### **C. Activity Managers**

In addition to these roles with specific delegated authorities, CORs/AORs also may identify an Activity Manager to assist with post-award administrative oversight and monitoring. The principal roles and responsibilities of the Activity Manager include the following:

- 1) Providing support to the COR/AOR in administering the award; and/or
- 2) Providing support to the COR/AOR in performing monitoring functions; e.g., collaborating with the COR/AOR to conduct site visits, verify monitoring data, conduct periodic data-quality assessments, and/or file monitoring and the uploading of required documentation in the [Agency Secure Image and Storage Tracking \(ASIST\) System](#), the Agency's official electronic repository for all A&A award documentation, all in accordance with Agency policy and an award's terms and conditions.

The COR/AOR remains accountable for delegated responsibilities and is the only person authorized to provide technical direction to the contractor or recipient as described in the COR/AOR designation letter. Activity Managers may support the COR/AOR in providing technical and/or administrative oversight of the activity.

Activity Managers may be located in Washington or in the field. In the case of Field-Support activities, the COR/AOR is typically located in Washington, while the Activity Manager is in the field.

If the identified Activity Manager is not a U.S. Direct-Hire (USDH) employee or a USAID Personal Services Contractor, the COR/AOR must consult with the CO/AO and the RLO and/or GC to ensure, among other things, that no conflicts of interest exist and that the individual would not impermissibly carry out inherently governmental functions.

#### **201.3.4.10 Monitoring, Evaluation, and CLA During the Design and Implementation of Activities**

Effective Date: 10/28/2020

*Text highlighted in yellow indicates that the material is new or substantively revised.*

Achieving results outlined in a CDCS through the implementation of a set of activities is a continuous process. It is important to integrate and clarify monitoring, evaluation, and CLA expectations, requirements, and necessary resources at the solicitation phase of an activity to ensure that implementing partners place the appropriate emphasis on these efforts.

Monitoring, evaluation, and CLA for activities should emphasize the systematic process of collecting and analyzing performance data and other information to track progress toward planned results. Monitoring and evaluation should influence the planning of activities, decision-making and the allocation of resources, and to make changes as needed. It also involves collaborating with and across implementing partners to manage the relationship among activities, or between activities and a project, to achieve higher-level outcomes.

Activity monitoring, evaluation, and CLA focuses on whether an activity is achieving programmatic results and generating learning to inform the adaptation of activities based on evidence. These tasks are distinct from award oversight, with some overlapping functions, such as conducting site visits (see [ADS 302](#) and [ADS 303](#) for USAID's policy on A&A oversight management). Missions should make every effort to integrate relevant PMP indicators and Standard Foreign Assistance Indicators into solicitations and awards. Review of activity-approval documentation by a Program Office can help ensure that solicitations reflect the relevant indicators.

#### **a. Activity-Level Plans for Monitoring, Evaluation, and Learning (MEL)**

Activities must have an approved Activity MEL Plan in place before major implementation actions begin. A Mission Director or, in the case of Washington OUs, the head of a Bureau/Independent Office (IO), may approve rare exceptions to this requirement. Any exception must be documented in a memorandum and shared with PPL/LER and, for Missions, the relevant Regional Bureau Program Office.

An OU's Program Office, Activity Planners, and COR/AOR/GATR should work with COs to ensure that the Activity MEL Plan is a requirement in an award or agreement, and is consistent with and meets the needs of a Mission's PMP for monitoring, evaluation, CLA, and collecting or managing data; external reporting requirements, such as the Mission's annual Performance Plan and Report (PPR); the PDD if applicable; and the program-monitoring needs for the management and oversight of activities by USAID. Implementing partners must submit a proposed Activity MEL Plan to the COR/AOR within 90 days of an award, and the COR/AOR must upload the Plan into ASIST immediately upon approval.

In addition to any individual exceptions approved by a Mission Director or head of a Bureau/IO for individual activities, certain types of activities do not require an

*Text highlighted in yellow indicates that the material is new or substantively revised.*

Activity MEL Plan. These include project and general contributions to PIOs or bilateral donors; DFC transaction agreements; program-assistance type G2G agreements; and activities exempted from activity-design requirements, as outlined in section **201.3.4.2** (*i.e.*, emergency food assistance, disaster assistance, and transition-assistance activities and awards for management and support services, including those related to monitoring, evaluation, or CLA). These types of activities may opt to do a MEL Plan, and should monitor the results of activities whether an Activity MEL Plan is required or not.

For activities implemented through A&A awards, CORs/AORs must ensure implementing partners submit a proposed Activity MEL Plan to the COR/AOR within 90 days of an award as specified in the award. In the case of project-assistance type G2G agreements and cost-type agreements with bilateral donors and PIOs, the Mission and the partner government/PIO should agree jointly to the monitoring approach, including performance indicators, as part of the agreement.

Although an implementing partner typically proposes the Activity MEL Plan, it is the COR's/AOR's responsibility to provide input on any required elements, review the plan, collaborate on any necessary changes, and approve or concur with the plan.

The COR/AOR must upload the approved Activity MEL Plan (and any subsequent updates) into [ASIST](#), the Agency's official electronic repository for all A&A award documentation, immediately after approval.

Activity MEL Plans must include the following:

- The activity's monitoring approach, including monitoring processes, systems, and relevant performance indicators of the activity's outputs and outcomes, their baseline values (or plan for collecting baseline), and annual targets; and
- As appropriate, the activity's approach for establishing effective procedures for collecting and responding to feedback from beneficiaries and reporting to USAID a summary of beneficiary feedback and how the implementing partner and the Mission addressed it.

Activity MEL Plans should address the following:

- Expectations for collaboration with any external evaluations of the activity planned by the Mission or Washington OU;
- Any proposed internal or external evaluations;

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- Plans for monitoring context and emerging risks that could affect the achievement of the activity's results;
- Learning activities, including plans for capturing knowledge at the close-out of activities;
- Estimated resources for the MEL activities that are a part of the implementing partner's budget; and
- Roles and responsibilities for all proposed MEL actions.

The Mission and the implementing partner should revise the Activity MEL Plan as needed in response to changes in the activity or context that occur during the life of the activity (see [How-To Note: Activity Monitoring, Evaluation, and Learning Plan](#) for additional guidance).

## **b. Management of Activity-Level Monitoring, Evaluation, and CLA**

### **I. Monitoring**

OUs must monitor implementation progress; including the quantity, quality, and timeliness of an activity's outputs; the achievement of an activity's outcomes; and ensure the quality and delivery of performance-monitoring data collected by partners.

Monitoring is not limited to an activity's interventions; it also involves tracking programmatic assumptions and the operational context of the activity, including risks and opportunities, to recognize trends and shifts in external factors that might affect the activity's performance.

For each activity, OUs must do the following:

- Collaborate with the implementing partner to ensure it collects all necessary monitoring information consistent with the Activity MEL Plan to support the management and learning needs of the activity (and its associated project if applicable); this includes setting performance-indicator targets and collecting performance-indicator baseline data before beginning the implementation of major work;
- Collaborate with the implementing partner to revise the Activity MEL Plan's indicators and targets as needed; see section **201.3.5.6** for additional guidance about changing indicators;

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- Ensure Performance-Indicator Reference Sheets (PIRS) are complete and sufficient, and are consistent across all activities that are collecting data for the same indicator; see section **201.3.5.6** for additional guidance about PIRS;
- Review performance-monitoring indicator data and technical reports to ensure the quality of the monitoring information is sufficient for decision-making and reporting, and conduct data-quality assessments (DQAs) as required; (see section **201.3.5.7** for additional guidance about data quality and DQAs):
  - Missions can conduct DQAs remotely in non-permissive environments;
- Perform site visits to provide oversight over agreements/awards, inspect implementation progress and deliverables, verify monitoring data, and learn from implementation:
  - While each Mission and the activity's context should inform the number and frequency of site visits, in general, Missions should conduct site visits for each activity at least once every six months;
  - For poor-performing activities, such as agreements or awards with audit or evaluation findings that point to moderate or high risk for waste, fraud, or abuse, site visits should occur more frequently;
  - In non-permissive environments, Missions may use remote methods to conduct site visits;
- Within 30 days of a site visit, upload a brief report to highlight the findings from the site visit to the official award file in [ASIST](#); see [How-To Note: Planning and Conducting Site Visits](#) for additional guidance;
- Meet, as needed, with activity stakeholders (e.g., partners, sector experts, donors, beneficiaries, and the partner government) to inform decisions on what to monitor, share and analyze monitoring information, and review progress;
- Analyze and use performance, risk, and context monitoring information to learn, inform management and other decisions, and adapt interventions; and

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- Analyze performance-monitoring indicator data to identify any gender gaps (the extent to which females and males participate in, and benefit from, activities) and determine whether to adapt interventions to address those gaps (see [ADS 205 on Integrating Gender Equality and Female Empowerment in USAID's Program Cycle](#) for more information).

For additional guidance about performance and context monitoring, see section **201.3.5.4**.

## II. Evaluation

Sections **201.3.6.7** and **201.3.6.8** describes the procedures for planning and implementing an evaluation. OUs should plan evaluations of agreements or awards during the process of designing projects and/or activities. When USAID needs information on whether an intervention is achieving a specific outcome, the Agency prefers impact evaluations over performance evaluations. OUs must plan impact evaluations of specific interventions during the activity-design process to accommodate parallel implementation of the evaluation. If an OU plans an impact evaluation, activity planners must work with AOs/COs to include language about the evaluation in the solicitation for the activity undergoing an impact evaluation. However, OUs may decide to initiate a performance evaluation at any point during implementation, particularly if new information arises to indicate that an evaluation is appropriate for accountability or learning purposes.

AORs/CORs/GATRs should engage actively with the implementing partners of agreements or awards being evaluated to ensure they and external evaluators are collaborating productively. AORs/CORs/GATRs should inform implementing partners as early as possible if their activities will be evaluated and must share the draft and final designs of the evaluation design by the evaluation team with the implementing partner for feedback.

AORs/CORs/GATRs should also ensure implementing partners are facilitating full, transparent, and timely access to data, documentation, personnel, and key stakeholders as appropriate for the completion of an evaluation. Following the completion of an evaluation, OUs must share the draft and final evaluation reports with the implementing partner being evaluated and should coordinate with the implementing partner on dissemination and utilization of evaluation findings (see section **201.3.6.10**). OUs must also ensure that the implementing partner delivers evaluation data and information to USAID as specified in the award, and in accordance with Agency standards for the management and submission of data (see [ADS 579, USAID Development Data](#), for additional guidance).

*Text highlighted in yellow indicates that the material is new or substantively revised.*

### III. Collaborating, Learning and Adapting (CLA)

OUs should facilitate an intentional approach to CLA, both within the boundaries of the activity as well as within the project to which the activity contributes, if applicable. Potential approaches include, but are not limited to, the following:

- Having partners identify opportunities to test and explore the activity's theory of change, and/or identify gaps in their technical knowledge bases:
  - OUs should support partners in identifying and implementing ways to fill these gaps, including through monitoring, evaluation, and other sources of learning;
- Planning for, and engaging in, regular opportunities for partners to reflect on progress, such as partner meetings, portfolio reviews, and after-action reviews:
  - These opportunities can focus on challenges and successes in implementation to date, changes in the operating environment or context that could affect programming, opportunities to collaborate or influence other actors better, emerging risks that threaten the achievement of objectives, and/or other relevant topics;
- Encouraging partners to collaborate, where relevant (or requiring it by including language in awards):
  - Collaboration approaches can include joint work planning, regular partner meetings that facilitate knowledge and/or data-sharing, and/or working groups organized along geographic or technical lines; and
  - These activities require time and resources, and the OU should ensure implementing partners have the appropriate resources available to participate;
- Involving implementing partners in the OU's learning activities, such as portfolio reviews or stocktaking efforts, as appropriate; and
- Using the knowledge and learning gained from implementation; opportunities to reflect on performance; monitoring data; evaluations;

*Text highlighted in yellow indicates that the material is new or substantively revised.*

knowledge about the context, risks, and opportunities; and other sources to adjust interventions and approaches as needed.

For more information, see [Incorporating CLA into the Procurement Process](#), [Incorporating CLA into Solicitations](#), and [Incorporating CLA in Activity Management](#).

#### **201.3.4.11 Resource-Management During the Implementation of Activities**

Effective Date: 10/28/2020

Resource-management plays a key role in managing the performance of activities in support of activity-, project-, and CDCS-level results (as applicable). For this reason, resource-management spans organizational boundaries and is not the responsibility of any one office or function.

The Program Office typically plays a lead role in formulating budget requests, planning obligations, and processing allowances prior to obligation of funds. The Office of Financial Management (OFM) in each Mission, in collaboration with the Office of the Chief Financial Officer (CFO) in the Bureau for Management (M), typically plays a lead role in managing obligations and expenditures after obligation.

CORs/AORs/GATRs—in collaboration with the Program Office, OFM, and others—are typically responsible for managing the financial aspects of individual activities. The nature of this collaboration will vary depending on a Mission/OU's staffing levels and organizational footprints. Roles and responsibilities typically include, but are not limited to, the following:

##### **a. Financial Analysis and Management**

CORs/AORs—in collaboration with the Program Office and OFM—must identify, project, and analyze trends and relationships of key financial data throughout the life of an activity. CORs/AORs and others should use this data to manage activity-level performance and ensure the strategic allocation of resources in view of such performance.

Key financial terms include, but are not limited to, the following:

- **Accrual**—The estimated cost of goods and/or services or other performance received, but not yet paid for, by the Agency.
- **Burn Rate**—The rate at which the implementing partner is making expenditures under an agreement, usually quoted in terms of average expenditure per month during a given period of time.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- Commitment (or Sub-Commitment)—An administrative reservation of funds in anticipation of their obligation.
- Disbursements—The actual payments made by the Agency for goods and services or other performance under an agreement.
- Expenditures—Estimates of the total costs incurred by the Agency for goods and services and other performance received under an activity, whether paid for or not, which equals accruals plus disbursements:
  - Expenditures offer a valuable indicator of progress in monetary terms of an activity or project.
- Forward Funding—Obligations, typically from funds in the final year of the period of availability, to cover the cost of goods and services the Agency will receive in a subsequent Fiscal Year.
- Mortgage—The difference between the total authorized level of funding (Total Estimated Amount/Total Estimated Cost) and the cumulative total amount of funds obligated to a particular activity.
- Obligation (or Sub-Obligation)—A term of appropriations law that means some action that creates a definite commitment, or that creates a legal liability of the U.S. Government for the payment of funds for specific goods or services ordered or received.
- Pipeline (or Unliquidated Obligations)—The difference between the total amount obligated in an award or agreement and the total expenditures against that award or agreement.
- Total Estimated Cost/Amount (or Ceiling)—The total authorized level of funding under an award/agreement.

## **b. Administrative Approval of Payments**

CORs/AORs/GATRs must perform the administrative approval of voucher payments submitted under USAID-funded agreements. For acquisition and assistance awards, CORs/AORs must provide administrative approval that the payment request conforms to the award or work plan (and where applicable, technical direction thereunder); for contracts, that the contractor has rendered, and the Agency has received, the goods or services as described in the request; and that payment is in order. CORs/AORs/GATRs should submit the Administrative Approval form with or without approval to the OFM payment office within five business days after receipt.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

For additional guidance, see [ADS 630, Payables Management](#).

### c. Quarterly Accruals

CORs/AORs/GATRs—in collaboration with OFM—must estimate accrued expenditures each quarter and record data in [Phoenix](#). Taken together, these data assist the Agency in managing its overall financial resources.

For additional guidance, see [ADS 631, Accrued Expenditures](#).

### d. Quarterly Reviews

In Missions, CORs/AORs/GATRs must contribute to periodic Mission-wide financial reviews managed by OFM. Missions typically conduct these reviews quarterly to align with the Agency's financial reporting cycle. Financial reviews are an important tool for Missions to review implementation progress in financial terms. This includes reviewing the status of the budget, obligations, expenditures, and pipeline, as well as identifying de-obligations/ re-obligations and proposed reallocations to the budget. Financial reviews should also help inform formulation of budget requests managed by the Program Office, including the Mission Resource Request/Bureau Resource Request, the Congressional Budget Justification, and the Operational Plan for the OU. (See the webpage of the [State Department's Bureau for Foreign Assistance's \(State/F\)](#) on USAID pages for annual guidance).

### e. Incremental and Forward Funding

CORs/AORs/GATRs—in close collaboration with the Program Office and OFM—must request and manage incremental funding over the life of the activity. Incremental funding refers to an obligation (or sub-obligation) of appropriated Fiscal Year funds into an activity-level agreement to support future expected payments over a specified period. Requests for incremental funding should be based on a number of factors, including:

- [Projected Expenditures and Existing Pipelines](#). CORs/AORs/GATRs should base requests for incremental funding on projected expenditures and existing pipelines to ensure that an adequate level of resources is available to support implementation over a specified period. If pipelines are not adequate to finance projected expenditures during the Fiscal Year, there is a risk that new funds will not be available at that time to avoid slowing down or ceasing activity implementation.
- [Activity-Performance and Resource-Allocation Considerations](#). CORs/AORs/GATRs—in close collaboration with Project Managers,

*Text highlighted in yellow indicates that the material is new or substantively revised.*

where applicable, and the Program Office—should consider overall resource allocations in view of an activity’s performance, competing funding priorities, and the activity’s contribution to project-level and CDCS-level results, where applicable.

- **Forward-Funding Policy.** Finally, CORs/AORs/GATRs should ensure that requests for incremental funding comply with the policy on forward funding in [ADS 602](#). In general, this policy states that OUs may not forward fund obligations for more than 12 months beyond the end of the Fiscal Year in which the obligation takes place. Because most obligations occur in the last half of the Fiscal Year, the upper limit of pipelines normally is not expected to exceed 18 months of anticipated expenditures for ongoing activities. The upper limit is obtained by adding 12 months to the number of months remaining in the Fiscal Year after the obligation is made. Exceptions to this policy directive require the approval of the responsible Mission Director or Washington OU AA. (See [ADS 602.3.3](#) and [ADS 602.3.5](#).)

For additional guidance, see [ADS 602, Forward Funding, Program Funds](#).

#### **201.3.4.12 Modifications to Activities**

Effective Date: 10/28/2020

As described in earlier sections, OUs should make course corrections as they learn lessons and circumstances change to advance an activity’s results most effectively. Sometimes these course corrections may require amendments or modifications (hereinafter referred to as “modifications”) to the underlying agreement. Agreement modifications may include adjustments in the scope, budget, ceiling, or key personnel outlined in the agreement, among other examples. OUs must ensure that modifications are made in accordance with the regulatory and policy requirements applicable to the agreement type.

OUs are not required to modify AAMs to execute modifications of activity agreements. Per section **201.3.4.9**, final authority to approve, negotiate, and/or sign modifications of activity agreements rests with the Contracting/Agreement Officer (CO/AO) or other obligating official with delegated authority. For most acquisition and assistance mechanisms, OUs must submit these actions through GLAAS for approval and execution.

While not required, OUs may determine that certain types of activity-level changes—such as a proposed modification to change an activity’s scope or deliverables significantly—should be cleared through the Program Office, the Project Manager, and/or other parties in the OU with equities before submitting them to the CO/AO/GATR/other with delegated authority. OUs may require that these changes be cleared through a modification to the AAM or another process that is more efficient.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

**201.3.4.13 Close-Out of Activities**

Effective Date: 10/28/2020

When an activity concludes, OUs must execute formal close-out procedures. Close-out procedures allow the Agency to “close the file” officially on an activity or agreement programmatically and financially.

For A&A awards, COs/AOs are responsible for closing out agreements as soon as possible and should provide guidance to CORs/AORs/GATRs on their roles in this process. Although COs/AOs lead this process, CORs/AORs/GATRs play an important role in coordinating with OFM to de-obligate funds, or with M/CFO in the case of activities funded and managed by Washington. For further guidance, see [ADS 302sat, Guidance on Closeout Procedures for A&A Awards](#) and the relevant COR/AOR designation letter.

As part of the close-out process, OUs should also consider how to capture and share the knowledge and learning gained during the implementation of an activity, including how to apply lessons learned to future projects or activities. OUs may document this information in a written final report, an evaluation, a conference/event, a video, or online materials, among other options. If produced by the implementing partner, OUs must ensure that the partner has planned and budgeted for these learning materials in advance, in accordance with the terms of their agreement.

**201.3.5 Monitoring**

Effective Date: 10/28/2020

Monitoring is the ongoing and systematic tracking of data or information relevant to USAID’s strategies, projects, and activities. OUs must consider their needs for data and information during planning and design, and at any point in the Program Cycle. Relevant data can include output, outcome, and impact measures directly attributable to, or affected by, USAID’s interventions, secondary data from other institutions, or national information-management systems, as well as measures of the operating context and programmatic assumptions and risks, including those related to the Journey to Self-Reliance in a country or region.

Monitoring informs the design and implementation of strategies, projects, and activities. The analysis of monitoring data should inform efforts to manage adaptively and promote accountability. OUs and implementing partners should use monitoring data in evaluations, and to address learning questions and gaps in knowledge, whenever appropriate.

Additional guidance and tools that provide greater clarity about monitoring throughout the Program Cycle are available in the [USAID Monitoring Toolkit](#).

*Text highlighted in yellow indicates that the material is new or substantively revised.*

**201.3.5.1 Applicability of Guidance for Monitoring**

Effective Date: 10/28/2020

The guidance in section **201.3.5** on monitoring is generally applicable to all OUs. However:

- a. Monitoring requirements based on CDCS or RDCS processes are applicable only to Missions with a CDCS or RDCS.
- b. Monitoring guidance based on processes to design and implement projects are only applicable to projects.
- c. Except when otherwise indicated, Mission Directors or heads of Washington Bureaus/IOs can approve rare exceptions to monitoring requirements for their OU. Any exceptions must be documented in a memorandum to outline the reason for the exception and show evidence of the approval of the Mission Director or, in the case of Washington OUs, head of Bureau/IO. All OUs must share copies of such memoranda with PPL/LER; Missions must share them with the M&E POC of the relevant Regional Bureau. AORs/CORs/GATRs must upload copies of these memoranda into [ASIST](#).
- d. Emergency Food Assistance, Disaster Assistance, and Transition Assistance: Activities targeted at preventing, mitigating, responding to, recovering from, and transitioning from crisis are exempt from some requirements related to monitoring, planning, and timing, such as those related to PMPs or MEL plans. Within their monitoring efforts, these activities should adhere to the quality standards for monitoring as feasible. These activities include the following:
  - Disaster and Emergency Food Assistance managed by BHA; and
  - Activities managed by OTI within CPS, or activities funded with the Complex Crises Fund (CCF) managed by Missions.

**201.3.5.2 Principles of Monitoring**

Effective Date: 10/28/2020

Plan Early: OUs **must** plan for monitoring while developing strategies and designing projects and activities. Missions must document plans for monitoring in the Mission PMP and work with partners to include them in Activity MEL Plans uploaded into [ASIST](#).

Collaborate: Monitoring is better when it involves beneficiaries, partner-country partners, implementing partners, other USAID and U.S. Government entities, and other development actors. Wherever possible, Missions should involve local partners, partner-country, and donor counterparts in their monitoring efforts to align monitoring priorities, ensure access to relevant information systems and data sources through

*Text highlighted in yellow indicates that the material is new or substantively revised.*

data-sharing agreements, strengthen local capacity and self-reliance, and promote continuous learning and aid-effectiveness.

**Adequately Resource:** OUs must include adequate funding and personnel resources for monitoring work and in their budgets for Strategies, projects, and activities, including, as appropriate, funds for managing and gaining access to data and improving capacity among local partners. Missions should plan for approximately three to up to ten percent of Program funds for monitoring work, on average, not including additional funds set aside for Evaluation and CLA.

**Be Practical and Efficient:** OUs should only collect and report on the information that is directly useful for management decision-making or reporting purposes. Wherever possible, OUs should avoid collecting data that are already available through other verifiable sources. OUs should prioritize collecting information and data that are relevant and useful to local partners and stakeholders.

**Be Transparent:** OUs should share information widely and report candidly.

**Be Responsible and Ethical:** Collecting and using information and data responsibly includes protecting participants and human subjects from harm, obtaining informed consent to collect and use data, safeguarding individual privacy and security, protecting the sensitive information of vulnerable and marginalized populations, and applying high ethical standards to deciding what information to collect and how to use it.

### **201.3.5.3 The Roles of Missions and Washington Operating Units in Monitoring**

Effective Date: 10/28/2020

Each Mission and Washington OU Program Office must identify a POC that will lead processes and good practice in monitoring and evaluation; ensure compliance with ADS policies on monitoring and evaluation across the breadth of the Mission's and Washington OU's projects and activities; and interact with the POCs in Regional and Technical Bureaus, and with PPL/LER.

#### **a. Mission Program Office**

At Missions, the Program Office will support Mission Technical Offices to monitor throughout the Program Cycle, ensure compliance with monitoring requirements, promote best practices for utilizing monitoring information during implementation, and support consistency across monitoring plans. The Program Office will maintain the Mission PMP and PIRS (see section 201.3.2.15 and section 201.3.5.6 for additional guidance about a Mission PMP and PIRS). The Program Office is responsible for leading the annual PPR process.

#### **b. Mission Technical Offices**

*Text highlighted in yellow indicates that the material is new or substantively revised.*

Mission Technical Offices are responsible for monitoring throughout the Program Cycle, including by working with the Program Office and partners to develop, review, and approve monitoring plans, develop or select indicators, conduct appraisals of relevant secondary data sources to determine the appropriateness for monitoring needs, ensure the collection and maintenance of data, conduct DQAs, ensure data are of sufficient quality, analyze data for decision-making and adaptation, and share and report data as appropriate.

### c. Washington OUs

Washington OUs support Missions in fulfilling monitoring requirements by providing technical support in selecting appropriate indicators, assisting in the development of Mission-wide PMPs and Activity MEL Plans, supporting data quality, and reviewing annual PPR data.

Washington OUs must follow monitoring guidance described in sections **201.3.5.1** through **201.3.5.7** for any of their own projects or activities implemented. Regarding field support mechanisms, Washington OUs must coordinate with the Activity Manager at the Mission and ensure that both the Mission and Washington OU have the most up-to-date information from monitoring efforts of the field support activity.

For detailed information about staff roles and responsibilities for monitoring, see [ADS 201sal, Staff Roles and Responsibilities for Monitoring, Evaluation, and Learning](#).

### **201.3.5.4** **Types of Program Monitoring** Effective Date: 10/28/2020

#### A. Performance-Monitoring

OUs must monitor the performance of their strategies, projects, and activities. Performance-monitoring is the ongoing and systematic collection of performance indicator data and other quantitative or qualitative information to oversee implementation and understand progress toward measurable results.

Performance-monitoring includes monitoring the quantity, quality, and timeliness of activity outputs within the control of USAID or its implementers, as well as the monitoring of activities, projects, and strategic outcomes expected to result from the combination of these outputs and other factors. Performance-monitoring continues throughout strategies, projects, and activities.

OUs should analyze performance-monitoring data to inform judgments about the outputs and outcomes of programs as a basis to improve effectiveness and/or inform decisions about current and future programming. One way that OUs analyze performance is by comparing actual results achieved against the expected results and targets initially set at the beginning of a strategy, project, or

*Text highlighted in yellow indicates that the material is new or substantively revised.*

activity. This analysis is critical in determining the progress made in achieving the expected results identified in a CDCS Results Framework and project and activity logic models. Missions should use this analysis and knowledge gained to confirm or refute their assumptions and hypotheses and/or adaptively manage, as necessary.

## **B. Context Monitoring**

OUs should also conduct context monitoring for strategies, projects, and activities.

Context monitoring is the systematic collection of information about conditions and external factors relevant to the implementation and performance of a Mission or Washington OU's strategy, projects, and activities. This includes information about local conditions that may directly affect implementation and performance (such as non-USAID projects operating within the same sector as USAID projects) or external factors that may indirectly affect implementation and performance (such as macro-economic, social, or political conditions). Context monitoring should be used to monitor assumptions and risks identified in a CDCS Results Framework or project or activity logic model.

Context monitoring data **can be** analyzed to form judgements about how actors and conditions outside the control of USAID may affect programming. Context monitoring may also reveal the unintended consequences of USAID programming. OUs **should** use this information to make management decisions and inform management actions about implementation, including when and how USAID needs to engage with other donors **and partners** working in the same context.

### **201.3.5.5 Ensuring Monitoring and Reporting are Designed for Use**

Effective Date: 10/28/2020

When planning for monitoring, OUs must consider the utility of the information for management at the relevant level of decision making. **OUs should identify a use and user for all monitoring data prior to collection.** OUs must also ensure that the information collected will be of sufficient quality to be useful for intended users; see section **201.3.5.8), obtain proper data-sharing permissions, and manage data appropriately to safeguard privacy and security.**

### **201.3.5.6 Monitoring Indicators**

Effective Date: 10/28/2020

An indicator is a quantifiable measure of a characteristic or condition of people, institutions, systems, or processes that may change over time. OUs should consider what indicators are useful to understand the performance and evolving context of their

*Text highlighted in yellow indicates that the material is new or substantively revised.*

strategy, projects, and activities. While indicators are not the only means of monitoring strategies, projects, and activities, they are an important part of such monitoring efforts.

## A. Types of Indicators

- 1) Performance Indicators: These indicators measure expected outputs and outcomes of strategies, projects, or activities based on a Mission's Results Framework or project or activity logic model. Performance indicators help answer the extent to which a Mission or Washington OU is progressing toward its objective(s), but alone cannot tell a Mission or Washington OU why such progress is or is not being made.

Certain performance indicators are required within the Program Cycle to measure the performance of expected results that are key to a Mission or Washington OU's portfolio:

- a. PMPs must include at least one performance indicator for each IR identified in the CDCS RF;
- b. PMPs must include at least one performance indicator for any Project Purpose, if identified in an approved PDD; and
- c. Activity MEL Plans must include at least one relevant performance indicator for each activity-level outcome.

Missions should include other performance indicators in the PMP and/or Activity MEL Plan as needed to support the management of Strategies, projects, and activities and learning needs and to meet reporting requirements.

- 2) Standard Foreign Assistance Indicators: Standard Foreign Assistance Indicators are a type of performance indicator defined by Washington Bureaus to collect data from multiple OUs by using common methods and definitions. Standard indicator data allow Washington Bureaus to aggregate and compare results across OUs. All OUs must work with partners to collect and report data on applicable Standard Foreign Assistance Indicators as part of the annual Performance Plan and Report (PPR) if an OU's programming is expected to produce results measured by the indicator (see the annual [Guidance for Performance Plan and Report](#)).
- 3) Context Indicators: These indicators measure factors outside the control of USAID that have the potential to affect the achievement of expected results. USAID recommends context indicators, which a Mission may track at any level of an RF or logic model. Missions may use context indicators to track

*Text highlighted in yellow indicates that the material is new or substantively revised.*

country/regional context; programmatic assumptions and risks of Strategies, projects, and activities; and operational context. For example, key risk indicators identified during the CDCS planning process to monitor external factors and uncertainties that could affect programs are a type of context indicator.

## B. Selecting Indicators

Selecting indicators requires balancing several factors, including the following:

- The quantity and quality of indicator information and data needed for management decision-making and reporting on strategies, projects, and activities;
- The availability of high-quality, verifiable primary or secondary data or information; and
- The management and financial resources required to collect and analyze indicator information and data.

The Mission's PMP and MEL plans should include as many or as few performance indicators as necessary to ensure that progress toward expected results is sufficiently tracked, while also being cost effective by eliminating redundant indicators. OUs must also select indicators as required to report results in the annual PPR or other required reporting documents or processes. OUs should design and select indicators that can meet data quality standards (see **ADS 201.3.5.7 A**).

## C. Changing Indicators

During implementation, OUs may need to change, drop, or add indicators. Indicators may need to be adjusted, for example, to match changes in the scope or direction of Strategies, projects, and activities; to address problems with the cost or practicality of data collection, or to take advantage of new monitoring opportunities that become available during implementation. However, OUs should be cautious about changing performance indicators because it compromises the comparability of performance data over time.

OUs have the authority to approve changes to their PMPs and MEL plans and are responsible for documenting these changes when updating these plans. At the level of an award, the AOR/COR/GATR approves changes to the Activity MEL Plan in collaboration with the partner. For changes to performance indicators, OUs must note the reason(s) for the change, along with final values for all old performance indicators and baseline values for any new performance indicators.

## D. Performance-Indicator Reference Sheet

*Text highlighted in yellow indicates that the material is new or substantively revised.*

OUs must collect and maintain indicator reference information and document that information in a [Performance-Indicator-Reference Sheet](#) to promote the quality and consistency of data across the Agency. A Performance-Indicator Reference Sheet documents the definition, purpose, and methodology of the indicator to ensure all parties that are collecting and using the indicator have the same understanding of its content.

A PIRS is required for all performance indicators included in a PMP, Activity MEL Plan, or reported externally (such as in the annual PPR). The PIRS must be complete and sufficient within three months of the start of the collection of indicator data. When possible, a PIRS should be complete prior to data-collection to ensure the clear definition of indicators and its data-collection methodology. This is critical to promote the quality of data.

A PIRS indicator definition must be consistent across all activities that collect data for the same indicator within an OU. Other information in the PIRS should be consistent across all activities, particularly when the need to aggregate multiple instances of an indicator outweighs the benefits of allowing activity discretion. If there are differences across activities that are collecting data for the same indicator within a single Mission or Washington OU (for instance, different data sources, reporting frequency, or known data limitations), the PIRS should document these differences in the relevant fields. An indicator's PIRS must be accessible by relevant Mission or Washington OU staff using that indicator and shared with partners who will be collecting data for that indicator.

The standard USAID PIRS Template is recommended, but an OU may store indicator-reference information in an information system. [ADS 201maf, Performance Indicator Reference Sheet \(PIRS\) Guidance and Template](#), describes the required indicator-reference information for performance indicators.

While context indicators are not required, if a Mission's PMP or an Activity MEL Plan includes them, the Mission should document indicator-reference information on them. A Mission may do this by completing a [Context-Indicator Reference Sheet \(CIRS\)](#), or by documenting the location of existing reference information when a third party collects the indicator data.

## E. Indicator Baseline

The indicator baseline is the value of a performance indicator immediately prior to the start of the intervention or interventions expected to lead to a result (output or outcome) measured by that performance indicator. Baseline data enable the tracking of changes that occurred during the project or the activity among the project's or activity's target population(s).

All performance indicators are required to have baseline data. Baseline data should be collected before the start of the intervention or interventions that are

*Text highlighted in yellow indicates that the material is new or substantively revised.*

expected to lead to a result (output or outcome) measured by that performance indicator. If baseline data cannot be collected until later in the course of a strategy, project, or activity, the indicator's PIRS should document when and how the baseline data will be collected.

While not required, it is recommended that context indicators have baseline data.

## F. Indicator Target

The indicator target is the specific, planned level of result to be achieved within a specific timeframe with a given level of resources. Targets should be ambitious but achievable given USAID (and potentially other donor or partner) inputs. OUs are accountable for assessing progress against their targets. Rationales for targets aid in understanding deviations from targets in actual data and help ensure continuity of target setting over time. Rationales for targets should be maintained and updated in a PIRS.

In coordination with COs, CORs/AORs/GATRs and activity implementing partners must establish targets for each activity-level performance indicator in an Activity MEL Plan prior to reporting actual data. OUs must document targets in the Activity MEL Plan. OUs may set targets in consultation with a partner government, as appropriate.

Context indicators do not have targets; however, it may be useful to set a trigger for context indicators. A trigger is a value or threshold which, if crossed, would prompt an action, such as reexamination of the Results Framework or logic model.

## G. Indicator Disaggregation

Disaggregating indicator data is valuable for understanding and using indicator data. Disaggregated data are indicator data broken out by key categories of interest (such as demographic characteristics).

Each reported disaggregate of a performance indicator must have the same data type and reporting frequency as the aggregated value of the performance indicator. Each disaggregate of a performance indicator must have a calculated baseline. When useful for programming or learning purposes, disaggregated data should have a projected target (see [Disaggregating Monitoring Data](#) for additional guidance).

Sex: Performance indicators must be disaggregated by sex when measuring person-level data (see [ADS 205](#)).

Geography: It is recommended that indicator data be disaggregated by a geographical level that is feasible and useful for management purposes (see [Monitoring Data Disaggregation by Geographic Location](#); and [ADS 579saa](#)).

*Text highlighted in yellow indicates that the material is new or substantively revised.*

[Geographic Data Collection and Submission Standards](#); and [ADS 579mab, Activity Location Data](#) for additional guidance).

OUs should determine if any additional disaggregated data are useful for effective monitoring and achievement of results. These may include age, marital status, and possible other considerations related to sector and country context (see [Monitoring Data Disaggregation by Geographic Location](#) for additional guidance).

## H. Indicator Data

OUs must store performance-indicator data in an indicator-tracking table or information system that allows quantitative analysis of indicator data. Beginning in FY 2021, USAID OUs must use the Agency-wide portfolio-management system, the Development Information Solution (DIS).

Performance-indicator data should include baseline values, the baseline timeframe, and actual values. Standard Foreign Assistance Indicators reported in the PPR and performance indicators in Activity MEL Plans must also include targets. Tracking tables or information systems to store indicator data may also include narrative fields for describing a rationale for each target and deviations from a target. A Mission may also include context indicator data and other monitoring data in a tracking table or information system. OUs must review indicator data at least annually and should update them per the reporting frequency set in the PIRS.

The Agency recommends monitoring-information systems or centralized indicator tracking tables that will serve as a centralized repository and enable analysis of monitoring data collected for PMPs and Activity MEL plans over decentralized tracking tables and other formats that do not enable Mission-wide analysis. OUs must protect USAID's beneficiaries by preventing the unauthorized access and use of Personally Identifiable Information. For additional resources about proper handling of information about individuals, see [ADS 508, Privacy Program](#). For additional resources about the sharing and dissemination of data that includes information about individuals, please see [ADS 579, USAID Development Data](#).

### 201.3.5.7 Ensuring the Quality of Performance-Monitoring Data

Effective Date: 10/28/2020

High-quality data are the cornerstone for evidence-based decision-making. OU Program and Technical Offices must ensure the appropriate collection, management, and reporting of data to support management needs. Data that do not meet USAID's data-quality standards could cause an erosion of confidence in our programs and result in poor decision-making.

#### a. Data-Quality Standards

*Text highlighted in yellow indicates that the material is new or substantively revised.*

OUs use a variety of data sources for their monitoring needs. To ensure performance-indicator data are credible and sufficient for decision-making, OUs and implementing partners must uphold these five standards of data quality:

- **Validity:** Data should represent the intended result clearly and adequately.
- **Integrity:** Data collected should have safeguards to minimize the risk of bias, transcription error, or manipulation.
- **Precision:** Data should have a sufficient level of detail to permit informed management decision-making.
- **Reliability:** Data should reflect stable and consistent data-collection processes and analysis methods over time.
- **Timeliness:** Data should be available at a useful frequency, should be current, and should be timely enough to influence management decision-making.

When data do not meet one or more of these standards, OUs should document the limitations and establish plans for addressing them. OUs should file the completed documentation with the relevant PIRS (see [Performance Indicator Reference Sheets \(PIRS\) Guidance and Template](#)).

#### b. **Data-Quality Assessments (DQA)**

To ensure high-quality performance-monitoring data, OUs must conduct a DQA for each performance indicator they report to external entities, including, but not limited to, indicators reported in the PPR. OUs must not report externally any USAID data that have not had a DQA. OUs may conduct DQAs remotely in non-permissive environments.

OUs use DQAs to do the following:

- Identify the strengths and weaknesses of performance-indicator data, as determined by applying the five data-quality standards above;
- Determine if the data are of sufficient quality to influence management decisions;
- Participate in, and reinforce, data-quality practices to build USAID's capacity and confidence in the collection and use of data; and
- Strengthen USAID's understanding of the data-collection methods of implementing partners and their implementation of activities.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

OUs must conduct a DQA for each performance indicator reported to entities external to the OU. The DQA must occur after the collection of the data on a new performance indicator and within the 12 months prior to the external reporting of the indicator data for the first time (such as in the PPR or external communication documents). After the initial DQA, OUs must conduct a DQA every three years thereafter, but may choose to conduct DQAs more frequently if needed.

An OU that reports performance-indicator data is responsible for the quality of the indicator's data, and must document the results of each indicator's DQA in the relevant PIRS (see [ADS 201sae, USAID Recommended Data Quality Assessment \(DQA\) Checklist](#), [How-To Note: Conduct a Data Quality Assessment](#), and [Performance Indicator Reference Sheets \(PIRS\) Guidance and Template](#) for additional guidance).

### **201.3.6 Evaluation**

Effective Date: 10/28/2020

Evaluation uses systematic data-collection and analysis of information about the characteristics and outcomes of one or more organizations, programs, policies, Strategies, projects, and activities as a basis for judgments to improve effectiveness and timed to inform decisions about current and future programming. Evaluation is distinct from assessment (which is forward-looking) or an informal review of projects. When USAID needs information on whether an intervention is achieving a specific outcome, the Agency prefers impact evaluations to performance evaluations.

The purpose of evaluations is twofold: to ensure accountability to stakeholders, and to learn to improve development outcomes. The subject of a USAID-funded evaluation may include any level of USAID programming, from a [policy, to a Strategy](#), to a project, individual award, activity, intervention, or even cross-cutting programmatic priority.

Tools and guidance for planning, managing, and learning from evaluations are available in the [USAID Evaluation Toolkit](#).

#### **201.3.6.1 Applicability of Guidance for Evaluation**

Effective Date: 10/28/2020

The guidance in section **201.3.6** on evaluation is generally applicable to all OUs. However:

- a. Evaluation requirements based on CDCS, RDCS, or other Strategy processes apply only to Missions and OUs with Strategies.
- b. Evaluation guidance based on processes to design and implement projects only apply to projects.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- c.** Except where otherwise indicated (such as exceptions to the public disclosure of evaluation reports), Mission Directors and heads of Washington Bureaus/IOs can approve rare exceptions to evaluation requirements. OUs must document any exceptions in a memorandum that outlines the reason for the exception and shows evidence of approval by a Mission Director or, in the case of Washington OUs, head of Bureau/IO. All OUs must share copies of approved memoranda with PPL/LER; Missions must share them with the M&E POC of the relevant Regional Bureau. CORs/AORs/GATRs must upload copies of such memoranda into [ASIST](#).
- d.** President's Emergency Plan for AIDS Relief (PEPFAR): Projects and activities funded with 50 percent or more in HIV funds are exempt from the evaluation requirements in section **201.3.6.5**. USAID is required by the terms of an interagency agreement with the Department of State to follow the PEPFAR Evaluation Standards of Practice.
- e.** Emergency Food Assistance, Disaster Assistance, and Transition Assistance: Activities targeted at preventing, mitigating, responding to, recovering from, and transitioning from crisis are exempt from the requirements in section **201.3.6** related to the planning and timing of evaluations. Within their evaluation efforts, these activities should adhere to the quality standards for evaluation as feasible. These activities include the following:
- Disaster and emergency food assistance managed by BHA; and
  - Activities managed by OTI within CPS or activities funded with the CCF managed by Missions

### **201.3.6.2 Principles and Standards of Evaluation**

Effective Date: 10/28/2020

Evaluations at USAID should be:

- Integrated into the Design of Strategies, Projects, and Activities: Planning for evaluation and identifying key evaluation questions at the outset will improve the quality of strategic planning and the design of projects and activities, and will guide the collection, management, use, and delivery of data during implementation.
- Unbiased in Measurement and Reporting, Independent, and Objective: USAID must undertake evaluations so they are not subject to the perception or reality of biased measurement or reporting because of conflict of interest or other factors. Evaluators should strive for objectivity in the planning and conduct of evaluations

*Text highlighted in yellow indicates that the material is new or substantively revised.*

and in the interpretation and dissemination of findings, avoiding conflicts of interest, bias, and other partiality.

- **Relevant and Useful:** Evaluations will address the most important and relevant questions about strategies, projects, or activities that routine monitoring data alone, or other existing evaluations and studies, typically cannot answer, and that serve the informational needs of stakeholders. Evaluations should present information in ways that are understandable and that can inform the Agency's activities, such as budgeting, the improvement of programs, accountability, learning, adaptation, management, and the development of policies. Impact evaluations anticipated to influence \$100 million or more of spending might be subject to the requirements for reporting and dissemination contained in [ADS 578](#).
- **Based on Best Methods of Appropriate Rigor:** Evaluations will use the most appropriate design and methods to answer key questions that generate the highest-quality, and most credible data and evidence that corresponds to the questions being asked, while taking into consideration time, budget, scale, feasibility, and other practical considerations. Evaluations must produce well-documented findings that are verifiable, reproducible, and on which stakeholders can confidently rely, while providing clear explanations of limitations. Qualified evaluators with relevant education, skills, and experience for the methods undertaken must manage credible evaluations.
- **Oriented toward Reinforcing Local Ownership and National Self-Reliance:** The conduct of evaluations will be consistent with institutional aims of local ownership through respectful engagement with all partners, including local beneficiaries and stakeholders, while leveraging and building local evaluation capacity. When possible, evaluators should include relevant local stakeholders in determining the timing, questions, and design of an evaluation; the joint development of its recommendations; and strategies for the dissemination and use of its findings.
- **Transparent:** Evaluation must be transparent in the planning, implementation, and reporting phases to enable accountability. Before conducting an evaluation, OUs should clearly document decisions about its purpose and objectives, key stakeholders, design and methods, and its timeline and dissemination plan. These decisions should take into consideration any legal, ethical, national security, or other constraints for disclosing information. USAID commits to full and active disclosure and will share findings from evaluations as widely as possible.
- **Conducted According to the Highest Ethical Standards:** USAID must conduct evaluations to the highest ethical standards to protect the public and maintain public trust in the U.S. Government's efforts. OUs should plan and implement

*Text highlighted in yellow indicates that the material is new or substantively revised.*

evaluations to safeguard the dignity, rights, safety, and privacy of participants and other stakeholders and affected entities. Evaluators should abide by current professional standards and legal requirements that pertain to the treatment of participants. Evaluations should be equitable, fair, and just, and should consider cultural and contextual factors that could influence the findings or their use.

**201.3.6.3 The Roles of Missions and Washington Operating Units in Evaluation**  
Effective Date: 10/28/2020

Each Mission and Washington OU Program Office must identify a POC that will lead processes and good practice in monitoring and evaluation; ensure compliance with ADS policies on monitoring and evaluation across the breadth of the Mission's or Washington OU's projects and activities; and interact with the POCs in the Regional and Technical Bureaus, and with PPL/LER.

**a. Mission Program Offices**

Mission Program Offices will manage external evaluations for all but the most exceptional cases to encourage the independence of external evaluations.

Mission Program Offices will lead the process of planning evaluations and develop a budget estimate for the evaluations to be undertaken. Program Offices provide information on planned, ongoing, and completed evaluations in USAID's Evaluation Registry available in the [FACTS Info Next Gen](#) system. They help identify the appropriate evaluation procurement mechanisms; organize in-house peer technical reviews to assess compliance with the ADS and the quality of the Scopes of Work (SOW) for evaluation and draft evaluation reports; share important preliminary findings with relevant stakeholders throughout the life of an evaluation; and develop post-evaluation action plans. Program Offices and the Evaluation AOR/COR ensure that evaluation SOWs and awards include requirements for the management and delivery of evaluation data and results to USAID, as well as ensure the delivery of final evaluation data and required documentation of the [Development Data Library \(DDL\)](#) and the posting of final evaluation reports to the [Development Experience Clearinghouse \(DEC\)](#) (see [ADS 579, USAID Development Data](#), for additional guidance).

**b. Mission Technical Offices**

Mission Technical Offices will provide substantive technical input to the planning of evaluations led by Mission Program Offices; the development of the evaluation SOW; ensure that implementing partners of the project or activity that will be evaluated are aware of any planned evaluations, the timeline, and the scope of their expected engagement; ensure that the evaluation team has all relevant background materials detailed in the SOW; provide additional documents, as feasible, upon the request of the evaluation team; provide technical input during the review of the evaluation design and draft evaluation report; and participate in discussion of post-evaluation action planning.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

### c. Washington OUs

Washington OUs support Missions in fulfilling evaluation requirements by participating in peer reviews of evaluation SOWs and draft evaluation reports; supporting the review of evaluation data delivered to the Agency; assisting in the development of Mission-wide PMPs and Activity MEL Plans; reviewing data in the Agency's Evaluation Registry, available in the [FACTS Info Next Gen](#) system, and providing other support as requested by Missions.

Washington OUs must follow evaluation guidance described in sections **201.3.6.1** through **201.3.6.10**. Washington OUs may develop Bureau-specific guidance for the division of evaluation management responsibilities between Program Offices and Technical Offices provided that evaluation independence is addressed and protected.

For detailed information about staff roles and responsibilities for evaluation, see [ADS 201sal, Staff Roles and Responsibilities for Monitoring, Evaluation, and Learning](#).

#### **201.3.6.4**    **Types of USAID Evaluations**

Effective Date: 10/28/2020

USAID categorizes evaluations as impact or performance evaluations depending on the purpose, evaluation questions, and the corresponding design.

Impact Evaluations measure changes in development outcomes that are attributable to a defined intervention, program, policy, or organization. Impact evaluations use models of cause and effect and require a credible and rigorously defined counterfactual to control for factors other than the intervention that might account for observed changes. When USAID needs information on whether an intervention is achieving a specific outcome, USAID prefers impact evaluations over performance evaluations.

Impact Evaluations must use the following evaluation methods and approaches:

- Experimental Design: Random assignment of an intervention among members of the eligible population to eliminate selection bias, into those who receive the intervention(s) (treatment group(s)) and those who do not (control group); also called a Randomized Controlled Trial (RCT).
- Quasi-Experimental Design: In the absence of an experimental design, the generation of a comparison group through rigorous statistical procedures, such as propensity-score matching, regression discontinuity, or analysis with instrumental variables:
  - A difference-in-difference design is appropriate only if it can demonstrate that, in the absence of treatment, the differences between a treatment and a non-randomly chosen comparison group would be constant over time.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- All impact evaluations must include a cost-analysis of the intervention or interventions being studied.

Performance Evaluations encompass a broad range of evaluation methods. They often incorporate **before-and-after** comparisons, but generally lack a rigorously defined counterfactual. Performance evaluations can address descriptive, normative, and/or cause-and-effect questions. As **performance evaluations do not contain a rigorously defined counterfactual**, they should not answer questions about the amount of change attributable to an intervention, where other factors are likely to have influenced the variable in question.

Performance-evaluation questions can include, but are not limited to, the following topics:

- Whether the theory of change of a strategy, project, or activity is valid;
- Whether the expected results of a particular strategy, project, or activity have been achieved;
- How a particular Strategy, project, or activity is being implemented;
- How it is perceived and valued;
- Whether USAID's assistance contributed to the results achieved;
- Possible unintended outcomes from USAID's assistance;
- Whether outcomes have been, or are likely to be, sustained; and
- Other questions pertinent to the design, management, and operational decision-making of Strategies, projects, or activities.

Performance Evaluations include the following types of evaluations, including those defined by [OMB Memorandum M-20-12](#), which provides Program Evaluation Standards and Practices:

- **Developmental Evaluation:** An approach to the continuous adaptation of interventions through the use of evaluative thinking and feedback, developmental evaluation includes having one or more evaluators embedded in program teams, ideally on a full-time basis, and working with them to contribute to modifications in programmatic design and targeted outcomes throughout implementation.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- **Formative Evaluation:** Conducted to assess whether a program, policy, or organizational approach—or some aspect of these—is feasible, appropriate, and acceptable before it is fully implemented. It can include process and/or outcome measures. A formative evaluation focuses on learning and improvement and does not aim to answer questions of overall effectiveness.
- **Outcome Evaluation:** An outcome evaluation can help answer the question, "Were the intended outcomes of the program, policy, or organization achieved?"; however, unlike an impact evaluation, it typically cannot discern causal attribution.
- **Process or Implementation Evaluation:** Assesses how the program or service is delivered relative to its intended theory of change, and often includes information on content, quantity, quality, and structure of services provided. These evaluations can help answer the question, "Was the program, policy, or organization implemented as intended?" or "How is the program, policy, or organization operating in practice?"

A single evaluation can be designed to use a variety of methods and to address a variety of purposes. In cases in which an evaluation uses methods that meet the definition of an impact evaluation, but also uses other methods to address questions more commonly addressed in performance evaluations, the evaluation will be classified as an impact evaluation.

The selection of method or methods for a particular evaluation should consider the appropriateness of the evaluation's design for answering the evaluation questions and the availability and accessibility of primary and/or secondary data, as well as balance cost, feasibility, and the level of rigor needed to inform specific decisions.

### **201.3.6.5 Evaluation Requirements**

Effective Date: 10/28/2020

OUs should devote approximately one to three percent of their total program funding to external evaluation, on average. Missions should consider evaluations in their CDCSS and by all Washington OUs in the early stages of the design of projects and activities to ensure adequate planning and implementation.

OUs must evaluate the majority of their Program resources through a combination of required and non-required, external, and internal, evaluations.

Evaluations are required as follows:

**Requirement 1:** Each OU or Mission with a CDCS, RDCS or other strategy must conduct at least one evaluation per intermediate result (IR) defined in the OU's strategy.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

This evaluation can focus on any level within the IR: intervention, activity, set of activities, or the intermediate result as a whole.

**Requirement 2:** OUs must conduct at least one evaluation per activity (contracts, orders, grants, and cooperative agreements) with a TEC/TEA expected to be \$20 million or more.

**Requirement 3:** Each Mission and Washington OU must conduct an impact evaluation, if feasible, of any new, untested approach anticipated to expand in scale or scope through U.S. Government foreign assistance or other funding sources (*i.e.*, a pilot intervention). OUs should identify pilot interventions during the design of projects or activities and should integrate the impact evaluation into their design. If it is not feasible to effectively undertake an impact evaluation, the Mission or Washington OU must conduct a performance evaluation and document why an impact evaluation was not feasible. An evaluation of a pilot intervention may count as one of the evaluations required under Requirement 1.

All OUs may conduct non-required evaluations for learning or management purposes as needed at any point **during or after** implementation of the Strategy, project, or activity (see [ADS 201saf, Evaluation Triggers](#)).

Although evaluations should be planned during project and activity design, there is no Agency-wide requirement concerning when an evaluation must be conducted in relation to the timeframe of the activity or project being evaluated. Evaluations may be **ongoing throughout implementation (e.g., a developmental evaluation)**, or mid-term, final, ex-post, or conducted at any time that is appropriate for the decisions that the evaluation is designed to inform. Nor is there a requirement related to the overall length of time of an evaluation, as both impact and performance evaluations may include multiple periods of data collection and analysis. Evaluations should be timed so that their findings can inform decisions such as, but not limited to, course corrections, exercising option years, designing a follow-on project, or creating a country or sector strategic plan.

### **201.3.6.6 Evaluation Independence**

Effective Date: 10/28/2020

To mitigate the potential for conflicts of interest, evaluations conducted to meet evaluation requirements described in section **201.3.6.5** must be external—*i.e.*, led by an expert external to USAID who has no fiduciary relationship with the implementing partner.

The outside expert who **leads an external evaluation** may come from another U.S. Government agency uninvolved in project implementation or be engaged through an A&A mechanism. In cases where an OU's management determines that appropriate expertise exists within the Agency, and that engaging USAID staff in an evaluation will

*Text highlighted in yellow indicates that the material is new or substantively revised.*

facilitate institutional learning, an external evaluation team may include USAID staff under the direction of the external team leader.

For external evaluations, all external evaluation team members will provide a signed statement attesting to a lack of conflict of interest or describing an existing conflict of interest relative to the project or activity being evaluated.

In Missions, Program Office staff should manage external evaluations to enhance evaluation independence. Program Office staff should be supported by Technical Office team members, other knowledgeable members of a U.S. Government Operating Unit, or partner organizations. Exceptions to Program Office management of external evaluations may be approved by the Mission Director, provided that efforts are taken to separate the management of the evaluation from the management of the project or activity under evaluation.

Washington OUs may develop Bureau-specific guidance for the division of evaluation management responsibilities between Program Offices and Technical Offices provided that evaluation independence is addressed and protected.

Internal evaluations are those that are either: 1) commissioned by USAID in which the evaluation team leader is a USAID staff member (a USAID internal evaluation); or 2) conducted or commissioned by an implementing partner—or consortium of implementing partner and evaluator—concerning their own activity (an implementer internal evaluation). Funding may be dedicated within a project or activity design for implementing partners to engage in an internal evaluation for institutional learning or accountability purposes.

Internal evaluations do not typically count toward the evaluation requirements described in section **201.3.6.5**. However, an OU may request to use an internal evaluation to meet evaluation requirements in cases in which the OU believes the evaluation meets or exceeds the evaluation standards in section **201.3.6.2**. The OU must provide such a request in an action memorandum for approval by the Agency's Evaluation Officer or his or her designee. To the extent possible, internal evaluations should follow the same processes and procedures that apply to external evaluations. Internal evaluations are subject to the same evaluation report requirements and quality criteria as described for external evaluations.

### **201.3.6.7 Planning Evaluations**

Effective Date: 10/28/2020

Evaluations will use methods that generate the highest-quality and most credible evidence that corresponds to the questions being asked, while taking into consideration time, budget, and other practical considerations. A combination of qualitative and quantitative methods applied in a systematic and structured way yields valuable findings and is often optimal regardless of evaluation design. Impact evaluations must use

*Text highlighted in yellow indicates that the material is new or substantively revised.*

experimental methods (randomization) or quasi-experimental methods and may supplement these with other qualitative or quantitative methods to increase understanding of how or why an intervention achieved or did not achieve an expected impact.

Once Missions and Washington OUs have determined the need for an evaluation, they should engage stakeholders, including beneficiaries, local partners, implementing partners, and other USAID and U.S. Government entities, to inform the development and prioritization of the evaluation's questions. OUs should consider joint evaluations with other development actors. OUs should review existing available and accessible data to determine if additional primary data-collection is necessary to answer evaluation questions.

Missions must develop and update information on planned evaluations in the Mission PMP and/or Evaluation Registry available in the [FACTS Info Next Gen](#) system (see section **201.3.2.15**) as they plan evaluations. During strategic planning and the design of projects and activities, Missions should consider whether to plan for an ex-post evaluation to better assess sustainability of outcomes over time and after USAID support has ended.

In planning an evaluation, an OU may undertake assessment of evaluability as an initial step to increase the likelihood that an evaluation will provide timely and credible information for decision-making. Evaluability Assessment is a process that examines the extent to which an activity or project can be evaluated in a reliable and credible fashion. It helps in determining whether an OU should undertake an evaluation, and, if so, what questions it should ask and how to design the evaluation (see [Conducting an Evaluability Assessment for USAID Evaluations](#)).

Regardless of an evaluation's scope, the Mission or Washington OU planning process should involve the following steps:

- Clarifying the evaluation purpose, audience, and timing;
- Reviewing and understanding the development hypothesis or theory of change;
- Reviewing past evaluations and research that could inform the planning of an evaluation;
- Identifying the type of desired evaluation (performance or impact);
- Identifying a small number of evaluation questions (between one and five questions are recommended) that are answerable with empirical evidence;

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- Considering the availability and quality of primary and/or secondary data sources;
- Considering data-management needs related to the collection, use, and delivery of evaluation data, information, and other findings to support reporting, dissemination, and continued learning;
- Considering evaluation methods that are rigorous and appropriate to the evaluation purpose, and that are best-suited to answering the evaluation questions;
- Considering the appropriate expertise needed; and
- Considering evaluation products and channels for dissemination.

For more information, see [Developing an Evaluation SOW](#).

These steps should be used to inform the evaluation's SOW, which provides the framework for the evaluation and communicates the evaluation questions; see [ADS 201mab, USAID Evaluation Statement of Work Requirements](#). The evaluation's SOW is needed to implement evaluations through external entities, and also serves to guide internal evaluations with modifications as appropriate.

To ensure a high-quality evaluation that adheres to requirements, the draft SOW must undergo a peer review organized by the office that is managing the evaluation. OUs may involve peers from relevant Regional and/or Technical Bureaus in the review process as appropriate (see [ADS 201sah, Evaluation SOW Peer Review Process](#)).

OUs must design evaluations to be useful to decision-making and develop an Evaluation Dissemination Plan. Missions or Washington OUs should consider how key partners and other development actors would best receive information from the evaluation and plan their communications products accordingly, including by using products in addition to the evaluation report to share its findings, such as slide decks, videos, infographics, podcasts, or other means (see [ADS 201saj, Developing an Evaluation Dissemination Plan](#)). OUs should also consider including evaluation questions to examine the extent to which USAID's programs address gender issues and whether addressing key gender gaps has resulted in better development outcomes (see [How-To Note: Engendering USAID Evaluations](#)).

### **201.3.6.8 Evaluation Implementation**

Effective Date: 10/28/2020

While the SOW will propose evaluation questions and recommended methods, the questions and methods may be altered once the evaluation team is recruited and further

*Text highlighted in yellow indicates that the material is new or substantively revised.*

develops the evaluation design. Such revisions are permitted as part of the evaluation design process but should be made in consultation and agreement with USAID and be appropriately documented.

Evaluations must be conducted by individuals with appropriate training and experience, including, but not limited to, evaluation specialists **and technical or subject-matter experts, including local experts**. To the extent possible, evaluation specialists with appropriate expertise from partner countries, but not involved in project implementation, will lead and/or be included in evaluation teams.

The CO may have to place restrictions on an evaluation contractor's future work due to organizational conflicts of interest (see [ADS 302](#)).

Evaluations will use methods that generate the highest-quality and most credible evidence that corresponds to the questions being asked, taking into consideration time, budget, and other practical considerations. A combination of qualitative and quantitative methods applied in a systematic and structured way yields valuable findings and is often optimal regardless of evaluation design. Impact evaluations must use experimental methods (randomization) or quasi-experimental methods and may supplement these with other qualitative or quantitative methods to increase understanding of how or why an intervention achieved or didn't achieve an expected impact.

For USAID evaluations of all types, the methods, main features of data-collection instruments, data analysis plans, as well as the key questions must be described in a written evaluation design by the evaluators. Except in unusual circumstances, the key elements of the design must be shared with implementing partners of the projects or activities addressed in the evaluation and with related funders before being finalized. After finalization of the design, it must be shared with the relevant implementing partners and funders and be made available upon request to development actors in a format deemed appropriate by the Mission or Washington OU.

**In addition to the collection and analysis of other primary and secondary data, evaluations should use relevant monitoring data and feedback from beneficiaries already collected by implementing partners as data sources, when appropriate. In addition, evaluations may directly collect and analyze feedback from program beneficiaries when relevant and feasible.**

OUs are responsible for actively overseeing the work of evaluation teams over the course of the evaluation, including, but not limited to, reviewing evaluation designs and work plans, **data-collection tools, plans and tools for the management and analysis of data, and draft or interim products and reports (including data to be submitted as deliverables under the award)**. Mission and Washington OUs should ensure that evaluations are conducted with ethical integrity and respect for the dignity and rights of evaluation participants and stakeholders.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

When collecting data, from either primary or secondary sources, USAID's staff, partners, and evaluation teams must follow appropriate procedures articulated in U.S. law, local legal requirements, and/or USAID policy when creating, collecting, using, processing, storing, maintaining, disseminating, disclosing, and disposing of data about individuals and entities, whether participants and evaluated entities provided the data, or whether they consist of administrative or other data created or obtained from other sources.

### **201.3.6.9 Evaluation Reports**

Effective Date: 10/28/2020

To ensure a high-quality evaluation report, the draft report must undergo a peer review organized by the office that is managing the evaluation. The OU should review the evaluation report against [ADS 201maa, Criteria to Ensure the Quality of the Evaluation Report](#). OUs may also involve peers from relevant Regional and/or Technical Bureaus in the review process as appropriate (see [ADS 201sai, Managing the Peer Review of a Draft Evaluation Report](#)).

Draft reports must be shared with implementing partners of the projects or activities addressed in the evaluation and with related funders. Implementers, funders, and members of the evaluation team must be given the opportunity to write an individual statement of difference regarding any significant unresolved differences of opinion, to be attached to the final evaluation report.

Evaluation reports must meet the requirements described in [ADS 201mah, USAID Evaluation Report Requirements](#). In addition, Impact Evaluation reports must also meet requirements to provide sufficient statistical data for USAID and other users to understand how the evaluation defined the counterfactual.

While all evaluations must have a report that meets the requirements described in [ADS 201mah](#), OUs may request other dissemination products as a means of sharing an evaluation's findings, such as a summary in the form of a PowerPoint or similar presentation. OUs must upload these materials (including slide decks, evaluation summary, learning brief) to the [DEC](#) along with the evaluation report and submit the evaluation's data to the [DDL](#). Evaluation reports and other products must also conform to USAID's branding requirements (see [ADS 320, Branding and Marking](#)) and comply with Section 508 of the Rehabilitation Act of 1973, as amended (see [ADS 302mak, USAID Implementation of Section 508 of the Rehabilitation Act of 1973](#)).

### **201.3.6.10 Use of Evaluations**

Effective Date: 10/28/2020

The value of an evaluation is in its use. OUs should use evaluations to inform their and the Agency's decision-making, and contribute to learning, and to help improve the

*Text highlighted in yellow indicates that the material is new or substantively revised.*

quality of development programs. OUs also should distribute evaluation results widely, to both internal and external stakeholders.

#### a. Responding to the Findings of Evaluations

To help ensure that institutional learning takes place and evaluation findings are used to improve development outcomes, Mission and Washington OUs must develop a Post-Evaluation Action Plan upon completion of an evaluation, with a designated point of contact who will be responsible for overseeing the implementation of the action plan. OUs must review the status of actions across Post-Evaluation Action Plans during Mission portfolio reviews and document when actions are complete.

OUs must take the following steps to develop the Post-Evaluation Action Plan:

- Review the key findings, conclusions, and recommendations systematically;
- Determine and document whether the Mission or Washington OU accepts/supports each conclusion or recommendation;
- Identify any management or other program actions needed based on the evaluation's findings, conclusions, or recommendations; this could include changes to Strategies, projects, activities, or other planning frameworks;
- Assign responsibility and the time frame for the completion of each set of actions;
- Assign a POC responsible for overseeing the implementation of the action plan; and
- Document the expected actions based on the evaluation, responsibilities, time frames, and completion of actions in a Post-Evaluation Action Plan.

#### b. Dissemination of Evaluations

OUs will promote transparency and learning by disseminating evaluations when the evaluation report has been completed. Missions and OUs should update and follow the Evaluation Dissemination Plan developed during the evaluation planning stage and consider dissemination channels in addition to posting the evaluation report and data, such as slide decks, videos, infographics, visualizations, podcasts, or other means of sharing the evaluation findings. Missions and OUs should openly discuss evaluation findings, conclusions, and recommendations with relevant partners, donors, and other development actors.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

Missions can help build local evaluation capacity by sharing evidence from evaluations among development partners.

Evaluation reports, including all Annexes to the report, must be made publicly available by being submitted to the [DEC](#) within three months of the evaluation's conclusion (see [ADS 540, USAID Development Experience Information](#), for standards and other requirements for material submitted to the DEC). In exceptional cases, OUs may request an exemption to the requirement to publish the report publicly on the DEC. The Agency's Evaluation Officer will need to concur with any exemption (see [ADS 201mae, Limitations to Disclosure and Exemptions to Public Dissemination of USAID Evaluation Reports](#), and [ADS 201saq, Action Memo Template for Exception to Public Disclosure of USAID-Funded Evaluation](#)).

OUs must submit data assets created or derived in the process of carrying out an evaluation to the [DDL](#) (see [ADS 579](#) for more information). OUs must ensure that USAID's implementing partners submit datasets—and supporting documentation such as code books, data dictionaries, informed consents, scope, and methodology used to collect and analyze the data—compiled under USAID-funded evaluations to the [DDL](#). OUs should collaborate with implementing partners to maintain links among evaluation reports and supporting datasets.

OUs will provide the relevant requested information about planned, ongoing and completed evaluations in the Evaluation Registry (available in the [FACTS Info Next Gen](#) system) throughout the year, and ensure that the information is up to date and complete at least annually, timed to coincide with the annual PPR process. Non-sensitive information derived from the Registry about ongoing and completed evaluations may be communicated to the public on the USAID website.

### **201.3.7 Collaborating, Learning, and Adapting (CLA)**

Effective Date: 10/28/2020

CLA is USAID's approach to organizational learning and adaptive management. Strategic collaboration, continuous learning, and adaptive management link together all components of the Program Cycle (see [Collaborating, Learning, and Adapting Framework & Key Concepts](#)).

CLA helps ensure that programming is coordinated, grounded in evidence, and adjusted as necessary to remain relevant and effective throughout implementation.

An intentional, systematic, and resourced approach to CLA includes:

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- Generating, capturing, sharing, analyzing, and applying information and knowledge, including performance monitoring data, findings from evaluations and research, and knowledge gained from experience and other sources.
- Understanding the theory of change behind programming, identifying potential gaps in technical knowledge, and developing plans to fill them.
- Learning from a variety of sources, including information and data from monitoring, portfolio reviews, research, evaluations, analyses conducted by USAID or third parties, and knowledge gained from experience. OUs should use learning from multiple sources to develop plans, implement projects, manage adaptively, and contribute to USAID's knowledge base to improve development outcomes.
- Engaging with key stakeholders, including local thought-leaders, beneficiaries, local partners, and other development actors to understand the country context, design projects and activities appropriately, and keep abreast of changes.
- Coordinating efforts within the Mission and among partners and other development actors to share learning with country stakeholders and other USAID Missions and Bureaus, and to extend the Mission's influence and impact beyond its Program funding.
- Pausing periodically to reflect on new learning and knowledge and adapting accordingly.
- Ensuring that sufficient resources are mobilized to support these processes.

Tools and guidance on planning for and implementing CLA approaches are available in the [USAID CLA Toolkit](#).

When planning CLA approaches, Missions should consult [Agency-wide learning agendas](#) to determine whether they can address any learning agenda questions.

**201.3.7.1**      **Applicability of Guidance for Collaborating, Learning, and Adapting**  
Effective Date: 10/28/2020

The guidance in section **201.3.7** that pertains to CLA is generally applicable to all OUs. However:

- a. CLA requirements based on CDCS processes apply only to Missions.
- b. CLA requirements based on processes for the design and implementation of projects only apply to projects.

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- c. Except when otherwise indicated, Mission Directors and heads of Washington Bureaus/IOs can approve rare exceptions to CLA requirements. OUs should document any exceptions in a memorandum to outline the reason for the exception that shows evidence of approval by the Mission Director or, in the case of a Washington OU, the head of the Bureau/IO. OUs should share copies of approved memoranda with PPL/LER; Missions should share them with the M&E POC in the relevant Regional Bureau.
- d. Emergency Food Assistance, Disaster Assistance, and Transition Assistance: Activities targeted at preventing, mitigating, responding to, recovering from, and transitioning from crisis are exempt from **ADS 201** requirements related to **CLA** planning and timing. Within their **CLA** efforts, **these activities** should adhere to the quality standards for CLA as feasible. These activities include the following:
  - Disaster and emergency food assistance managed by BHA; and
  - Activities managed by OTI within CPS, or activities funded with the CCF managed by Missions.

### **201.3.7.2 Principles for Collaborating, Learning, and Adapting**

Effective Date: 10/28/2020

Key considerations for CLA approaches in the Program Cycle include the following:

- CLA efforts should build upon and reinforce existing processes and practices as much as possible rather than creating new ones. Instituting these approaches takes time, and change is likely to be incremental.
- Collaboration and coordination should be approached strategically. Collaboration helps break down sectoral and institutional stovepipes; validates USAID programs against experience and local/contextual knowledge; and enhances the ability of partner country governments, organizations, commercial actors, and individuals to define and pursue their development agendas while informing USAID's work. While the value of collaboration is clear, it takes time and so should be guided by Mission priorities.
- USAID should value and use all forms of knowledge in the development of strategies, projects, and activities and the ways to manage them adaptively. **This includes tacit, experiential, and contextual knowledge.**
- Implementing partners and local and regional actors play a central role in USAID's efforts to be a learning organization. Knowledge and learning should be

*Text highlighted in yellow indicates that the material is new or substantively revised.*

documented, disseminated, and used to help spread effective practices widely for improved development.

### **201.3.7.3 The Roles of Missions in Collaborating, Learning, and Adapting**

Effective Date: 10/28/2020

Staff across each Mission should use CLA approaches throughout the Program Cycle as they help improve development effectiveness. The Mission's Program Office is responsible for meeting CLA requirements and overseeing key CLA activities, such as the Mission's portfolio-review process and incorporating CLA approaches in the Mission's PMP. Missions may consider hiring or assigning a CLA Advisor to ensure that collaborating, learning, and adapting efforts are intentional, systematic, and resourced.

For detailed information about staff roles and responsibilities for CLA, see [ADS 201sal, Staff Roles and Responsibilities for Monitoring, Evaluation and Learning](#).

### **201.3.7.4 Planning for Collaborating, Learning, and Adapting**

Effective Date: 10/28/2020

Missions should integrate CLA throughout strategy, project, and activity planning and implementation. CLA includes many potential elements, and the areas of focus for each Mission will vary depending on the operating context, budget, and other factors.

To plan effectively for CLA, teams should reflect on the current state of their learning practice, decide on priority areas of focus, and develop and plan approaches that address those priorities. As CLA is a context-dependent and flexible practice, each Mission's CLA approaches will be different. Missions may use the CLA Maturity assessment and planning tool to help analyze their current work and decide where to focus future CLA efforts. For more information, see [Collaborating, Learning and Adapting \(CLA\) Maturity Tool Overview](#).

### **201.3.7.5 Using Approaches to Collaborating, Learning, and Adapting**

Effective Date: 10/28/2020

OUs should embed CLA practices throughout the Program Cycle. The level of attention paid to certain activities and processes will vary by Mission, but Missions should focus on, at minimum, the following practices:

- 1) Undertaking strategic collaboration with key partners, both within USAID and externally, at the design phase and during implementation:
  - For a CDCS, for example, this could include planning for collaboration among and between technical, DO, project or support offices and teams; processes for engaging with development actors for input and feedback on the strategy, programs, and context in an ongoing way; or plans for

*Text highlighted in yellow indicates that the material is new or substantively revised.*

Mission-wide fora to share knowledge and learning gained from the implementation of projects or evaluations.

- 2) Identifying learning questions, emerging patterns, cross-cutting themes, critical assumptions and risks, and knowledge gaps in the existing evidence base during the development of a Strategy or the design of a project or activity and implementing approaches to address them.
- 3) Taking regular opportunities to reflect on progress and using that knowledge to adapt accordingly:
  - Opportunities for reflection include portfolio reviews, CDCS mid-course stocktaking exercises, after-action reviews, partner meetings, and other pause-and-reflect activities.
- 4) Conducting activities to support organizational effectiveness.
- 5) Determining how to resource (through staff, funding, and/or implementing mechanisms) CLA processes and activities.

Organizational culture affects CLA approaches, which are more likely to take root in a Mission with a supportive environment. A learning organization supports questioning assumptions actively, seeking evidence, reflecting, and exploring a range of solutions to development problems. Mission management should exhibit support by committing resources and encouraging staff to learn and adapt to change. Missions may decide, based on the results of the [CLA Maturity Tool assessment](#) or other planning, to focus on issues—such as openness, institutional memory, and knowledge sources—as part of the CLA approaches described in the PMP.

Transforming into a more effective learning organization requires sustained commitment. Progress can be slow and is likely to be non-linear. As with any change initiative, it is important to make time for regular reflection on progress. By repeating the [CLA Maturity Tool assessment](#) or other tools at regular intervals—in preparation for or as part of an annual portfolio review, for example—Missions can determine where they are seeing increases or reductions in CLA maturity, and whether improvements align with the goals identified during the initial assessment or if priorities have shifted.

### **201.3.8 Accessibility of Documentation for the Program Cycle**

Effective Date: 10/28/2020

The [USAID Development Experience Clearinghouse \(DEC\)](#) provides the Agency's staff, development partners, and the public with accurate, comprehensive, and timely information on the Agency's development experience. Mission and Washington OUs must submit to the DEC all relevant and appropriate Program Cycle planning, design, implementation, monitoring, evaluation, and learning documentation created by the

*Text highlighted in yellow indicates that the material is new or substantively revised.*

Agency and its implementing partners. [ADS 540, USAID Development Experience Information](#), provides guidance regarding which Program Cycle materials OUs must submit to the DEC, who must submit Program Cycle materials to the DEC, and standards for Program Cycle materials submitted to the DEC .

**201.6****DEFINITIONS**

Effective Date: 10/28/2020

**Accountability**

The establishment of clear responsibility for designing and managing strategies, projects, and activities that articulate theories of change and define development objectives and intermediate results to achieve within a specific timeframe and an estimated level of resources; to achieve and report on results; to manage risks; and to use learning from monitoring, evaluation, and other sources to inform design and management decisions and adapt programming so USAID investments are more effective at achieving measurable development outcomes. (**Chapter 201**)

**Accrual**

The estimated cost of goods and/or services or other performance received but not yet paid for by the Agency, calculated for specific instruments and agreements; helps provide current information on the financial status of an activity, project, or Development Objective (see [ADS 631](#)). (**Chapter 201**)

**Activity**

An implementing mechanism that carries out an intervention or set of interventions to advance identified development result(s). Activities range from contracts or cooperative

*Text highlighted in yellow indicates that the material is new or substantively revised.*

agreements with international or local organizations, to direct agreements with partner governments, to partial credit guarantees that mobilize private capital, among other examples. Activities also include buy-ins under global agreements (e.g., Field-Support agreements) that generate programmatic results in a given country or region. In Missions, activities should contribute to development result(s) set forth in the Mission's Country Development Cooperation Strategy. (Chapter 201)

### **Activity Approval Memorandum (AAM)**

A brief action memorandum that approves an activity design. AAMs may approve one design or multiple, complementary designs, depending on the circumstances. (Chapter 201)

### **Activity Design**

A process by which USAID's Operating Units determine how to advance intended result(s) through a given type of implementing mechanism. The design that results from this process is ultimately approved through a brief Activity Approval Memorandum. In most cases, activity design culminates in a solicitation or the finalization of an agreement. (Chapter 201)

### **Activity Manager**

An individual identified by a Contracting Officer's Representative/Agreement Officer's Representative (COR/AOR) to assist with post-award administrative oversight and monitoring. Principal roles and responsibilities of the Activity Manager can include the following: 1) providing support to the COR/AOR in administering the award; and/or 2) providing support to the COR/AOR in performing monitoring functions (e.g., collaborating with the COR/AOR to conduct site visits, verify monitoring data, conduct periodic data-quality assessments, and/or file monitoring and uploading other required documentation in the [Agency Secure Image and Storage Tracking \(ASIST\) System](#), the Agency's official electronic repository for all documentation for acquisition and assistance awards, all in accordance with Agency policy and the award's terms and conditions). The COR/AOR remains accountable for delegated responsibilities and is the only person authorized to provide technical direction to the contractor or recipient as described in the COR/AOR designation letter. Activity Managers may support the COR/AOR in providing technical and/or administrative oversight of the activity. (Chapter 201)

**Activity Planner** (See "Planner" below)

### **Adaptive Management**

An intentional approach to making decisions and adjustments in response to new information and changes in context. (Chapter 201)

**Agreement Officer's Representative (AOR)** (See "Contracting Officer's Representative" below)

*Text highlighted in yellow indicates that the material is new or substantively revised.*

**Approval for the Use of Partner Government Systems (AUPGS)**

An addendum to the PDD or approval of a standalone G2G activity that documents the due-diligence requirements and associated fiduciary risk-mitigation plan for using PGS. The AUPGS establishes USAID's and the partner government's fiduciary risk-management strategy and guidelines for the life of the respective project. (**Chapter 201** and [220](#))

**Assessment**

A forward-looking process designed to examine country or sector context to inform strategic planning or the design of a project, or an informal review of a Strategy, project, or activity. It is distinct from evaluation. (**Chapter 201**)

**Assumptions**

The stated conditions, behaviors, and/or critical events outside the control of the Strategy, project, or activity that must be in place to achieve results. Assumptions form part of the complete theory of change regarding the conditions under which change is envisioned to occur. (**Chapter 201**)

**Attribution**

Ascribing a causal link between observed changes and a specific intervention. It is the extent to which the observed change is the result of the intervention, considering all other factors which may also affect the outcome(s) of interest. (**Chapter 201**)

**Award**

A form of implementing mechanism through which USAID transfers funds to an implementing partner, generally selected through a competitive process that results in a contract, grant, or cooperative agreement. (**Chapter 201**)

**Baseline**

The value of an indicator before major implementation actions of USAID-funded Strategies, projects, or activities. Baseline data enable the tracking of changes that occurred during the project or activity with the resources allocated to that project or activity. (**Chapter 201**)

**Burn Rate**

The rate at which an implementing partner makes expenditures under an agreement, usually quoted in terms of average expenditure per month during a given period of time. (**Chapter 201**)

**Co-Creation**

Co-creation is a design approach that brings people together to produce collectively a mutually valued outcome, by using a participatory process that assumes some degree of shared power and decision-making. (**Chapter 201**)

**Collaborating, Learning, and Adapting (CLA)**

*Text highlighted in yellow indicates that the material is new or substantively revised.*

CLA is USAID's approach to organizational learning and adaptive management. It involves strategic collaboration, continuous learning, and adaptive management. CLA approaches to development include collaborating intentionally with stakeholders to share knowledge and reduce duplication of effort, learning systematically by drawing on evidence from a variety of sources and taking time to reflect on implementation, and applying learning by adapting intentionally. (Chapter 201)

### **Commitment**

An administrative reservation of funds in anticipation of their obligation. (Chapters 201, 621, 634)

### **Component Activity**

An activity bundled with other activities under a project approach. Taken together, component activities support the achievement of project-level result(s). (Chapter 201)

### **Context**

Conditions and external factors relevant to implementation of USAID's Strategies, projects, and activities. Context includes the environmental, economic, social, or political factors that affect implementation, as well as how local actors, their relationships, and the incentives that guide them affect development results. It also includes risks that might threaten or provide opportunities to achieve greater development impact. (Chapter 201)

### **Context Indicator**

A means to monitor factors outside the control of USAID that have the potential to affect the achievement of expected results. OUs may track context indicators at any level of a Results Framework or logic model. Context indicators may track country/regional context; programmatic assumptions of strategies, projects, and activities; and operational context. Context indicators do not directly measure the results of USAID's activities. (Chapter 201)

### **Context Monitoring**

The systematic collection of information about conditions and external factors relevant to the implementation and performance of an OU's Strategy, projects, and activities. Context monitoring includes the monitoring of local conditions that could directly affect implementation and performance (such as non-USAID programming operating within the same sector as USAID-funded programming) or external factors that could indirectly affect implementation and performance (such as macro-economic, social, or political conditions). It also includes monitoring risks such as programmatic, fiduciary, reputational, legal, security, human capital, and information technology. (Chapter 201)

### **Contingency Operation**

Defined in [Section 101\(a\)\(13\) of Title 10, United States Code, Part I](#) – a military operation that –

*Text highlighted in yellow indicates that the material is new or substantively revised.*

- 1) Is designated by the Secretary of Defense as an operation in which members of the Armed Forces are or may become involved in military actions, operations, or hostilities against an enemy of the United States or against an opposing military force; or
- 2) Results in the call or order to, or retention on, active duty of members of the Uniformed Services under Section 688, 12301(a), 12302, 12304, 12304(a), 12305, or 12406 of this title, Chapter 15 of this title, Section 712 of Title 14, or any other provision of law during a war or during a national emergency declared by the President or Congress. (**Chapter 201** and [411](#))

### **Contracting Officer's Representative/Agreement Officer's Representative (COR/AOR)**

The individual who performs functions designated by the Contracting or Agreement Officer, or who is specifically designated by policy or regulation as part of contract or assistance administration. (**Chapter 201**, [300](#))

### **Country Development Cooperation Strategy (CDCS)**

The strategy that defines a Mission's chosen approach in country and provides a focal point of the broader context for projects and activities. A CDCS presents expected results within a time-defined period, provides a common vision and an organizing framework, and summarizes the status of the ongoing portfolio and how that will be continued, updated, or revised to address new priorities, lessons learned, or changing circumstances. The CDCS is usually five years long. (**Chapter 201**)

### **Country Development Cooperation Strategy Goal**

The highest-level long-term outcome USAID and its development partners will achieve or influence. The Goal could be related to U.S. foreign-policy interests in a country or the country's own national development plan. While USAID is not accountable for achieving the Goal, the Goal should incorporate the purpose of USAID's in-country presence and provide guidance for all choices made within a CDCS. The Mission is responsible for progressing toward the CDCS Goal as it advances toward achieving the DOs. (**Chapter 201**)

### **Country Roadmap**

USAID's primary visualization tool for illustrating each country's overall level of self-reliance, and relative strengths and challenges, by looking at performance on each of the self-reliance metrics that comprise it. While the Country Roadmap cannot capture every issue and nuance driving self-reliance, it is ultimately meant to serve as a conceptual anchor and a set of entry points to gauge a country's overall progress towards self-reliance, and therefore its relative ability to plan, finance, and manage its own development journey. The Agency will produce Country Roadmaps for all low- and middle-income countries on an annual basis and, in so doing, will provide an objective and inclusive snapshot of the full self-reliance journey that encompasses the entire

*Text highlighted in yellow indicates that the material is new or substantively revised.*

developing world—not just to the extent of USAID’s presence or engagement. (Chapter 201)

### **Country Team**

An interagency group made up of the head of each State Department section in the Embassy, the USAID Mission Director, and the heads of the other U.S. Government Departments and Agencies represented at post. (Chapter 201)

### **Data-Quality Assessment (DQA)**

An examination of the quality of performance indicator data in light of the five standards of data quality (validity, integrity, precision, reliability, and timeliness) to ensure decision-makers are fully aware of data strengths and weaknesses and the extent to which data can be relied on when making management decisions and reporting. (See “Data-Quality Standards” below.) (Chapter 201)

### **Data-Quality Standards**

Standards for determining the quality of performance-monitoring data for evidence-based decision-making and credible reporting. The five standards of data quality are 1) validity, 2) integrity, 3) precision, 4) reliability, and 5) timeliness. (Chapter 201)

### **Delegation of Authority (DOA)**

A document that officially recognizes when an official, vested with certain powers (authorities), extends that power (authority) to another individual or position within the chain of command. (Chapter 201)

### **De-Obligation**

The process of removing unneeded funds from an obligating instrument, typically done during the annual review process for the certification of unliquidated balances and the separate certification of the validity of recorded obligations, and upon the completion of activities when unliquidated obligations might have become excessive or might no longer be needed for their original purpose. (Chapter 201)

### **Development Actors**

The range of stakeholders engaged in development efforts in a partner country, often including the partner-country government, civil society, other bilateral and multilateral organizations, non-governmental organizations (NGOs) (both local and international), other U.S. Government Departments and Agencies, and the private sector (both local and international). (Chapter 201)

### **Development Hypothesis**

Describes the theory of change, logic, and relationships between the building blocks needed to achieve or contribute to a long-term result; relies on development theory, practice, literature, and experience; is country-specific; and explains why and how the proposed investments from USAID and others collectively contribute to, or lead to achieving, the Development Objectives in a CDCS. It is a short narrative that explains

*Text highlighted in yellow indicates that the material is new or substantively revised.*

the relationships between results upwards from the sub-Intermediate Results, to the Intermediate Results, to the Development Objectives. (**Chapter 201**)

### **Development Objective (DO)**

Typically the most ambitious result to which a Mission, together with its development partners, can contribute through its interventions. (**Chapter 201**)

### **Development Objective Agreement (DOAG)**

A bilateral obligating document under which a USAID Mission may make sub-obligations for contracts, grants, and cooperative agreements; bilateral project agreements; etc. It generally sets forth a mutually agreed-upon understanding between USAID and the partner government of the timeframe; results expected to be achieved and the means of measuring them; and the resources, responsibilities, and contributions of participating entities for achieving a clearly defined objective. (**Chapter 201**)

### **Development Objective (DO) Team**

A group of USAID employees and those partners and customers with complementary skills empowered to work toward a result outlined in a DO. The primary responsibility of a DO Team is to make decisions in designing and implementing projects that will contribute to the result. Another essential function is to ensure open communication and collaboration across organizational boundaries at all phases of the development process. DO Teams may decide to organize sub-teams if they wish to manage complex projects more efficiently. (**Chapter 201**)

### **Development Policy**

Guidance and analysis that covers the content and substance of USAID's programs, including Agency policies, strategies, and vision papers, as well as U.S. Government policies and those in support of international development agreements and approaches. (**Chapter 201**)

### **Disbursements**

The actual payments made by the Agency for goods and services or other performance under an agreement. (**Chapter 201**)

### **Due Diligence**

The technical term for the necessary assessment of the past performance, reputation, and future plans of a prospective alliance partner, private-sector firm, or other entity with regard to various business practices and principles. This assessment of a prospective alliance partner would normally involve, at a minimum, examining their social, environmental, and financial track records. (**Chapter 201**)

### **Enterprise Risk-Management (ERM)**

An Agency-wide approach to addressing the full spectrum of the organization's external and internal risks by understanding the combined impact of risks as an interrelated portfolio, rather than addressing risks only within silos. (**Chapters 201, [596mab](#)**)

*Text highlighted in yellow indicates that the material is new or substantively revised.*

### **Environmental-Impact Statement**

A detailed study of the reasonably foreseeable positive and negative environmental impacts of a proposed USAID action and its reasonable alternatives on the United States, the global environment, or areas outside the jurisdiction of any nation (see [ADS 204](#) and 22 CFR 216). (Chapter 201)

### **Evaluation (also see “Performance Evaluation,” “Impact Evaluation” below)**

The systematic collection and analysis of data and information about the characteristics and outcomes of one or more organizations, policies, programs, strategies, projects, and/or activities conducted as a basis for judgments to understand and improve effectiveness and efficiency, timed to inform decisions about current and future programming. Evaluation is distinct from assessment (which is forward-looking) or an informal review of projects. (Chapter 201)

### **Evaluation Plan (Mission-wide)**

A plan or list to identify and track evaluations across a Mission and over the entire timeframe of a CDCS. Evaluation plans are a required part of USAID’s Evaluation Registry available in the FACTS Info Next Gen system. (Chapter 201)

### **Evaluation Registry**

The Evaluation Registry is a module in the FACTS Info Next Gen system that includes information, normally drawn from the evaluation plan in the Performance-Management Plan, on completed evaluations during the previous Fiscal Year; and ongoing and planned evaluations for the current Fiscal Year, plus two out years. (Chapter 201)

### **Evidence**

Body of facts or information that serve as the basis for programmatic and strategic decision-making, derived from experiential knowledge, assessments, analyses, performance monitoring, evaluations, research, and statistical activities, sourced from within USAID or externally. Evidence should result from systematic and analytic methodologies, or from observations that are shared and analyzed. Evidence has four interdependent components: foundational fact-finding and research, policy analysis, program evaluation, and performance measurement. Evidence can be quantitative or qualitative and can come from a variety of sources. Evidence has varying degrees of credibility, and the strongest evidence generally comes from a portfolio of high-quality, credible sources rather than a single study. (Chapter 201)

### **Ex-Post Evaluation**

A performance or impact evaluation that examines a Strategy, project, activity, or intervention at least one year after it has ended. (Chapter 201)

### **Expenditures**

*Text highlighted in yellow indicates that the material is new or substantively revised.*

Estimates of the total costs incurred by the Agency for goods and services and other performance received under an activity, whether paid for or not, which equal accruals plus disbursements and offer a valuable indicator of progress in monetary terms of an activity or project. (**Chapters 201, 631**)

### **Experimental Design (of an evaluation)**

The design of an impact evaluation that randomly assigns an intervention among members of the eligible population to eliminate selection bias, so some receive the intervention (treatment group) and some do not (control group); also called a “Randomized Controlled Trial” (RCT). (**Chapter 201**)

### **External Evaluation**

An evaluation that meets both of these criteria: 1) is commissioned by USAID or others, rather than by the implementing partner responsible for the activities being evaluated; and 2) has a team leader who is an independent expert from outside the Agency with no fiduciary relationship with the implementing partner. External evaluations may include USAID staff members, but not as team leader. (**Chapter 201**)

### **Focus**

The operational principle that USAID should focus U.S. Government resources in a manner that is likely to yield the strongest development impact, by concentrating Mission efforts in a specific geographic area, on a specific targeted population, or through a particular sectoral approach. Given that other actors often provide assistance, it is critical that USAID proactively engage other development actors and determine USAID’s comparative advantage. (**Chapter 201**)

### **Foreign Assistance Framework Standardized Program Structure and Definitions**

A listing of program categories that provides common definitions for the use of foreign assistance funds. Most relevant for budget planning and tracking, the definitions identify very specifically and directly what USAID is doing, not why it is doing it. (Also see “Program Area,” “Program Element,” and “Program Sub-Element” below.) (**Chapter 201**)

### **Formative Evaluation**

A type of performance evaluation conducted to assess whether a program, policy, or organizational approach—or some aspect of these—is feasible, appropriate, and acceptable before it is fully implemented. A formative evaluation can include process and/or outcome measures, focuses on learning and improvement, and typically does not aim to answer questions of overall effectiveness. (**Chapter 201**)

### **Forward Funding**

Obligations, typically from funds in the final year of the period of availability, to cover the cost of goods and services the Agency will receive in a subsequent Fiscal Year. (**Chapter 201**)

*Text highlighted in yellow indicates that the material is new or substantively revised.*

**Gender**

A social construct that refers to relations between and among the sexes based on their relative roles. It encompasses the economic, political, and socio-cultural attributes, constraints, and opportunities associated with being male or female. As a social construct, gender varies across cultures, is dynamic, and is open to change over time. Because of the variation in gender across cultures and over time, gender roles should not be assumed but investigated. Note that gender is not interchangeable with women or sex. (Chapter 201)

**Gender Integration**

Identifying and then addressing gender inequalities during strategic planning and the design, implementation, monitoring, and evaluation of projects or activities. Since the roles and relations of power between men and women affect how a project or activity is implemented, it is essential that USAID staff address these issues on an ongoing basis. USAID uses the term “gender integration” in planning and programming. (Chapter 201)

**Gender-Sensitive Indicator**

Indicators that point out to what extent and in what ways development programs and projects achieved results related to gender equality and whether/how reducing gaps between males/females and empowering women leads to better project/development outcomes. (Chapter 201)

**Goal** (See “CDCS Goal” above)

**Government Agreement Technical Representative (GATR)**

An individual typically designated by a Mission Director as part of the administration of partner-government agreements. The GATR, like an AOR or COR for acquisition and assistance awards, has a formal designation letter or memorandum from the Mission Director to define his/her roles, responsibilities, and authorities. (Chapter 201)

**Host Country**

The country in which a USAID-funded activity takes place. (Chapter 201, [252](#), [253](#), [301](#), [305](#), [322](#), [495](#))

**Impact Evaluation**

An evaluation based on models of cause and effect that measures the change in a development outcome that is attributable to a defined intervention and requires a credible and rigorously defined counterfactual to control for factors other than the intervention that might account for the observed change. Impact evaluations that make comparisons between beneficiaries randomly assigned to either a treatment or a control group provide the strongest evidence of a relationship between the intervention under study and the outcome measured. Impact evaluations must use experimental or quasi-experimental designs. (Chapter 201)

**Implementation Letter**

*Text highlighted in yellow indicates that the material is new or substantively revised.*

Formal correspondence between USAID and another party following a formal agreement that obligates funding. Implementation letters serve several functions, including providing more detailed implementation procedures, providing details on terms of an agreement, recording the completion of conditions precedent to disbursements, and approving funding commitments and mutually agreed-upon modifications to program descriptions. (**Chapter 201**)

### **Implementing Mechanism**

A means of implementing a project to achieve identified results, generally through the use of a legally binding relationship established between an executing agency (generally a U.S. Government Department or Agency like USAID or a host government agency) and an implementing entity (contractor, grantee, host-government entity, public international organization, etc.) to carry out programs with U.S. Government funding. Examples of implementing mechanisms include contracts, cooperative agreements, grants, interagency agreements, bilateral project agreements, fixed-amount reimbursement and performance agreements and cash transfers to host-country governments, public-private partnerships, and Development Innovation Venture (DIV) awards. (**Chapter 201**)

### **Implementing Partner**

The executing agency (generally a U.S. Government Department or Agency like USAID or a host-government agency) or the implementing entity (contractor, grantee, host-government entity, public international organization) that carries out programs with U.S. Government funding through a legally binding award or agreement. (**Chapter 201**)

### **Indicator**

A quantifiable measure of a characteristic or condition of people, institutions, systems, or processes that might change over time. (**Chapter 201**)

### **Initial Environmental Examination (IEE)**

The preliminary review of the reasonably foreseeable effects of a proposed action on the environment whose function is to provide a brief statement of the factual basis for a threshold decision as to whether an Environmental Assessment or an Environmental Impact Statement will be required (see [ADS 204](#)). (**Chapter 201**)

### **Input**

A resource, such as **funding, information, or people, including the** provision of USAID staff, whether funded by Operating Expenses (OE) or Program funds, used to create an output. (**Chapter 201**)

### **Instrument**

A contract, cooperative agreement, bilateral agreement, or other legally binding mechanism that obligates or sub-obligates program or Operating Expenses. (**Chapter 201**)

*Text highlighted in yellow indicates that the material is new or substantively revised.*

**Integrated Country Strategy (ICS)**

A multi-year strategy with a whole-of-government focus developed by a U.S. Government Mission overseas. As directed by the Presidential Policy Directive on Security Sector Assistance, the ICS also represents the official U.S. Government strategy for all Security-Sector Assistance in a country. Additionally, and in line with the whole-of-government scope of each ICS, each USAID Mission's CDCS nests within the ICS. Objectives from each ICS are used to frame the Department of State and USAID foreign assistance request in the Congressional Budget Justification. **(Chapter 201)**

**Intermediate Result (IR)**

A component of a Results Framework in a Mission CDCS. An important result that is seen as an essential contribution to advancing a DO. IRs are measurable results that may capture a number of discrete and more specific lower-level results and typically define the purpose of projects. **(Chapter 201)**

**Internal Evaluation**

An evaluation that is either: 1) commissioned by USAID in which the evaluation team leader is USAID staff (a USAID internal evaluation); or 2) conducted or commissioned by an implementing partner—or consortium of implementing partner and evaluator—concerning their own activity (an implementer internal evaluation). **(Chapter 201)**

**Intervention**

A specific action that takes place under an activity, typically performed by an implementing partner. **(Chapter 201)**

**Joint Regional Strategy (JRS)**

The JRS is a three-year strategy developed collaboratively by the Department of State and USAID Regional Bureaus to identify the priorities, goals, and areas of strategic focus within a region. The JRS aims to provide a forward-looking and flexible framework within which Bureaus and Missions can prioritize engagement and resources and respond to unanticipated events. The JRS process will be co-led by the State and USAID Regional Bureaus, with participation and input from stakeholders from relevant functional and Technical Bureaus. Missions will be involved in JRS development, as the JRS will set the general parameters to guide Mission planning. Bureaus will develop the JRS in the fall, in advance of the Mission and Bureau budget-build process, so that it can serve as the foundation and framework for resource planning and for the analysis and review of the annual Mission and Bureau budget requests. Bureaus will complete a JRS once every three years, with the ability to adjust it in interim years as circumstances necessitate. **(Chapter 201)**

**Key Risk Indicators (KRIs)**

Indicators that relate to a specific risk and demonstrate a chance in the likelihood or impact of the risk event occurring. **(Chapter 201)**

**Learning**

*Text highlighted in yellow indicates that the material is new or substantively revised.*

A continuous organizational process throughout the Program Cycle of analyzing a wide variety of information sources and knowledge, including evaluation findings, monitoring data, research, analyses conducted by USAID or others, and experiential knowledge of staff and development actors. **(Chapter 201)**

### **Learning Agenda or Learning Plan**

A systematic plan for identifying and addressing critical learning priorities and knowledge gaps through answering priority questions relevant to the programs, policies, and regulations of an Agency or at the sub-agency level. Learning agendas should articulate critical questions, how to address them, and how to use the resulting evidence. More broadly, a learning agenda is a coordination tool for engaging stakeholders in evidence planning and building. In Missions, the learning priorities in the CDCS and Performance-Management Plan reflect learning agendas. USAID's Agency-wide Learning Agenda is equivalent to the Agency evidence-building plan required in Section JOI of the Evidence Act (Section 312(a) of Title 5 of the United States Code). **(Chapter 201)**

### **Learning Priorities**

A list of key themes or topics critical to programmatic and operational decisions and implementation for the Agency; an Operating Unit; sector; strategy; project; activity; or a specific initiative. Learning priorities can include emerging patterns, cross-cutting themes, knowledge gaps in the existing evidence base, critical assumptions, identified (or emergent) risks, and points of connection with scenario planning or with context monitoring. Learning priorities come from various sources and inform learning agendas. **(Chapter 201)**

### **Learning Questions**

Learning questions are specific, answerable, need-to-know questions that can be answered through monitoring, evaluation, research, or other analysis to address learning priorities incrementally. Several learning questions can cluster under a single learning priority and can contribute to a broader learning agenda or plan. **(Chapter 201)**

### **Leverage**

Significant resources mobilized from non-U.S. Government sources. USAID seeks the mobilization of resources of other actors on a 1:2 or greater basis (*i.e.*, 50 percent of the proposed value of the award). Leveraged resources can include grants/awards from non-U.S. Government organizations and other donor governments. **(Chapters 201, 303, 623)**

### **Local Ownership**

The commitment and ability of local actors—including the governments, civil society, the private sector, universities, individual citizens, and others—to prioritize, fund, and implement development, so that development outcomes have a greater potential to be sustained and generate lasting change without USAID's assistance. **(Chapter 201)**

*Text highlighted in yellow indicates that the material is new or substantively revised.*

### **Local System**

Interconnected sets of actors—governments, civil society, the private sector, universities, individual citizens, and others—that jointly produce a particular outcome. **(Chapter 201)**

### **Locally Established Partner (LEP)**

A U.S. or international organization that works through locally-led operations and programming models. LEPs:

- Have maintained continuous operations in-country for at least five years and materially demonstrate a long-term presence in a country through adherence or alignment to the following:
  - Local staff should comprise at least 50 percent of office personnel,
  - Maintenance of a dedicated local office,
  - Registration with the appropriate local authorities,
  - A local bank account, and
  - A portfolio of locally-implemented programs.
  
- Have demonstrated links to the local community, including:
  - If the organization has a governing body or board of directors, then it must include a majority of local citizens;
  - A letter of support from a local organization to attest to its work; and
  - Other criteria that an organization proposes to demonstrate its local roots.

**(Chapters 201 and [303](#))**

### **Logic Model**

A graphic or visual depiction of a theory of change, illustrating the connection between what the project will do and what it hopes to achieve. There are a wide range of logic models, including but not limited to LogFrames, causal loop diagrams, stakeholder-based models, and Results Frameworks. **(Chapter 201)**

**Mechanism** (See “**Implementing Mechanism**” below)

### **Memorandum of Understanding (MOU)**

A document that sets forth a set of intentions between participants, generally designed as non-binding instruments that establish political (not legal) commitments. **(Chapter 201)**

### **Mission Resource Request (MRR) (previously MSRP)**

A country-specific document prepared by a field Operating Unit under the guidance of the U.S. Ambassador, focused on resources required to implement the strategies

*Text highlighted in yellow indicates that the material is new or substantively revised.*

outlined in Bureau- and country-level multi-year strategies that does not duplicate the strategy components previously included in the MSRP. **(Chapter 201)**

### **Monitoring**

The ongoing and systematic tracking of data or information relevant to USAID's **policies, operations, programs**, Strategies, projects, and activities. Relevant data and informational needs are identified during planning and design and can include output and outcome measures directly attributable to or affected by USAID-funded interventions, as well as measures of the operating context and programmatic assumptions. **(Chapter 201)**

### **Monitoring, Evaluation, and Learning (MEL) Plan**

A plan for monitoring, evaluating, and learning **typically focused on the activity level**. It is distinct from Mission-wide Performance-Management Plans (PMP). **(Chapter 201)**

### **Mortgage**

The difference between the total authorized level of funding and the cumulative total amount of funds obligated to a particular activity. **(Chapter 201, 602)**

### **National Security Strategy (NSS)**

An overarching U.S. Government policy document that covers the national-security principles that underlie U.S. foreign policy. As published in December 2017, its main themes include promoting the security of the United States, its citizens, and U.S. allies and partners; a strong and growing U.S. economy in an open international economic system that promotes opportunity and prosperity; respect for universal values at home and around the world; and an international order advanced by U.S. leadership. Objectives of development assistance are central to the document, which was prepared by the National Security Council. **(Chapter 201)**

### **Non-Permissive Environment (NPE)**

A "non-permissive" environment refers to an environment or context (at the national and/or sub-national level) characterized by uncertainty, instability, inaccessibility and/or insecurity, and in which USAID's ability to safely and effectively operate is constrained. Factors that may contribute to a "non-permissive" environment include the following:

- Armed conflict to which the U.S. is a party or not a party;
- Limited physical access due to distance, disaster, geography, or non-presence;
- Restricted political space due to repression of political activity and expression; and/or
- Uncontrolled criminality, including corruption. **(Chapter 201)**

### **Non-Required Evaluation**

*Text highlighted in yellow indicates that the material is new or substantively revised.*

An evaluation whose completion does not fulfill an evaluation requirement. Missions may conduct non-required evaluations for learning or management purposes, at any point in implementation of activities, projects, or programs. As evaluations, they still must meet all procedural, reporting, and quality standards stipulated in ADS Chapter 201. Non-required evaluations may be impact or performance, internal, or external. **(Chapter 201)**

### **Obligating Officials**

USAID officials with the delegated authority to sign obligating documents, including, but not limited to, the authority to negotiate, execute, amend, deobligate, manage close-out activities, maintain obligation files, record obligations in the Global Acquisition and Assistance System (GLAAS), and administer agreements or awards that obligate USAID funds. An Obligating Official may be a CO/AO, Executive Officer, Assistant Administrator, Deputy Assistant Administrator, Mission Director, or other Agency official. **(Chapters 201, 603, 621, 631, 634)**

### **Obligation**

A term of appropriations law that means some action that creates a definite commitment, or that creates a legal liability of the U.S. Government for the payment of funds for specific goods or services ordered or received. **(Chapter 201, 621)**

### **Operating Expense (OE)**

Costs related to personnel, other administration costs, rental, and depreciation of fixed assets. **(Chapter 201)**

### **Operating Unit (OU)**

The organizational unit responsible for implementing a foreign assistance program for one or more elements of the Department of State's Foreign Assistance Framework. The definition includes all U.S. Government Departments and Agencies that are implementing any funding from the relevant foreign-assistance accounts (the 150 accounts). For USAID, it includes field Missions and regional entities, as well as Regional Bureaus, Technical Bureaus, and Independent Offices in USAID/Washington that expend program funds to achieve DOs identified in a CDCS. Chapter 201 refers to field OUs as "Missions," and those in Washington as "Washington OUs." **(Chapter 201)**

### **Operational Plan (OP)**

Provides details on the use of foreign-assistance funding for a specific Fiscal Year. It identifies where, and on what, programs funds will be spent, which U.S. Government Departments and Agencies will manage the funds, and who will implement the programs. A primary objective of the OP is to ensure coordinated, efficient, and effective use of all U.S. Government foreign-assistance resources in support of American foreign-policy priorities. **(Chapter 201)**

### **Operations Policy**

*Text highlighted in yellow indicates that the material is new or substantively revised.*

Program procedures, rules, and regulations that affect the management of USAID’s internal systems, including budget, financial-management, personnel, procurement, and program operations. (**Chapter 201**)

### **Outcome**

The conditions of people, systems, or institutions that indicate progress or lack of progress toward achievement of project/program goals. Outcomes are any result higher than an output to which a given output contributes, but for which it might not be solely responsible. Outcomes can be intermediate or end outcomes, short-term or long-term, intended or unintended, positive or negative, direct or indirect. (**Chapter 201**)

### **Outcome Evaluation**

A type of performance evaluation that can help answer the question, "Were the intended outcomes of the program, policy, or organization achieved?"; however, unlike an impact evaluation, it typically cannot discern causal attribution. (**Chapter 201**)

### **Output**

The tangible, immediate, and intended products or consequences of an activity within USAID’s control or influence; the direct result of inputs. (**Chapter 201**)

### **Partner**

An organization or individual with which/whom the Agency collaborates to achieve mutually agreed-upon objectives and secure the participation of ultimate customers. Partners can include host-country governments, private voluntary organizations, host-country and international NGOs, universities, other U.S. Government Departments and Agencies, United Nations and other multilateral organizations, professional and business associations, and private businesses and individuals. (**Chapter 201**)

### **Partner Country (also known as “Host Country”)**

The country in which a USAID-funded activity takes place. (**Chapter 201**)

### **Pause and Reflect**

A component of learning and adaptive management, the act of taking time to think critically about ongoing activities and processes and to plan for the best way forward. (**Chapter 201**)

### **Performance Evaluation (See “Evaluation,” “Impact Evaluation” above)**

Evaluations that encompass a broad range of methods and often incorporate before-after comparisons but generally lack a rigorously defined counterfactual. Performance evaluations can focus on what a particular project or program has achieved (at any point during or after implementation); how it was implemented; how it was perceived and valued; and other questions that are pertinent to design, management, and operational decision making. (**Chapter 201**)

### **Performance Indicator**

*Text highlighted in yellow indicates that the material is new or substantively revised.*

Means to monitor the expected outputs and outcomes of strategies, projects, or activities based on a Mission's RF or a project's or activity's logic model. Performance indicators are the basis for observing progress and measuring actual results compared to expected results. Performance indicators help answer the extent to which a Mission or Washington OU is progressing toward its objective(s), but alone cannot tell a Mission or Washington OU why such progress is or is not being made. **(Chapter 201)**

### **Performance Management**

The systematic process of planning and defining a theory of change and associated results through strategic planning and program design, and collecting, analyzing, and using information and data from program-monitoring, evaluations, and other learning activities to address learning priorities, understand progress toward results, influence decision-making and adaptive management, and ultimately improve development outcomes. A Mission's Performance Management Plan (PMP) describes performance-management activities at the Mission level. Performance-management supports continuous learning and adaptive management. **(Chapter 201)**

### **Performance Management Plan (PMP)**

A Mission-wide tool to plan and manage the process of identifying and addressing strategic learning priorities through monitoring, evaluation, and CLA activities and approaches, including by validating theories of change; monitoring progress and performance; tracking programmatic assumptions and changes in operational context; evaluating performance and impact; and using other learning activities to convene key stakeholders to learn from evidence and inform decision-making, resource-allocation, and adaptation at the strategy level. PMPs are Mission documents and are distinct from Activity MEL Plans. **(Chapter 201)**

### **Performance Monitoring**

The ongoing and systematic collection throughout Strategies, projects, and activities of performance-indicator data and other quantitative or qualitative information to reveal whether implementation is on track and whether expected results are being achieved. Performance-monitoring includes monitoring the quantity, quality, and timeliness of activity outputs within the control of USAID or its implementers, as well as the monitoring of project and strategic outcomes expected to result from the combination of these outputs and other factors. **(Chapter 201)**

### **Performance Plan and Report (PPR)**

Documents U.S. Government foreign-assistance results achieved over the past Fiscal Year and sets targets on designated performance indicators for the next two Fiscal Years. **(Chapter 201)**

### **Pillar Bureau (also known as a Technical Bureau)**

A Washington OU that provides leadership and innovation in its respective field. The Pillar Bureaus are Economic Growth, Education, and Environment (E3), soon to be Development, Democracy, and Innovation (DDI); Humanitarian Assistance (BHA);

*Text highlighted in yellow indicates that the material is new or substantively revised.*

Resilience and Food Security (RFS); Conflict Prevention and Stabilization (CPS); and Global Health (GH). Pillar Bureaus concentrate on programmatic activities that support USAID's Operating Units (OUs) in the field (see [ADS 200](#)). (Chapter 201)

### **Pipeline**

The difference between the total amount obligated in an award or agreement and the total expenditures against that award or agreement. (Chapter 201)

### **Planner**

The designated person responsible for developing and maintaining a written Individual Acquisition Plan (IAP) or for the planning function in those acquisitions (Part 7.101 of the Federal Acquisition Regulation [FAR]) or assistance actions that do not require a written plan. The Planner could be the Project Design Team Leader or Project Manager or his or her designee, such as the intended COR/AOR, who will work with the CO/AO in carrying out the planning function. OUs must ensure to identify a Planner or a particular procurement. Although OUs have the discretion to determine the appropriate individual based on the organizational structure and functions of the unit, the Planner must be an individual with sufficient authority in the OU to ensure that planning complies with this chapter, the FAR's acquisition-planning requirements, and Office of Management and Budget Policy Letter 11-01 (see [ADS 300](#)). (Chapter 201)

### **Politically Sensitive Country**

Generally defined as a country in which the internationally-recognized government:

- Is politically repressive; and
- Has explicitly rejected USAID assistance, or has such an adverse relationship with the United States that the Agency cannot partner or cooperate with the government on development assistance. (Chapter 201)

### **Portfolio Review**

A periodic review of designated aspects of a USAID Mission or Washington OU's Strategy, projects, or activities, respectively. (Chapter 201)

### **Pre-Obligation Requirement**

A mandatory provision that must be met prior to obligation of funds. These items include a wide range of legal, policy, financial, and instrument-specific provisions. For Missions that have DOAGs with their partner government, obligations into activity-level agreements are often sub-obligations under a DOAG. (Chapter 201)

### **Pre-Procurement Action Lead Time (PALT)**

A period of time that begins at design initiation and ends at activity approval and submission of the GLAAS requisition. (Chapter 201)

*Text highlighted in yellow indicates that the material is new or substantively revised.*

### **Process (or Implementation) Evaluation**

A type of performance evaluation that assesses how the program or service is delivered relative to its intended theory of change, and often includes information on content, quantity, quality, and structure of services provided. These evaluations can help answer the question, "Was the program, policy, or organization implemented as intended?" or "How is the program, policy, or organization operating in practice?" (Chapter 201)

### **Program**

Within the context of the Program Cycle, "program" usually refers to either a Mission's entire portfolio, or to an entire technical sector portfolio, under a CDCS. For Washington OUs and other OUs that do not have a CDCS, program generally refers to a set of projects or activities that support a higher-level objective or goal. (Chapter 201)

### **Program Area**

One of the several categories in the Foreign Assistance Standardized Program Structure that identify broad programmatic interventions (such as Counter Narcotics, Health, or Private Sector Competitiveness), primarily used for budget planning and tracking. More than one appropriation account can fund a Program Area. (Chapter 201)

### **Program Assistance**

A generalized resource transfer, in the form of foreign exchange or commodities, to the recipient government based on meeting defined benchmarks or performance indicators that are not based on cost, in contrast to other types of assistance in which USAID finances specific inputs, such as technical assistance, training, equipment, vehicles, or capital construction. Program Assistance also has been known historically as "Non-Project Assistance." (Chapter 201)

### **Program Cycle**

The Program Cycle is USAID's operational model for planning, delivering, assessing, and adapting development programming in a given region or country to advance U.S. foreign policy. It encompasses guidance and procedures for: 1) making strategic decisions at the regional or country level about programmatic areas of focus and associated resources; 2) designing projects and activities to implement strategic plans; and 3) learning from performance-monitoring, evaluations, and other relevant sources of information to make course corrections and inform future programming, as needed. (Chapter 201)

### **Program Element**

Categories in the Foreign Assistance Standardized Program Structure that reflect the different components of a program area, primarily used for budget planning and tracking. Examples would be Alternative Development and Alternative Livelihoods within Counter Narcotics, HIV/AIDS within Health, and Business Enabling Environment within Private-Sector Competitiveness. (Chapter 201)

*Text highlighted in yellow indicates that the material is new or substantively revised.*

**Program Sub-Element**

Categories in the Foreign Assistance Standardized Program Structure that reflect the different components of a program element, primarily used for budget planning and tracking. An example would be Farmer/Community Group Support within Alternative Development and Alternative Livelihoods, Preventing Mother-to-Child Transmission within HIV/AIDS, or Property Rights within Business Enabling Environment. **(Chapter 201)**

**Project**

A group of activities designed and managed in a coordinated way to advance result(s) set forth in a CDCS (or other strategic framework) and ultimately foster lasting gains along the Journey to Self-Reliance in a country or region. Through a project approach, Missions and other OUs can create synergies among complementary activities that generate higher-level results than can be achieved through the sum of their individual performances. **(Chapter 201)**

**Project Design**

A process undertaken by a designated Project Design Team to define a project's boundaries, a high-level theory of change, and an adaptable plan for implementation, which results in a Project Development Document. **(Chapter 201)**

**Project Development Document (PDD)**

A short document (generally not more than 15 pages) that summarizes key decisions made during a voluntary project-design process, and during implementation thereafter. The PDD is not intended to be a comprehensive plan or an exhaustive description of all design considerations; it is a management tool for facilitating an ongoing process of decision-making. **(Chapter 201)**

**Project Manager**

A designated individual who is responsible for providing overall guidance and direction at the project level during project implementation. The Project Manager may be an Office Director, Team Leader, or COR/AOR, among other options. As this is a function in the Mission, rather than a formal position in the Mission's staffing pattern, the designated Project Manager might or might not have formal supervisory authorities over technical staff. **(Chapter 201)**

**Project Purpose**

The highest-level result a project should achieve. The Project Purpose must support the Mission's CDCS Results Framework and be defined at a level of ambition that is manageable and judged to be attainable given the Mission's resources, staff, and influence. **(Chapter 201)**

**Public Financial Management Risk Assessment Framework (PFMRAF)**

*Text highlighted in yellow indicates that the material is new or substantively revised.*

USAID’s risk-management process to identify, mitigate, and manage the fiduciary risks encountered when considering Government-to-Government (G2G) assistance. It focuses on fiduciary risks to which U.S. Government funds may be exposed when administered directly by the public financial-management (PFM) systems of the individual entities intended to implement G2G-funded activities. PFM assessments of individual entities must include all systems that might be used in implementing an individual project (see [ADS 220](#)). (**Chapter 201**)

### **Quasi-Experimental Design (of an evaluation)**

Impact-evaluation designs used to attribute impact in the absence of a control group from an experimental design. Rather than a randomized control group, the evaluation generates a comparison group through rigorous statistical procedures, such as propensity-score matching, regression discontinuity, or analysis with instrumental variables. (**Chapter 201**)

### **Regional Development Cooperation Strategy (RDCS)**

A strategy similar to a CDCS for a regional platform or program. (**Chapter 201**)

### **Required Evaluation**

An evaluation whose completion fulfills a requirement; it must be external and managed, in most cases, by Program Office staff. (**Chapter 201**)

### **Result**

A significant and intended change in a development condition that affects people, systems, or institutions. Results are outputs and outcomes, including the DOs, Intermediate Result (IRs), sub-Intermediate Result (sub-IRs), Project Purpose, and project outcomes, as specified in a Mission’s CDCS or project logic model. (**Chapter 201**)

### **Results Framework (RF)**

The predominant logic model for representing the development hypotheses that underlie the Mission’s strategy. The RF diagrams the development hypotheses, and outlines the logic for achieving DOs over time, including causal logic (at levels up to IRs) and contribution between IRs and DOs, and between DOs and Goals. The RF includes the CDCS Goal, DOs, IRs, and sub-IRs. (**Chapter 201**)

### **Risk**

The effect of uncertainty on objectives (see [596mab](#)). Within the Program Cycle, a risk refers to an uncertain event or circumstance that—if it occurred—would affect an OU’s ability to achieve intended results, positively or negatively. (**Chapter 201**)

### **Risk Appetite**

The broad-based amount of risk an organization is willing to accept in pursuit of its mission/vision. (**Chapters 201, [596mab](#)**)

*Text highlighted in yellow indicates that the material is new or substantively revised.*

**Risk Assessment**

The identification and analysis of risks to the achievement of strategic, program, and operational objectives, which forms a basis for determining how OUs should manage risks. Risk-assessment involves estimating the significance and likelihood of a risk, as well as any controls or other measures that mitigate or eliminate that risk. (Chapters 201, [596mab](#))

**Risk Profile**

A document that provides thoughtful analysis of the risks an Agency faces toward achieving its strategic objectives that arise from its activities and operations, and appropriate options for addressing significant risks. (Chapters 201, [596mab](#))

**Risk Tolerance**

The acceptable level of variance in performance relative to the achievement of objectives, with special consideration to the relative importance of related objectives. Risk tolerance must align with risk appetite. (Chapters 201, [596mab](#))

**Self-Reliance**

A country's capacity to plan, finance, and implement solutions to local development challenges, as well as its commitment to see these through effectively, inclusively, and with accountability. (Chapter 201)

**Sex**

A biological construct that defines males and females according to physical characteristics and reproductive capabilities. For monitoring and reporting purposes, USAID disaggregates data by sex, not by gender. Gender and sex are not synonyms. (Chapter 201)

**Stakeholders**

Those affected positively or negatively by a development outcome or have an interest in or can influence a development outcome. (Chapter 201)

**Standalone Activity**

An activity not bundled with other activities under a project approach. In Missions, standalone activities should support result(s) set forth in a CDCS. (Chapter 201)

**Stocktaking**

A structured review and assessment of ongoing efforts and options going forward; for example, a mid-course CDCS stocktaking exercise. (Chapter 201)

**Strategic Planning**

The process by which USAID defines its objectives for development in a country or region and maximizes the impact of development cooperation (including, as appropriate, cooperation with partner governments, partner country/regional stakeholders, other donors, and the interagency). USAID's strategic planning advances

*Text highlighted in yellow indicates that the material is new or substantively revised.*

overall U.S. Government efforts to ensure the strategic use of resources. (**Chapter 201**)

### **Sub-Intermediate Result (Sub-IR)**

Results necessary for achieving an IR. (**Chapter 201**)

### **Sub-Obligation**

Expenditures of funds from a prior obligation of funds; they take place when an obligating official enters into a binding activity-level agreement under a DOAG by using funds obligated into the DOAG. A sub-obligation leads to the final disbursement of these Federal funds. (**Chapters 201**)

### **Support Objective**

Reflects the technical and management assistance that the regional platform/Mission might provide to bilateral Missions and to non-presence programs within its region. Regional platforms/Missions may include a Support Objective for the provision of services, if appropriate. A bilateral Mission or a Washington-based OU also may manage a Support Objective. (**Chapter 201**)

### **Sustainability**

The ability of a local system, network, or institutions to produce desired outcomes over time. Programs contribute to sustainability when they strengthen the ability to produce valued results and to be both resilient and adaptive in the face of changing circumstances. (**Chapter 201**)

### **Target**

Specific, planned level of result to achieve within a specific timeframe with a given level of resource. (**Chapter 201**)

### **Total Estimated Amount (TEA)**

The total authorized level of funding under an assistance award/agreement. (**Chapter 201**)

### **Total Estimated Cost (TEC)**

The total authorized level of funding under an acquisition award/agreement. (**Chapter 201**)

### **Theory of Change**

A narrative description, usually accompanied by a graphic or visual depiction, that describes how and why a purpose or result is expected to be achieved in a particular context. (**Chapter 201**)

### **Transition Planning**

A legislatively mandated section of the CDCS to determine the proposed trajectory for USAID's assistance in country, including by identifying the conditions under which

*Text highlighted in yellow indicates that the material is new or substantively revised.*

USAID's assistance will no longer be needed, benchmarks toward achievement of those conditions, and options for transition once those conditions are met. (**Chapter 201**)

201\_120820

*Text highlighted in yellow indicates that the material is new or substantively revised.*
